have successfully completed their secondary studies. These provide arts education, technical training or higher teacher training (i.e. for secondary school).

In 1975/76 there were 959,015 in primary school, 861,738 in secondary schools and 101,933 in higher education.

The National Study Fund provides grants where necessary and nearly 35 per cent of students are receiving scholarships. Annual educational expenditure amounts to over 20 per cent of the total budget. Since the reforms of 1970, separate Ministers of Education have been responsible for the French and Dutch-speaking regions.

Tourism

There are towns of rich historic and cultural interest such as Bruges, Ghent, and Antwerp. Ostend and other seaside towns attract many visitors. The forest-covered Ardennes region is excellent hill-walking country.

THE CONSTITUTION

The Belgian Constitution has been considerably modified by amendment since its origin in 1831. Belgium is a constitutional monarchy. The central legislature consists of a Chamber of Representatives, and a Senate. The Chamber of Representatives consists of 212 members, who are elected for four years unless the Chamber is dissolved before that time has elapsed. Belgium entered 1971 with a rewritten Constitution, differing from its predecessor mainly in its treatment of the two cultural entities. Since then all Belgians have been officially recognized as either Flemings or Walloons, and each community has regional powers in cultural and economic affairs. Before this there had been juridical recognition of the separate, bilingual status of Brussels, and provision made for the creation of regional political organs for Brussels, Flanders and Wallonia.

ELECTORAL SYSTEM

Members must be twenty-five years of age, and they are elected by secret ballot according to the system of Pro-

portional Representation. Suffrage is universal for citizens of twenty-one years or over, and voting is compulsory.

The Senate, or Second Chamber, is chosen in the following manner. It is composed of:

(1) Half as many members as the Chamber of Representatives, elected directly by the same electors.

(2) Members chosen by the Provincial Councillors, in the proportion of one for every 200,000 population.

(3) Members co-opted by groups (1) and (2), up to half the number of group (2).

There are now 181 Senators.

All Senators must be over 40, with the exception of a small number of members of the Royal Family, who become Senators by right at the age of 18. Members are elected for four years.

THE CROWN

The King has the right to veto legislation, but he does not exercise it. Though he is supreme Head of the Executive, he in fact exercises his control through the Cabinet.

which is responsible for all acts of government to the Chamber of Representatives. Though the King, according to the Constitution, appoints his own ministers, in practice, since they are responsible to the Chamber of Representatives and need its confidence, they are generally the choice of the Representatives. Similarly, the Royal initiative is in the hands of the ministry.

LEGISLATION

Legislation is introduced either by the Government or the members in the two Houses, and as the party complexion of both Houses is generally almost the same, measures passed by the Chamber of Representatives are usually passed by the Senate. Each House elects its own President at the beginning of the session, who acts as an impartial Speaker, although he is a party nominee. The Houses elect their own committees, through which all legislation passes. They are so well organized that through them the Legislature has considerable power of control over the Cabinet. Nevertheless, according to the Constitution (Art. 68), certain treaties must be communicated to the Chamber

only as soon as the "interest and safety of the State permit". Further, the Government possesses an important power of dissolution which it uses; a most unusual feature is that it may be applied to either House separately or to both together (Art. 71).

Revision of the Constitution is to be first settled by an ordinary majority vote of both Houses, specifying the article to be amended. The Houses are then automatically dissolved. The new Chambers then determine the amendments to be made, with the provision that in each House the presence of two-thirds of the members is necessary for a quorum, and a two-third majority of those voting is required.

LOCAL ADMINISTRATION

The system of *local* government conforms to the general European practice of being based on a combination of central officials as the executive agent and locally elected councillors as the deliberating body. The areas are the provinces and the communes, and the latter are empowered by Art. 108 of the Constitution to associate for the purposes of better government.

JUDICIAL SYSTEM

The independence of the judiciary is based on the constitutional division of power between the legislative, executive and judicial bodies, each of which acts independently. Judges are appointed by the Crown for life, and cannot be removed except by judicial sentence. The law of 1967, in force since 1970, unified civil procedure in the district courts, and reorganized the courts' areas of competence. Each of Belgium's nine provinces is divided into judicial districts. The judiciary is organized on four levels, from the judicial canton to the district, regional and national courts. The lowest courts are those of the *Justices of the Peace*, of which there are 222, and the *Police Tribunals* (20); each type of district court numbers 26, 1 in each canton, including the *Tribunals of the First Instance*, *Tribunals of Commerce*, and *Labour Tribunals*. There are 3 regional *Courts of Appeal*, 3 regional *Labour Courts*, and 1 *Court of Assizes* in each province. The highest courts are the 3 civil and criminal *Courts of Appeal* and the supreme *Court of Cassation*. The *Military Court* is in Brussels.

THE PRESS

Article Eighteen of the Belgian constitution states: "The Press is free; no form of censorship may ever be instituted; no cautionary deposit may be demanded from writers, publishers or printers. When the author is known and is resident in Belgium, the publisher, printer or distributor may not be prosecuted."

There are 42 general information dailies, 21 of which are autonomous, the remainder depending largely or totally on the former (some are only, under a different title, regional editions of a larger paper).

Of the dailies, 26 are in French, 15 in Dutch and one is in German. Seven deal with economic and financial matters, and two are devoted to sport. There is a trend towards concentration. The "Le Soir" group now consists of six dailies with a total circulation of 531,135 copies. The only other significant group consists of five Catholic papers, with 314,692 total circulation, linked with *De Standaard*.

Most of the important newspapers are family concerns, and family interests predominate even when newspapers have multiple ownership. Examples of family ownership of major papers are as follows: *Le Soir* (Rossel), *Het Laatste Nieuws* (Hoste), *La Libre Belgique* (Jourdain), *La Dernière Heure* (Brébart), *Het Belang van Limburg* (Theelen).

It should also be mentioned that *Le Peuple* and *De Volksgazet* are semi-official organs of the Belgian Socialist Party. *Het Volk* and *La Cité* are published by the Christian Workers Movement. There are few official political organs.

Nearly all the Belgian dailies have political leanings and are divided between the three traditional parties: Social Christian Party, Belgian Socialist Party, Freedom and Progress Party. It is not, however, possible to establish a parallel between the supporters of the parties and the readership of the dailies. For example, the readers of the Socialist newspapers are far fewer than those who vote for that party, and though *Le Soir* claims its neutrality with regard to the parties, it nevertheless adopts a decided viewpoint in many cases.

Although there is no easy division of the daily papers into popular and serious press, most papers strive to give a serious news coverage. The widest circulating dailies in French are: *Le Soir* (234,371), *La Meuse/La Lanterne* (185,324), *La Libre Belgique* (140,000) and *La Dernière Heure* (140,000); and in Dutch: *Het Laatste Nieuws* (201,000), *De Standaard* (314,692), *Het Volk* (216,588), and *Gazet van Antwerpen* (202,676). The major weeklies include *Panorama Ons Land* (187,000) and *Le Soir Illustré* (107,236), the latter associated with the daily *Le Soir*; and the cultural periodicals *Pourquoi Pas?* (87,000) and *Kunst* (70,000). The popular women's periodical *Femmes*

d'Aujourd'hui (202,992) has the distinction of considerable sales in France. Some periodicals are printed in French and in Dutch.

BULGARIA

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The People's Republic of Bulgaria, in the eastern Balkans, is bounded to the north by Romania and to the east by the Black Sea. Turkey and Greece lie to the south and Yugoslavia to the west. The climate is one of fairly sharp contrasts between winter and summer. The language is Bulgarian, a branch of the Slavonic group, written in the Cyrillic alphabet. Most people adhere to the Bulgarian Orthodox Church and there is a substantial minority of Muslims. The national flag (proportions 3 by 2) has three horizontal stripes of white, green and crimson, with the white uppermost; in the top left-hand corner is the state emblem, surmounted by a five-pointed red star. The capital is Sofia.

Recent History

The Fatherland Front, a left-wing alliance formed in 1942, seized power with help from the Soviet Union in 1944 and set up a government under Kimon Georgiev. The constitutional monarchy formally ended when Bulgaria was declared a republic in 1946, and in elections soon after Georgi Dimitrov became both Prime Minister and First Secretary of the Communist Party in a government formed from members of the Communist-dominated Fatherland Front. All opposition parties were abolished and a new constitution based on the Soviet model was adopted. On his death in 1949, Dimitrov was succeeded by Vassil Kolarov as Prime Minister in the same year and as First Secretary in 1950. Kolarov died in 1950 and was succeeded by Vulko Chervenkov. The political trials and executions which were common during this period and into the fifties became less frequent after the death of Stalin, and rehabilitation of those who had been disgraced began in 1956.

Todor Zhivkov became First Secretary in 1954 and, following an ideological struggle within the Communist Party, succeeded Anton Yugov as Prime Minister in 1962. In 1965 a coup against the Government failed. When a new constitution was adopted in May 1971, Zhivkov relinquished his position as Prime Minister to become the first Chairman of the newly formed State Council. This move strengthened his position at the head of the Government. He was re-elected in 1976. In May 1977 Boris Velchev, a Secretary of the Central Committee since 1959, was dismissed from all his posts within the Party.

Relations with Western states have improved and since 1971 there has been increased co-operation with Greece in economic and technical fields. Concessions for the use of Greek ports by Bulgarian ships have been granted. Disagreements have arisen between Bulgaria and Yugoslavia over the Macedonian question. In 1976 Bulgaria determined to seek an even closer association with the U.S.S.R.

Government

Under the 1971 constitution, the supreme organ of state power is the unicameral National Assembly, with 400 members elected for five years by universal adult suffrage in single-member constituencies. The Assembly elects the State Council (27 members were elected in June 1976) to

be its permanent organ. The Council of Ministers, the highest organ of state administration, is elected by (and responsible to) the Assembly.

Political power is held by the Bulgarian Communist Party (BCP), which dominates the Fatherland Front. The Front presents an approved list of candidates for elections to all representative bodies (members of the National Assembly were elected unopposed in May 1976). The BCP's highest authority is the Party Congress, convened every five years. The Congress elects a Central Committee (154 members were elected in April 1976) to supervise Party work. To direct its policy, the Committee elects a Political Bureau (Politburo), with eight full members and six candidate members in 1977.

For local administration, Bulgaria comprises 27 provinces and three cities, each with a People's Council elected for two and a half years.

Defence

Bulgaria is a member of the Warsaw Pact. Military service is for two years in the army and air force, and three years in the navy. The total strength of the armed forces is 148,500, comprising an army of 115,000, air force 25,000 and navy 8,500. Para-military forces number 40,000, including 16,000 border troops, and there is a voluntary People's Militia of 150,000. The defence budget in 1976 totalled 645 million leva.

Economic Affairs

Bulgaria is a very fertile country and since the end of the Second World War its agriculture has been organized on a large-scale co-operative and mechanized basis. A reorganization into about 170 huge agro-industrial complexes has been carried out. About 30 per cent of the population are employed on the land, and wheat, maize, beet and barley are the chief crops. Agricultural production increased by 30 per cent between 1970 and 1976. Industry is publicly owned and manufactured goods account for 40 per cent of exports. Industrial output increased by 55 per cent between 1961 and 1976. Industry is now in the process of being reorganized into 95 massive combines, each controlling many related enterprises. Engineering, in particular, has been greatly developed, as have the chemical fertilizer and metallurgical industries. The 1976-80 Five-Year plan envisages a 55-60 per cent increase in industrial production, and a 20 per cent increase in agricultural produce, three-quarters of its budget being spent on further modernization and reconstruction of industry.

Bulgaria's first nuclear power station, constructed by Soviet engineers, was opened in September 1974. Coal, iron ore, copper, lead and zinc are mined and some oil is extracted on the Black Sea coast. Foreign trade is a state monopoly and 80 per cent is with the other COMECON countries, mainly the Soviet Union. Considerable tourist development has played an important part in alleviating Bulgaria's shortage of foreign exchange; in 1975 more than 4 million tourists visited the country.

During the 1971-75 period, Bulgaria's national income increased by 46 per cent, and investment rose by 6.5 per cent each year. Trade now accounts for 40 per cent of the gross national product. Since 1973 a new emphasis has been put on the production of consumer goods and improving the material conditions of Bulgarian workers.

Transport and Communications

Inland transport is by rail, road and waterway. There are 7,626 km. of railway track and 36,161 km. of roads; a major motorway has been constructed from Sofia to the coast. The Danube is the main waterway, the total tonnage of vessels sailing on it exceeding 227,000 tons. External services link Black Sea ports to Russia, the Mediterranean and West Europe. Balkan, the state airline, maintains services with East European capitals and other capitals in Europe and the Middle East.

Social Welfare

State social insurance is directed by the Department of Public Insurance and the Pensions Directorate. State insurance contributions are compulsory for all workers irrespective of the nature of their work but contribution payments, rights and benefits are scaled according to the following three categories: workers and employees, labour co-operative farmers, private craftsmen and private farmers. Insurance contributions are determined by the Council of Ministers. Depending on the category of worker, contributions are either paid by the enterprises, employers, etc., who in turn levy the employees and workers, or they are paid by the workers individually.

Insured persons are paid money compensation during the time of sick leave, the amount of compensation depending on the duration of uninterrupted years of service. Every woman who is insured is entitled to full paid leave for so many days before and after childbirth—the amount of leave allowed depending on the number of children in the family already, and the number of years the woman has been insured. In 1967 the Bulgarian government increased the size of grants paid to mothers of large families. Disablement and old age pensions are paid to those who have contributed to the insurance scheme. The amount of pension will vary according to the nature of work the disabled or retired person was formerly engaged in, his length of service and his age. In 1973 increased pensions for certain old and disabled persons were introduced, and the period of paid leave for women after childbirth was greatly extended.

Since 1951 all medical services and treatment have been free for the whole population, and these are provided for by the state medical authorities. All medical treatment establishments and medical schools, training colleges and research institutes are controlled by the Ministry of Public Health. Departments of Public Health in the Regional People's Councils actually supervise medical work together with the Bulgarian Red Cross.

Education

Education in Bulgaria is free and compulsory between the ages of seven and sixteen. It is administered by the Bulgarian Ministry of Education, although direct organ-

ization of kindergartens and schools is exercised by specialized organs of the people's councils.

Pre-school education is provided in the form of kindergartens, which are attended by 70 per cent of all children between the ages of three and seven. The compulsory eight-class schools provide a general education at primary and secondary levels and prepare students for graduation to higher institutions. It was estimated that 97.5 per cent of students graduating from the eighth class in 1974 proceeded to some form of higher education.

There are three types of school after basic school. The *gimnazia* provides a general education and completes the third stage of the "eleven-year school", the *tekhnikum* is a vocational school offering a general curriculum together with a course leading to vocational qualifications in various branches of industry, agriculture, etc. The third type of secondary school is the *profesionalno tehnikeshko uchilishte* (vocational technical school), which gives theoretical knowledge on a certain vocation with practical work in the appropriate enterprises and plants and in agriculture. About 80 per cent of the students who have completed their education at the elementary school continue their studies at *tekhnikum* (technical schools) and the vocational technical schools. In 1976/77 there were 145,539 pupils attending secondary vocational technical schools, and 129,934 pupils at secondary special and art schools.

Higher education in Bulgaria can be divided into two main categories, *Poluvvisshi instituti* and *Visshi uchebni zavedeniya*. *Poluvvisshi instituti* train teachers for elementary schools and some other specialists. The course lasts two to three years. There are over 23,000 students trained in them. *Visshi uchebni zavedeniya* are establishments of higher education. About 104,000 students study university courses in them.

Tourism

Black Sea resorts are very popular, visitors coming from the Soviet Union and East Europe. In 1962 the Government launched a campaign to attract tourists from the West and the number of visitors has since increased rapidly, reaching 4,033,404 in 1976.

Sport

Sport receives state encouragement, football being the most popular game.

Public Holidays

1978: May 1st, 2nd (Labour Days), May 24th (Education Day), September 9th, 10th (National Days), November 7th (Anniversary of Russia's October Revolution).

1979: January 1st, 2nd (New Year's Holiday).

Weights and Measures

The metric system is in force.

Currency and Exchange Rates

100 stotinki = 1 lev.

Exchange rates (October 1977):

£1 sterling = 1.70 leva;
U.S. \$1 = 96 stotinki.

FINANCE

100 stotinki = 1 lev.

Coins: 1 stotinka, 2, 5, 10, 20 and 50 stotinki; 1, 2 and 5 leva.

Notes: 1, 2, 5, 10 and 20 leva.

Exchange rates (October 1977): £1 sterling = 1.70 leva; U.S. \$1 = 96 stotinki.

100 leva = £58.70 = \$104.17.

Note: Between January 1962 and August 1971 the basic exchange rate was U.S. \$1 = 1.17 leva (1 lev = 85.47 U.S. cents). From December 1971 to February 1973 the rate was U.S. \$1 = 1.08 leva (1 lev = 92.59 U.S. cents). In March 1973 a new rate of U.S. \$1 = 97 stotinki was introduced but this has several times been revised. In terms of sterling, the basic rate between November 1967 and June 1972 was £1 = 2.808 leva.

THE CONSTITUTION

Bulgaria was formerly a monarchy, but on September 15th, 1946, King Simeon was deposed and Bulgaria was declared a Republic. The Constitution of 1947 was replaced by a new Constitution adopted by a referendum held on May 16th, 1971, and proclaimed by the Fifth National Assembly on May 18th. The following are its salient features:

The People's Republic of Bulgaria is a socialist state of the working people of towns and villages, headed by the working class. The Bulgarian Communist Party is the leading force in society and in the State. It guides the construction of a developed socialist society in the country in close fraternal co-operation with the Bulgarian Agrarian Union.

The State serves the people. It defends their interests and socialist acquisitions; directs the country's socio-economic development according to a plan; creates conditions for the constant improvement of the welfare, education and health services of the people, as well as for the all-round development of science and culture; ensures the free development of man, guarantees his rights and protects his dignity; organizes the defence of national independence, state sovereignty and the country's territorial integrity; develops and consolidates the friendship, co-operation and mutual assistance with the Union of the Soviet Socialist Republics and the other socialist countries; conducts a policy of peace and understanding with all countries and peoples.

In the People's Republic of Bulgaria all power comes from the people and belongs to the people. It is realized by the people through the freely elected representative organs—the National Assembly and the People's Councils—or directly. The representative organs are elected on the basis of a general, equal and direct right to vote by secret ballot.

All the citizens of the People's Republic of Bulgaria who are 18 years of age, irrespective of sex, nationality, race, religion, education, profession, official, public or property status, excluding those under restraint, are eligible to vote and to be elected.

The People's Republic of Bulgaria is governed strictly in accordance with the Constitution and the country's laws. It belongs to the world socialist community, which is one of the main conditions for its independence and all-round development.

SOCIAL-ECONOMIC ORGANIZATION

The economic system of the People's Republic of Bulgaria is socialist. It is based on public ownership of the means of production.

The forms of ownership are: state (all people's) ownership; co-operative ownership, ownership of public organizations, and personal ownership.

Plants and factories, banks, underground resources, the natural sources of power, nuclear energy, forests, pasture land, roads, railway, water and air transport, posts, telegraphs, telephones, the radio and television are state (all people's) property.

Co-operative property belongs to collective bodies of working people who have united of their own free will for the joint carrying out of economic activity, to co-operative unions and inter-co-operative organizations. The State fosters and aids the activity of co-operatives and of co-operative farms.

The property of public organizations serves for achieving

their goals, including the realization of the activities entrusted to them by state organs, and for meeting public interests.

The citizens of the People's Republic of Bulgaria have the right of personal ownership on real and movable property to meet personal needs and those of the family. The State protects the personal property, including savings, acquired by work or in some other lawful manner. Citizens cannot exercise their rights of personal ownership and their other property rights to the detriment of the public interest. The right to inherit is recognized and guaranteed.

The State directs the national economy and the other spheres of public life on the basis of unified plans for social-economic development.

Foreign trade is the exclusive right of the State.

Labour is a fundamental social-economic factor. The socialist principle "From everyone according to his abilities, to everyone according to his work" is applied in the People's Republic of Bulgaria. The protection of labour is dealt with by the law.

GOVERNMENT

THE NATIONAL ASSEMBLY

The National Assembly is the supreme representative organ which expresses the will of the people and their sovereignty. As a supreme organ of state power it combines the legislative and executive activities of the State and exercises supreme control. The term of its mandate is 5 years. It is composed of 400 people's representatives who are elected in constituencies with an equal number of inhabitants. The people's representatives are responsible and account to their electorate. They may be recalled before the expiry of the term for which they have been elected. Their recall is effected by decision of the electorate in a manner laid down by law. It is convened to sessions by the State Council at least three times a year.

The National Assembly is the only legislative organ of the People's Republic of Bulgaria and the supreme organizer of the planned management of social development. It realizes the supreme leadership of the home and foreign policy of the State; approves and amends the Constitution; determines which questions and in what manner should be decided by referendum; passes, amends and revokes laws; passes the unified plans for the social-economic development of the country and the reports for their fulfilment and the State budget and the report of the Government for its realization the preceding year; establishes taxes and fixes their rate; grants amnesty; decides the questions of declaring war and concluding peace; appoints and relieves of his duties the Commander-in-Chief of the Armed Forces; may set up state-public organs with the status of ministries; elects and relieves of their duties the State Council, the Council of Ministers, the Supreme Court and the Chief Prosecutor of the People's Republic; passes laws, decisions, declarations and appeals.

Legislative initiative belongs to the State Council, the Council of Ministers, the permanent commissions of the National Assembly, the people's representatives, the Supreme Court and the Chief Prosecutor. The right of legislative initiative belongs also to public organizations in the person of the National Council of the Fatherland Front, the Central Council of Bulgarian Trade Unions, the Central Committee of the Dimitrov Young Communist League and the Executive Council of the Central Co-operative Council on questions referring to their activity.

THE STATE COUNCIL

The State Council of the People's Republic of Bulgaria is a supreme permanent organ of state power which unites the taking of decisions with their realization. Being a supreme organ of the National Assembly, the State Council ensures the blending of legislative with executive activities. It is responsible for all its activities and reports on them to the National Assembly. At its first session the National Assembly elects a State Council from among the people's representatives by a majority of more than half the total number of deputies.

The powers of the State Council are in force until the newly elected National Assembly elects a State Council.

The State Council realizes the general leadership of the home and foreign policy of the State. It represents the People's Republic of Bulgaria in her international relations. The President of the State Council receives the credentials and letters of recall of foreign diplomatic representatives in the country.

The State Council appoints elections for a National Assembly and for people's councils; determines the date for holding a referendum when a decision has been passed by the National Assembly that a referendum should take place on a certain question and in a certain manner; convenes the National Assembly at sessions; issues decrees and other juridical acts on the basic questions arising from the laws and the decisions of the National Assembly; issues decrees also on questions of principle; in urgent cases by decree amends or amplifies individual provisions of the laws; carries out the general guidance of the country's defence and security; appoints and relieves of their duties the members of the State Defence Committee and of the supreme commanding staff of the Armed Forces; controls the activities of the Council of Ministers and of the heads of the Ministries and of the other Departments; at the proposal of the Chairman of the Council of Ministers relieves of their duties and appoints individual members of the Council of Ministers—it is the duty of the State Council to submit this decision to be approved at the next session of the National Assembly; issues decrees and passes decisions, appeals and declarations.

THE COUNCIL OF MINISTERS

The Council of Ministers (the Government) is a supreme executive and administrative organ of the State Power. The Council effects its activities under the leadership and control of the National Assembly, and—when the latter is not in session—under the leadership and control of the State Council.

The Council of Ministers is responsible for the conducting of the internal and external policy of the State. It exercises the right of legislative initiative and secures conditions for carrying through the rights and freedoms of citizens. It also ensures public order and the country's security. It is responsible for the general leadership of the Armed Forces and concludes international agreements. It directly guides, co-ordinates and controls the activities of the ministries and other departments. The Council organizes both the implementation of the acts of the National Assembly, and of the State Council. It guides and controls the activities of the executive committees of the people's councils. It adopts decrees, instructions and decisions.

LOCAL GOVERNMENT

The territory of the Republic is divided for administrative purposes into Municipalities and Counties, which are governed by Municipal and County People's Councils,

elected by the local population for a period of two and a half years. Their function is to implement all economic, social and cultural undertakings of local significance in conformity with the laws of the country. They prepare the economic plan and budget of the Municipality and the County within the framework of the State Economic Plan and the State Budget, and direct its execution. They are responsible for the correct administration of State property and economic enterprises in their areas, and for the maintenance of law and order. These councils report at least once a year to their electors on their activities.

JUSTICE

The judicial authorities apply the law. Justice is independent and subject only to the law. Lay judges (Assessors) also take part in the dispensation of justice. Judges of all ranks and assessors are elected except in special cases fixed by law. Supreme judicial control over every kind of court is exercised by the Supreme Court of the People's Republic, which is elected by the National Assembly for a term of five years.

Citizens whose rights have been violated by government organs may appeal against such violations before higher-ranking organs and courts, in accordance with the Law of Administrative Procedure, 1970.

The Chief Prosecutor, who is also elected by the National Assembly for five years, and is answerable to it alone, has supreme supervision over the correct observance of the law by Government organs, officials, and all citizens. It is his particular duty to attend to the prosecution and punishment of crimes which are detrimental to the national and economic interests of the Republic or affect its independence.

THE RIGHTS AND DUTIES OF CITIZENS

All citizens are equal before the law. No privileges or restrictions in rights based on nationality, origin, religion, sex, race, education or property are recognized. All preaching of racial, national or religious hatred is punishable by law.

Women have equal rights with men in all spheres, including equal pay for equal work. The State pays special attention to the needs of mothers and children. Marriage and the family are under State protection, although only civil marriage is legally valid. Children born out of wedlock have equal rights with legitimate offspring.

All citizens have the right to free medical treatment in hospitals.

Labour is recognized as the basic factor of public and economic life. All citizens have the right to work, and it is their duty to engage in socially useful labour, according to their abilities. Holidays, limited working hours, pensions and medical treatment are guaranteed.

All citizens have the right to free education, which is secular and democratic. Elementary education is compulsory. National minorities have the right to be educated in their own tongue, and to develop their national culture, although the study of Bulgarian is compulsory.

The Church is separate from the State. Citizens have freedom of religion and conscience. However, misuse of the Church and religion for political ends and the formation of religious organizations with a political basis is prohibited.

Citizens are guaranteed freedom of speech and of the Press, secrecy of correspondence, inviolability of persons and dwellings, and the right of meetings and rallies.

Military service is compulsory for all male citizens.

THE PRESS

As in most Communist countries, the press in Bulgaria is considered a powerful instrument of the Party and part of the educational system, and for that reason it is subject to strict control by the Government. It is largely dominated by the Communist Party and by organizations attached to the Fatherland Front, and much of its news originates from TASS, the Soviet news agency. Censorship is not usually necessary, since editors are Party members and aware of their responsibility to the Government.

There are 17 daily papers in Bulgaria, eight of which are published in Sofia, and their total circulation is 5,496,670 copies. The most important is *Rabotnichesko Delo* (circ. 850,000), the organ of the Communist Party. Other important newspapers are *Otechestven Front* (circ. 280,000), the Fatherland Front daily, and *Narodna Mladezh* (circ. 250,000), the youth newspaper.

CYPRUS

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Republic of Cyprus is an island in the eastern Mediterranean about 60 miles south of Turkey. Climate is mild though snow falls in the mountainous south-west between December and March. About 75 per cent of the people speak modern Greek and the remainder Turkish. The Greek-speaking community adhere to the Greek Orthodox Church while most of the Turks are Muslims. The national flag (proportions 3 by 2) is white with a gold map of Cyprus, garlanded by olive leaves, in the centre. The capital is Nicosia.

Recent History

A guerrilla war against British rule in Cyprus was begun in 1955 by Greek Cypriots seeking unification (*Enosis*) with Greece. Their movement, the National Organization of Cypriot Combatants (EOKA), was led politically by Archbishop Makarios III, head of the Greek Orthodox Church in Cyprus, and militarily by General George Grivas. After a compromise agreement between the Greek and Turkish communities, independence was achieved on August 16th, 1960, and Archbishop Makarios became the first President of the Republic. Cyprus joined the Commonwealth in March 1961.

Between 1960 and 1974 Cyprus suffered from a long series of disputes between the Greek and Turkish communities and between factions within the Greek community, stemming from the Greek desire for *Enosis*. In 1964 a UN peace-keeping force was established to keep Greeks and Turks apart, following serious inter-communal fighting. The effective exclusion of the Turks from political power led to the creation of separate administrative, judicial and legislative organs for the Turkish community. Relations between the two communities gradually improved, and in 1968 talks on the establishment of a more equitable constitutional arrangement began. These talks continued sporadically for six years, never producing an agreement, the Turks favouring some form of federation, the Greeks a unitary state. Each community received military aid from its mother country, and the Greek Cypriot National Guard was controlled by officers of the Greek army.

In 1971 General Grivas returned to Cyprus, revived EOKA, and began a terrorist campaign for *Enosis*, directed against the Makarios government and apparently supported by the military regime in Greece. Grivas died in January 1974, and in June, Makarios ordered a purge of EOKA sympathizers from the police, National Guard and civil service, accusing the Greek regime of subversion. The National Guard staged a coup and on July 15th appointed Nicos Sampson President. At the invitation of Rauf Denktaş, the Turkish Cypriot leader, the Turkish army intervened to protect the Turkish community and prevent Greece using its control of the National Guard to take over Cyprus.

The Turkish army rapidly occupied the northern third of Cyprus, and Sampson resigned. Makarios fled abroad and Glavcos Clerides became acting President. In December 1974 Makarios returned to Cyprus and resumed the

Presidency, but the Turkish Cypriots' effective control of northern Cyprus enabled them to establish a *de facto* government, and in February 1975 to declare the establishment of the "Turkish Federated State of Cyprus".

Negotiations between the two communities continued intermittently from 1975 to 1977, but by November 1977 they had made little progress towards a political settlement. The Turkish Cypriots proposed a Greek/Turkish bi-regional federation with strong regional governments while the Greeks favoured a multi-regional federation with strong central government.

The most pressing problem for the two communities was the mass of refugees. By the end of 1975 most of the Turkish Cypriots in the south had been resettled in the northern area. However, many Greeks displaced from their homes in the north remained unhoused in the south in 1977.

In August 1977 Archbishop Makarios died. Spyros Kyprianou, the President of the House of Representatives and Chairman of the Democratic Party, was elected unopposed to succeed him for the remainder of his term of office. New presidential elections were scheduled for February 1978.

Government

The 1960 Constitution provided for a system of government in which power would be shared by the Greek and Turkish communities in proportion to their numbers. Although this constitution remains in force, since the ending of Turkish participation in the government in 1963, and particularly since the creation of a separate Turkish area in northern Cyprus in 1974, each community has administered its own affairs, refusing to recognize the authority of the other's government. The Greek Cypriot administration claims to be the government of all Cyprus, and is generally recognized as such, although it has no Turkish participation. The northern area is under the *de facto* control of the "Turkish Federated State of Cyprus", for which a constitution was promulgated in June 1975. Each community has its own president, council of ministers, legislature and judicial system.

Defence

The National Guard was set up by the House of Representatives in 1964, after the withdrawal of the Turkish members. Men between the ages of 18 and 50 are liable to two years conscription. The National Guard has officers from Greece. The Turkish community has its own police force and the Fighter's Army on which it relies for protection. These forces are supported by a detachment of the Turkish army, estimated at 25,000 men in January 1977. Cyprus also contains the UN Peace-Keeping force of 2,720 (1977), and the British military bases at Akrotiri and Dhekelia.

Economic Affairs

The Cypriot economy was gravely disrupted by the events of 1974. The division of the island and the con-

tinuing loss of tourist revenue meant that the economy has since remained severely dislocated.

The economy is basically agricultural, the main crops being potatoes and citrus fruit. Before the economic disasters of 1974, agriculture employed 35 per cent of the working population (1972) and provided 49 per cent of exports (1973). Industry was growing rapidly but mining had been in decline for some years. A large trade deficit was covered by income from tourism, foreign military expenditure and remittances from Cypriot expatriates.

Through an intensive programme of reconstruction, the Government of Cyprus has had a great measure of success in restoring agricultural and industrial production in the southern half of the island. By 1976 production of most of the main crops had nearly regained pre-1974 levels. The potato crop was particularly successful and in 1976 was the largest export earner. The 1977 potato crop was also expected to be large.

Industry in the Greek-controlled area had recovered markedly by 1976. Exports of manufactured goods (including processed food products) amounted to C£38.3 million, compared with £14.9 million in 1973. Industrial expansion also resulted in a reduction in the high level of unemployment caused by the influx of refugees in 1974. In 1977 a second emergency plan (1977/78) was launched, aiming to increase the production of food and basic commodities and to achieve an average annual growth rate of 10.7 per cent in the manufacturing sector. In 1976 imports rose faster than exports and the trade deficit increased to C£71.4 million, compared with £58 million in 1975.

The Turkish Cypriots, aided by Turkey, have begun an extensive programme of reconstruction in the northern area. Their aim is to create a totally self-sufficient economy and much emphasis has been laid on the improvement of communications and essential services, and the restoration of the damaged citrus groves. In 1976 43,000 tons of citrus fruits were exported and total exports from the "Turkish Federated State of Cyprus" amounted to C£7 million.

Transport and Communications

There are no railways in Cyprus. Towns and villages are linked by asphalted roads with frequent bus services. The three main ports are Famagusta, Limassol and Larnaca which provide cargo and passenger services to Greek and other Mediterranean ports. The international airport at Nicosia was closed in July 1974 and a new airport was constructed at Larnaca by the Greek Cypriots. In 1975 the Turkish authorities opened Ercan (formerly Tymbou) airport. In 1977 a hydrofoil service was started between Kyrenia and Mersin on the Turkish mainland.

Social Welfare

A comprehensive social insurance scheme covering every working male and female and their dependants is in operation. It includes protection against arbitrary and unjustified dismissal, industrial welfare, and tripartite co-operation in the formulation and implementation of labour policies and objectives. Benefits and pensions from the social insurance scheme cover unemployment, sickness, maternity, widows, orphans, injury at work, old age and death.

Education

Greek Cypriot education, originally under the control of the Greek communal chamber, is now organized by the Ministry of Education. Elementary education is free and

compulsory for six years between the ages of six and 14. The first year of secondary education is free, and over 25 per cent of pupils are exempted from paying fees for the rest of their education. Secondary education is provided by trade schools, technical schools, the Gymnasium-Lykeion (classics, science and economics) and the Agricultural Gymnasium. Higher education for teachers, engineers, foresters, nurses and health inspectors is provided by technical and vocational colleges.

A similar system was maintained for Turkish Cypriots by the Turkish Education Office. The "Turkish Federated State of Cyprus" controls education in the Turkish area.

Tourism

Before the coup and Turkish intervention in July 1974, tourism was developing at a rapid rate. In 1973, nearly 265,000 tourists visited Cyprus. The tourist industry was severely disrupted by the invasion and in 1975 the number of tourists fell to 47,000. Revenue from tourism fell from Cyprus £24 million in 1973 to £14 million in 1974. However, the Government has made great efforts to restore the tourist industry and in 1976 180,200 tourists visited Cyprus.

Visas are not required for nationals of the following countries: Austria, Belgium, Denmark, Finland, France, Federal Republic of Germany, Greece, Iceland, Ireland, Italy, Japan, Liechtenstein, Luxembourg, The Netherlands, Norway, San Marino, Spain, Sweden, Switzerland, the United Kingdom and Commonwealth, the U.S.A., Yugoslavia.

Sport

Football, hockey, gymnastics and athletics are the most popular sports.

Weights and Measures

Although the imperial and the metric systems are understood, Cyprus has a special internal system:

Weight: 400 drams = 1 oke = 2.8 lb.

44 okes = 1 Cyprus kantar.

180 okes = 1 Aleppo kantar.

Capacity: 1 liquid oke = 1.125 quarts.

1 Cyprus litre = 2.5 quarts.

Length and Area: 1 pic = 2 feet.

Area: 1 donum = 14,400 sq. ft.

Currency and Exchange Rates

1,000 mils = 1 Cyprus pound.

Exchange rates (October 1977):

£1 sterling = 713.25 mils;

U.S. \$1 = 401.93 mils.

STATISTICAL SURVEY

Note: The figures in this survey have been provided by the Department of Statistics and Research at the Ministry of Finance in Nicosia. Since July 1974 the northern part of Cyprus has been under Turkish control, so some of the statistics relating to subsequent periods may not cover the whole island.

THE CONSTITUTION

The Constitution entered into force on August 16th, 1960, on which date Cyprus became an independent republic. In March 1961 Cyprus was accepted as a member of the Commonwealth.

ARTICLE 1

The State of Cyprus is an independent and sovereign Republic with a presidential regime, the President being Greek and the Vice-President being Turkish, elected by the Greek and the Turkish Communities of Cyprus respectively as hereinafter in this Constitution provided.

ARTICLES 2-5

The Greek Community comprises all citizens of the Republic who are of Greek origin and whose mother tongue is Greek or who share the Greek cultural traditions or who are members of the Greek Orthodox Church.

The Turkish Community comprises all citizens of the Republic who are of Turkish origin and whose mother tongue is Turkish or who share the Turkish cultural traditions or who are Moslems.

Citizens of the Republic who do not come within the above provisions shall, within three months of the date of the coming into operation of this Constitution, opt to belong to either the Greek or the Turkish Community as individuals, but, if they belong to a religious group, shall opt as a religious group and upon such option they shall be deemed to be members of such Community.

The official languages of the Republic are Greek and Turkish.

The Republic shall have its own flag of neutral design and colour, chosen jointly by the President and the Vice-President of the Republic.

The Greek and the Turkish Communities shall have the right to celebrate respectively the Greek and the Turkish national holidays.

ARTICLES 6-35

Fundamental Rights and Liberties

ARTICLES 36-53

President and Vice-President

The President of the Republic as Head of the State represents the Republic in all its official functions; signs the credentials of diplomatic envoys and receives the credentials of foreign diplomatic envoys; signs the credentials of delegates for the negotiation of international treaties, conventions or other agreements; signs the letter relating to the transmission of the instruments of ratification of any international treaties, conventions or agreements; confers the honours of the Republic.

The Vice-President of the Republic as Vice-Head of the State has the right to be present at all official functions; at the presentation of the credentials of foreign diplomatic envoys; to recommend to the President the conferment of honours on members of the Turkish Community which recommendation the President shall accept unless there are grave reasons to the contrary. The honours so conferred will be presented to the recipient by the Vice-President if he so desires.

The election of the President and the Vice-President of the Republic shall be direct, by universal suffrage and secret ballot, and shall, except in the case of a by-election, take place on the same day but separately.

The office of the President and of the Vice-President shall be incompatible with that of a Minister or of a Representative or of a member of a Communal Chamber or of a member of any municipal council including a Mayor or of a member of the armed or security forces of the Republic or with a public or municipal office.

The President and Vice-President of the Republic are invested by the House of Representatives.

The President and the Vice-President shall hold office for a period of five years.

The Executive power is ensured by the President and the Vice-President of the Republic.

The President and the Vice-President of the Republic in order to ensure the executive power shall have a Council of Ministers composed of seven Greek Ministers and three Turkish Ministers. The Ministers shall be designated respectively by the President and the Vice-President of the Republic who shall appoint them by an instrument signed by them both.

The decisions of the Council of Ministers shall be taken by an absolute majority and shall, unless the right of final veto or return is exercised by the President or the Vice-President of the Republic or both, be promulgated immediately by them.

The executive power exercised by the President and the Vice-President of the Republic conjointly consists of:

- Determining the design and colour of the flag.
- Creation or establishment of honours.
- Appointment of the members of the Council of Ministers.
- Promulgation by publication of the decisions of the Council of Ministers.
- Promulgation by publication of any law or decision passed by the House of Representatives.
- Appointments and termination of appointments as in Articles provided.
- Institution of compulsory military service.
- Reduction or increase of the security forces.
- Exercise of the prerogative of mercy in capital cases.
- Remission, suspension and commutation of sentences.
- Right of references to the Supreme Constitutional Court and publication of Court decisions.
- Address of messages to the House of Representatives.

The executive power exercised by the President consists of:

- Designation and termination of appointment of Greek Ministers.
- Convening and presiding of the meetings of the Council of Ministers.
- Right of final veto on Council decisions and on laws or decisions of the House of Representatives concerning foreign affairs, defence or security.
- Right of recourse to the Supreme Constitutional Court.
- Publication of the communal laws and decisions of the Greek Communal Chamber.
- Prerogative of mercy in capital cases.
- Addressing messages to the House of Representatives.

The executive power exercised by the Vice-President consists of:

- Designation and termination of appointment of Turkish Ministers.
- Asking the President for the convening of the Council of Ministers and being present and taking part in the discussions.
- Right of final veto on Council decisions and on laws or decisions of the House of Representatives concerning foreign affairs, defence or security.
- Right of recourse to the Supreme Constitutional Court.
- Publication of the communal laws and decisions of the Turkish Communal Chamber.
- Prerogative of mercy in capital cases.
- Addressing messages to the House of Representatives.

ARTICLES 54-60

Council of Ministers

The Council of Ministers shall exercise executive power in all matters, other than those which are within the competence of a Communal Chamber, including the following:

- General direction and control of the government of the Republic and the direction of general policy.
- Foreign affairs, defence and security.
- Co-ordination and supervision of all public services.
- Supervision and disposition of property belonging to the Republic.
- Consideration of Bills to be introduced to the House of Representatives by a Minister.
- Making of any order or regulation for the carrying into effect of any law as provided by such law.
- Consideration of the Budget of the Republic to be introduced to the House of Representatives.

ARTICLES 61-85

House of Representatives

The legislative power of the Republic shall be exercised by the House of Representatives in all matters except those expressly reserved to the Communal Chambers.

The number of Representatives shall be fifty:

Provided that such number may be altered by a resolution of the House of Representatives carried by a majority comprising two-thirds of the Representatives elected by the Greek Community and two-thirds of the Representatives elected by the Turkish Community.

Out of the number of Representatives 70 per cent shall be elected by the Greek Community and 30 per cent by the Turkish Community separately from amongst their members respectively, and, in the case of a contested election, by universal suffrage and by direct and secret ballot held on the same day.

The term of office of the House of Representatives shall be for a period of five years.

The President of the House of Representatives shall be a Greek, and shall be elected by the Representatives elected by the Greek Community, and the Vice-President shall be a Turk and shall be elected by the Representatives elected by the Turkish Community.

ARTICLES 86-111

Communal Chambers

The Greek and the Turkish Communities respectively shall elect from amongst their own members a Communal Chamber.

The Communal Chambers shall, in relation to their respective Community, have competence to exercise legislative power solely with regard to the following:

All religious, educational, cultural and teaching matters.

Personal status; composition and instances of courts dealing with civil disputes relating to personal status and to religious matters.

Imposition of personal taxes and fees on members of their respective Community in order to provide for their respective needs.

ARTICLES 112-121, 126-128

Officers of the Republic

ARTICLES 122-125

The Public Service

The public service shall be composed as to 70 per cent of Greeks and as to 30 per cent of Turks.

ARTICLES 129-132

The Forces of the Republic

The Republic shall have an army of two thousand men of whom 60 per cent shall be Greeks and 40 per cent shall be Turks.

The security forces of the Republic shall consist of the police and gendarmerie and shall have a contingent of two thousand men. The forces shall be composed as to 70 per cent of Greeks and as to 30 per cent of Turks.

ARTICLES 133-164

The Courts

(See section Judicial System)

ARTICLES 165-199

Financial, Miscellaneous, Final and Transitional Provisions

Note: The following measures have been passed by the House of Representatives since January 1964, when the Turkish members withdrew:

1. The amalgamation of the High Court and the Supreme Constitutional Court.
2. The abolition of the Greek Communal Chamber and the creation of a Ministry of Education.
3. The unification of the Municipalities.
4. The unification of the Police and the Gendarmerie.
5. The creation of a military force by providing that persons between the ages of eighteen and fifty can be called upon to serve in the National Guard.
6. The extension of the term of office of the President and the House of Representatives by one year intervals from July 1965 until elections in February 1968 and July 1970 respectively.
7. New electoral provisions; abolition of separate Greek and Turkish rolls; abolition of post of Vice-President, which was re-established in 1973.

* Under the Constitution of 1960 the Vice-Presidency and three posts in the Council of Ministers are reserved for Turkish Cypriots. However, there has been no Turkish participation in the government since December 1963. In 1968 President Makarios announced that he considered the office of Vice-President in abeyance until Turkish participation in the government is resumed, but the Turkish community elected Rauf Denktaş Vice-President in February 1973.

† Presidential elections were scheduled to take place in February 1978.

PARLIAMENT**HOUSE OF REPRESENTATIVES**

The House of Representatives originally consisted of 50 members, 35 from the Greek community and 15 from the Turkish community, elected for a term of five years. In January 1964 the Turkish members withdrew and set up the Turkish Legislative Assembly of the Turkish Cypriot Administration.

JUDICIAL SYSTEM

Supreme Court: Nicosia.

President: Hon. Mr. Justice M. A. TRIANTAFYLIDIS.

Judges: Hon. Mr. Justice A. S. STAVRINIDES, Hon. Mr. Justice L. N. LOIZOU, Hon. Mr. Justice T. HADJIAN-ASTASSIOU, Hon. Mr. Justice A. N. LOIZOU, Hon. Mr. Justice Y. CH. MALACHTOS.

The Constitution of 1960 provided for a separate Supreme Constitutional Court and High Court but in 1964, in the absence of the Turkish members of the House of Representatives, these were amalgamated to form a single Supreme Court.

The Supreme Court is the final appellate court in the Republic and the final adjudicator in matters of constitutional and administrative law, including recourses on conflict of competence between state organs on questions of the constitutionality of laws, etc. It deals with appeals from Assize Courts and District Courts as well as from the decisions of its own single judges when exercising original jurisdiction in certain matters such as prerogative orders

of *habeas corpus*, *mandamus*, *certiorari*, etc., and in admiralty and certain matrimonial causes.

Assize Courts and District Courts:

As required by the Constitution a law was passed in 1960 providing for the establishment, jurisdiction and powers of courts of civil and criminal jurisdiction, i.e. of six District Courts and six Assize Courts.

Ecclesiastical Courts:

There are seven Orthodox Church tribunals having exclusive jurisdiction in matrimonial causes between members of the Greek Orthodox Church. Appeals go from these tribunals to the appellate tribunal of the Church.

Supreme Council of Judicature: Nicosia.

The Supreme Council of Judicature is composed of the Attorney-General, the President and Judges of the Supreme Court.

It is responsible for the appointment, promotion, transfer, etc., of the judges exercising civil and criminal jurisdiction in the District Courts and the Assize Courts.

"TURKISH FEDERATED STATE OF CYPRUS"

The Turkish intervention in Cyprus in July 1974 saw the establishment of a separate area in northern Cyprus under the control of the Autonomous Turkish Cypriot Administration with a Council of Ministers, and separate judicial, financial, military and educational machinery serving the Turkish community.

On February 13th, 1975, the Turkish-occupied zone of Cyprus was declared the "Turkish Federated State of Cyprus" and Rauf Denktaş elected President. At the second joint meeting held by the Executive Council and Legislative Assembly of the Autonomous Turkish Cypriot Administration it was decided to set up a Constituent Assembly which would prepare a Constitution for the "Turkish Federated State of Cyprus" within 45 days. This constitution, which was approved by the Turkish Cypriot population in a referendum held on June 8th, 1975, is regarded by the Turkish Cypriots as a first step towards a federal republic of Cyprus. The main provisions of the constitution are summarized below.

The "Turkish Federated State of Cyprus" is a democratic, secular republic based on the principles of social justice and the rule of law. It shall exercise only those functions which fall outside the powers and functions expressly given to the [proposed] Federal Republic of Cyprus. Necessary amendments shall be made to the constitution of the "Turkish Federated State of Cyprus" when the constitution of the Federal Republic comes into force. The official language is Turkish.

Legislative power is vested in a Legislative Assembly, composed of 40 deputies, elected by universal suffrage for a period of five years.

The President is Head of State and is elected by universal suffrage for a period of five years. No person may be elected President for more than two consecutive terms.

The Council of Ministers shall be composed of a Prime Minister and 10 Ministers.

Judicial power is exercised through independent courts.

Other provisions cover such matters as the rehabilitation of refugees, property rights outside the "Turkish Federated

State", protection of coasts, social insurance, the rights and duties of citizens, etc.

The "Turkish Federated State of Cyprus" has neither sought nor received international recognition as an independent state, and in March 1975 the UN Security Council adopted a resolution regretting its creation.

Vice-President of the Republic and President of the "Turkish Federated State of Cyprus": RAUF R. DENKTAŞ.

CABINET

(October 1977)

Prime Minister: NEJAT KONUK.

Minister of Defence and Foreign Affairs: VEDAT ÇELİK.

Minister of the Interior: ORHAN ZİHNİ BİLGEHAN.

Minister of Communications and Public Works: EROL KAZIM ANDAÇ.

Minister of Health: DR. ALİ ATUN.

Minister of Labour and Social Insurance: MUSTAFA ÇAĞATAY.

Minister of Housing and Rehabilitation: HAKKI ATUN.

Minister of Agriculture, Natural Resources and Power: İRSİN KÜÇÜK.

Minister of Culture, Education and Training: KENAN ATAOL.

Minister of Commerce, Industry and Tourism: RECEP ALİ GÜRLER.

Minister of Finance: TANSEL FİKRİ.

LEGISLATIVE ASSEMBLY

The forty-member Assembly replaced the former Constituent Assembly in June 1976. It is the only body empowered by the Constitution to exercise the Federated State's legislative functions. The 40 deputies are elected for a period of five years.

Speaker: OSMAN ÖREK.

Deputy Speaker: OĞUZ R. KORHAN.

Judges: Hon. Justices ÜLFET EMİN, AHMED İZZET, ŞAKİR S. İLKAY, SALİH S. DAYIÖĞLU.

In the areas governed by the "Turkish Federated State of Cyprus" the Supreme Court exercises the powers vested in the Supreme Council of Judicature and the Supreme Court by the 1960 Constitution. It is the final appellate court dealing with appeals from Assize and District Courts and from the decisions of its own judges when exercising original jurisdiction. It is the final adjudicator in matters of constitutional and administrative law.

Assize Courts and District Courts:

The courts of civil and criminal jurisdiction, established by the law of 1960, amended by the Constitution of the "Turkish Federated State".

Turkish Communal Courts:

Civil disputes relating to the personal status of members of the Turkish community are dealt with by two Communal Courts. There is also a communal appellate court to which appeals may be made from the courts of first instance.

TRANSPORT

There are no railways in Cyprus.

ROADS

In 1975 there were 9,686 kilometres of roads, of which 4,462 kilometres were paved and 5,224 kilometres were earth or gravel roads. Bus and taxi services between Nicosia and the principal towns and villages were severely disrupted by the Turkish invasion. The north and south are now served by separate transport systems, and there are no services linking the two sectors. There are plans to build a highway between Nicosia and Kyrenia, to be completed in 1978.

SHIPPING

Until 1974 Famagusta was the island's most important harbour, handling about 83 per cent of the country's cargo. Famagusta is a natural port capable of receiving ships of a maximum draught of 9.2 metres. Since its capture by the Turkish army in August 1974 the port has been officially declared closed to international traffic. However, it continues to serve the Turkish-occupied region.

The ports which serve the country's maritime trade at present are Limassol and Larnaca which are both newly constructed. In 1975 Larnaca handled 30 per cent of the general cargo traffic with the remaining 70 per cent handled by Limassol. Paphos, in the west, an open roadstead, provides anchorage for small vessels drawing less than 3 metres.

Limassol, already in 1974 the main passenger port of the island has, since the closure of Famagusta, developed into the principal port of Cyprus, handling in 1975, 927,925 tons of cargo, 61 per cent of Famagusta's pre-1974 level. Larnaca is the island's main oil port, handling in addition, 74,600 tons in imports and 323,000 in exports in 1975.

Both Kyrenia and Karavostassi are under Turkish occupation and have been declared closed to international traffic. Karavostassi used to be the country's major mineral port dealing with 76 per cent of the total mineral exports. However, since the war minerals are being passed through Vassiliko and Limni which are open roadsteads.

Trade and Industry, Transport, Tourism

In recent years the number of merchant vessels registered in Cyprus has risen sharply from 314 (1,575,702 g.r.t.) in 1970 to 930 (3,329,346 g.r.t.) in 1975.

bers 135,000 and the air force 46,000; border troops number 10,000. The People's Militia comprises 100,000 part-time personnel. Defence expenditure in 1977 totalled 18,240 million korunas. As a result of the invasion of 1968, Soviet forces occupy permanent positions on the frontier with the Federal Republic of Germany.

Economic Affairs

Although Czechoslovakia depends on the U.S.S.R. for many raw materials, it is a highly industrialized country. In 1976 the industrial sector employed 38 per cent of the working population and produced 64 per cent of Net Material Product. Industry is state-owned. Until 1961, heavy industry and engineering received precedence, but under the third Five-Year Plan (1961-65), greater stress was laid on light industry. The fourth Five-Year Plan (1966-70) aimed to develop the power and chemical industries, modernize machinery building and improve consumer services.

Under this plan the radical reforms of Dr. Ota Šik, then Deputy Prime Minister, were proposed, including the decentralization of industry, autonomy for individual state enterprises, and the acceptance of Western capital for joint ventures. These plans were shelved, and a return to strong central management of the economy came in 1969. Czechoslovakia is an important engineering nation with a considerable output of motor cars and cycles. Other important industries are glass, beer, ceramics and textiles.

Agriculture has been collectivized and about 95 per cent of the land is under agricultural co-operatives, state farms or communal enterprises. It has become an important stabilizing factor in the economy. During the period 1971-75, production increased by 15.5 per cent. Important crops are wheat, barley, potatoes and sugar beet.

The targets of the fifth Five-Year Plan were exceeded. National income rose by 31.7 per cent, 3.7 per cent above the target, and investment went up by 44.1 per cent. The gross national product increased by 38 per cent, and industrial output grew by 37.5 per cent.

However, in 1977 there were indications of an economic slowdown, due mainly to the previous year's poor harvest, the labour shortage, energy problems and less favourable terms of trade.

The sixth Five-Year Plan (1976-80) envisages a 27-29 per cent increase in national income. Investment will expand by 31 per cent. Priority is being given to the development of industry, particularly the engineering sector, which should achieve a growth rate of 48-51 per cent.

Czechoslovakia is a member of the Council for Mutual Economic Assistance (CMEA), and a large proportion of its trade is with the countries of Eastern Europe, particularly the Soviet Union. However, there is considerable trade with West European countries, notably the Federal Republic of Germany, Austria and the United Kingdom. In 1976 a record trade deficit of 4,461 million korunas was registered with the West. Principal exports include machinery and equipment, chemicals and fuels, and glass and other manufactured goods.

Transport and Communications

About 46 per cent of all freight traffic is carried by the

railways which have a total length of 13,186 km., 2,807 of which are electrified. Roads (totalling 73,677 km. in 1977) carry about 84 per cent of the passenger transport. The Elbe and Danube are navigable and Czechoslovakia's overseas trade passes through East German, Polish and Black Sea ports. Civil aviation is important and there are about 60 regular internal services.

Social Welfare

A single and universal system of social security was established in Czechoslovakia after the Second World War. All workers and employees benefit equally from the insurance scheme. Protection of health is provided for by law, with particular emphasis on the prevention of illness rather than treatment and cure. Medical care, treatment, medicines, etc. are free for the entire Czechoslovak population. The National Health Insurance Scheme is administered by the Revolutionary Trade Union Movement, which also supervises other aspects of social welfare such as protection of the individual at work, housing conditions and recreation schemes. Since 1956 sickness benefit has been paid to all those workers who are temporarily unable to work due to illness, injury, medical treatment, etc. Sickness benefit may be paid for a maximum period of two years after which time disablement pension applies. Social security is guaranteed for all through different schemes: for wage-earners, members of co-operative societies, members of agricultural co-operatives, pensioners and members of the armed forces. Benefits and rights are the same for all these groups. Great importance is attached today to maternity benefits and family allowances, which are paid according to the situation of the woman and family concerned.

Education

Many children between the ages of three and six years attend kindergarten (*mateřská škola*). In 1976/77 there were 522,066 pupils at such schools. Education is compulsory between the ages of 6 and 15 years, when children attend the basic school (*základní devítiletá škola*). There were 8,550 basic schools with 1,882,371 pupils in attendance in 1976/77. At first a general curriculum is provided, followed by more specialized subjects.

The secondary school system in Czechoslovakia is similar to those of other countries in Eastern Europe. The vast majority of Czechoslovak children continue their education in some form or other after the compulsory basic school. The general secondary school (*střední všeobecně vzdělávací škola*), provides three-year courses in either mathematics and science, or languages and the social sciences. The *střední škola pro pracující* (secondary school for adult students) is attended by workers and adults and in most cases is actually run by industrial plants for their employees. In 1976/77, about 340 general secondary schools and secondary schools for adult students had 137,105 students. Vocational secondary schools (*střední odborná škola*), as their name suggests, provide a general education together with vocational training. There were 385 such schools with 307,303 students in 1976/77. The apprentice school (*učňovská škola*) trains the student to enter a trade in industry, agriculture, etc., straight from school. In 1976/77 they were attended by 336,020 students. At the same time, 36 institutions of higher learning, including 6 universities, had 160 departments and 168,310 students.

THE CONSTITUTION

(Proclaimed on July 11th, 1960; amended October 1968, July 1971 and May 1975.)

The Czechoslovak Socialist Republic is a Federal State of two fraternal nations possessing equal rights, the Czechs and the Slovaks.

According to the Constitution, work in the interests of the community is a primary duty and the right to work a primary right of every citizen. All citizens have equal rights and equal duties without regard to nationality and race. Remuneration for work done is based on its quantity, quality and social importance. Men and women have equal status. All citizens have the right to health protection, education and leisure after work including paid holidays. Other rights include: freedom of expression, assembly, inviolability of the person, the home, mail, etc. Everyone has the right to profess any religious faith or to be without religious conviction.

The economic foundation of the State is the Socialist economic system which excludes every form of exploitation of man by man. The means of production are socially owned and the entire national economy is directed by plan. Socialist ownership includes both national property such as mineral wealth, the means of industrial production, banks, etc., and co-operative property. The land of members of agricultural co-operatives remains the personal property of the individual members, but is jointly farmed by the co-operative. Small private enterprises based on the labour of the owner himself and excluding exploitation of another's labour power are permitted. Personal ownership of consumer goods, family houses and savings derived from labour is inviolable. Inheritance of such personal property is guaranteed.

The Czechoslovak Constitution does not restrict itself to laying down a system of state organs but also sets forth the principles by which the life of society is to be guided. It is not just a Constitution of the State but a constitution for the whole of society. In economic, political and cultural life, in questions of social security and many other spheres it emphasizes the participation of citizens in the administration of public affairs and even transfers a number of functions that have hitherto pertained to state organs to the working people and their voluntary organizations.

The guiding force in society and in the State is the Communist Party of Czechoslovakia, a voluntary militant alliance of the most active and politically conscious citizens. It is associated with the other political parties, the Trade Union Movement and other people's organizations in the National Front of Czechs and Slovaks.

FEDERAL ASSEMBLY

The supreme organ of state power in the Czechoslovak Socialist Republic is the Federal Assembly (Parliament) which is elected for a five-year term and elects the President of the Republic. He may be relieved of his duties by the Assembly if he has been unable to fulfil them for over a year. The Federal Assembly consists of two chambers of equal rights: the House of the People and the House of Nations. The composition of the House of the People corresponds to the composition of the population of the Czechoslovak Socialist Republic and of its 200 deputies, 137 are Czechs and 63 Slovaks. The House of Nations has 110 deputies on parity basis: 75 are elected in the Czech Socialist Republic and 35 in the Slovak Socialist Republic.

PRESIDENT

The President, elected by the Federal Assembly, appoints the Federal Government. The Government is the supreme executive organ of State power in Czechoslovakia; it consists of a Prime Minister, 10 Deputy Prime Ministers and 16 Ministers. The Ministries of Foreign Affairs, of National Defence, of Foreign Trade, of Transport and of Posts and Telecommunications, are within the exclusive competence of the Federation, i.e. there are no corresponding portfolios in the governments of the republics. The second group of Federal Government organs share authority with organs of the two republics, i.e. there are corresponding portfolios in the national governments.

ELECTORAL SYSTEM

All representative bodies are elected, and the right to elect is universal, equal and by secret ballot. Every citizen has the right to vote on reaching the age of 18, and is eligible for election on reaching the age of 21. Deputies must maintain constant contacts with their constituents, heed their suggestions and be accountable to them for their activity. A member of any representative body may be recalled by his constituents at any time.

For election purposes, the country is divided into electoral districts; there are 200 electoral districts in the Czechoslovak Socialist Republic, each represented by one deputy in the House of the People, and 75 electoral districts each in the Czech and Slovak Socialist Republics, which send one deputy each to the House of Nations.

All candidates are National Front candidates, put forward by the Communist Party of Czechoslovakia, and by the other political parties and social organizations associated in the National Front. One or more candidates can be nominated for one electoral district. Appropriate National Front organs select the candidates from the list of nominees, and submit their names for registration.

The principle of simple majority obtains in the elections: the candidate is elected when he obtains more than 50 per cent of the votes cast, provided that the majority of all voters in his electoral district exercise their right to vote. When either of the two conditions is not met, new elections are held in the electoral district concerned within two weeks. When a seat becomes vacant, the Presidium of the Federal Assembly calls a by-election in the constituency; this is not mandatory in the last year of the deputies' term of office.

NATIONAL COUNCILS

Each of the republics has its own parliament: the Czech National Council and the Slovak National Council. The members are elected for a five-year term of office. The Czech National Council has 200 deputies, the Slovak National Council 150 deputies. There are also separate Czech and Slovak Governments, each consisting of a Prime Minister, 3 Deputy Prime Ministers and 15 other Ministers.

NATIONAL COMMITTEES

National committees are the organs of popular self-government in the regions, districts and localities. They rely on the active participation of the working people of

their area and co-operate with other organizations of the people. They direct local economic and cultural development, ensure the protection of socialist ownership and the maintenance of socialist order in society, see to the implementation and observance of laws, etc. They take part in drafting and carrying out the State plan for the development of the national economy and draw up their own budgets which form a part of the State budget. Commissions elected by the national committees are charged with various aspects of public work and carry out their tasks with the aid of a large number of citizens who need not be elected members of the national committees.

JUDICIAL SYSTEM

The execution of justice is vested in elected and independent courts. Benches are composed of professional judges and of judges who carry out their function in addition to their regular employment. Both categories are equal in making decisions. Judges are independent in the discharge of their office and bound solely by the legal order of the socialist State. The supervision of the observance of the laws and other legal regulations by public bodies and by individual citizens rests with the Office of the Procurator. The Procurator-General is appointed and recalled by the President of the Republic and is accountable to the Federal Assembly.

JUDICIAL SYSTEM

Justice is executed through elected courts which consist of three ranks of law courts: the Supreme Court of the Czechoslovak Socialist Republic (together with Supreme Courts of the Czech and Slovak Socialist Republics), Regional and District Courts. There are also Military Courts which are subject to special regulations. Judges of the Czechoslovak Supreme Court are elected by the Federal Assembly; judges of the Czech and Slovak Supreme Courts and of the Regional and District Courts are elected by the National Councils of the respective republics. Judges are of two kinds, professional and lay judges, the

latter having other occupations, but both types have equal authority. Lay judges are elected by District National Committees.

Chairman of the Supreme Court: Dr. JOSEF ONDŘEJ.

Supervision of the observance of laws and legal regulations rests with the Procurator-General who is appointed by the President of the Republic and accountable to the Federal Assembly.

Procurator-General: Dr. JÁN FEJŠ.

THE PRESS

Although the Czechoslovak Press was considerably affected by the events of 1968, its basic purpose is still as defined in the October 1966 Press Law: "to give as far as possible complete information . . . to advance the interest of socialist society . . . to promote the people's socialist awareness of the policy of the Communist Party as the leading force in society and state".

This law, which codified previous legislation on the rights and duties of journalists and publishers states that "freedom of expression and of the Press is guaranteed by the fact that publishers and press organizations . . . have been placed at the disposal of the working people and their organizations". Hence, only political parties and such social institutions associated with the National Front as trade unions, youth unions, cultural associations and rural co-operatives may own newspapers and periodicals. Private ownership is forbidden. But even collective ownership rests upon official approval; papers must be registered with the Czech or Slovak Office for the Press and Information, and when the Editor fails to observe the conditions under which approval was given, the paper may be suspended.

During 1968 there was freedom of publication and Western books circulated in large editions. Censorship was abolished in June, but restored again in September. In 1969 censorship was again abolished, but the necessity for official approval has since prevented the publication of ideologically dissenting journals. The Editor of a paper or periodical bears full responsibility for its contents.

The Czechoslovak people far exceed other East European nations in their consumption per head of newspapers and magazines. There are thirty daily papers, including nine in Prague and nine (one in Hungarian and the rest in Slovak) in Bratislava. About 500 weekly papers and magazines and an even greater number of less frequent periodicals are also published. In addition, farms and factories produce their own daily or weekly news-sheets, dealing mainly with local issues. All registered periodicals receive an allocation of newsprint.

Political speeches and articles on social and economic development are given special prominence. In contrast with much of the East European Press, which is often characterized as dull and lacking in popular appeal, the Czechoslovak Press is relatively lively and colourful and allows a qualified scope for criticism. There is no tabloid press as the policy is to play down such items as constitute

the sort of sensationalism familiar to the West. Advertising is now more common than formerly, and although mainly concerned with state enterprises, it includes some material from abroad. Sales are mainly by subscription.

The most widely read and influential papers are the Prague dailies headed by *Rudé právo*. This paper is the chief organ of the Czechoslovak Communist Party. It is eight pages long and has a nation-wide circulation of 900,000 copies. Its sister paper, the Slovak C.P.'s *Pravda* (330,000), is the leading provincial daily. The Czech and the Slovak Trade Union organs are *Práce* and *Práca* in their respective cities. Three other important metropolitan dailies are *Lidová demokracie* and *Svobodné slovo*, produced respectively by the People's Party and the Socialist Party, and *Mladá fronta*, published by the Central Committee of the Socialist Union of Youth.

There are also many small circulation periodicals—often of very high quality—dealing with specialized subjects. One should also note several very popular and colourful women's magazines, such as *Vlasta* (740,000), and the satirical *Dikobraz*, famous for its political cartoons.

The national news agency, Československá tisková kancelář (ČTK), receives a state subsidy and is controlled by the Federal Government through its Presidium.

PUBLISHERS

In May 1949 legislation was passed making the publication, printing, illustration, and distribution of all books and music the prerogative of the State. These activities are now restricted to the Government, political parties, trade unions, and national and communal bodies. However, churches and religious bodies are permitted to publish if the State will accept their work for printing. In 1976, 6,805 titles were published.

DENMARK

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Kingdom of Denmark consists of the peninsula of Jutland, the islands of Zealand, Funen and Bornholm and 480 smaller islands between the North Sea and the Baltic. Outlying possessions are Greenland and the Faeroe Islands in the North Atlantic. Denmark is low-lying and the climate is temperate with mild summers and cold, rainy winters. The language is Danish. The Danish Lutheran Church is the established Church, to which 94 per cent of the population belong, and there are small communities of Roman Catholics, Baptists and Jews. The national flag (proportions 37 by 28) carries a white cross on a red background, the upright of the cross being to the left of centre. The capital is Copenhagen.

Recent History

On the ending of German occupation in 1945 Denmark immediately recognized the independence of Iceland, which had been declared the previous year. Home rule was granted to the Faeroe Islands in 1948. Denmark was a founder member of NATO in 1949 and of the Nordic Council in 1952. In January 1972 King Frederik IX died and his eldest daughter, Margrethe, became the first queen to rule Denmark for nearly 600 years. Following a referendum, Denmark entered the EEC in January 1973.

The system of proportional representation embodied in the 1953 Constitution makes it difficult for a single party to gain a majority in the Folketing, and the tendency of Danish parties to fragment has produced a series of coalition and minority governments in recent years. The major established parties all lost support in the general election of December 1973. The Progress Party, standing for tax and public spending cuts, became the second largest party in the Folketing, where ten parties were now represented, compared with five in the previous parliament. The Liberal Party, led by Poul Hartling, formed a minority government. An economic recession, rising unemployment, galloping inflation, a large trade deficit and popular discontent with high taxes and EEC membership posed major problems. Following the general elections of January 1975 and the subsequent resignation of the minority Liberal government, a minority Social Democratic government under the leadership of Anker Jørgensen was formed in February 1975. In September, agreement was reached with four opposition parties on a comprehensive economic package, including investment incentives, wage restraint and public spending cuts. Following the General Election held in February 1977, Anker Jørgensen continued in office with a minority Social Democratic cabinet. In March the Government reached an inter-party agreement on several issues crucial to the success of its incomes policy, which had been narrowly passed in August 1976. To avoid a massive strike, a two-year collective wage settlement was agreed in April, and in August large increases in indirect taxation were proposed. These, combined with the employment programme, were intended to increase employment and improve the balance of payments position.

In October 1977 Orla Møller, the Defence and Justice Minister, resigned, and, from the cabinet reshuffles which

followed his departure, it seemed possible that Mr. Jørgensen was hoping to pursue a more leftist policy.

Government

Denmark is a constitutional monarchy. Under the 1953 constitutional charter, legislative power is held jointly by the hereditary monarch (who has no personal political power) and the unicameral Folketing (Parliament), with 179 members, including 175 from metropolitan Denmark and two each from the Faeroe Islands and Greenland. Members are elected for four years (subject to dissolution) by and from Danish subjects aged 20 and over, using proportional representation. Executive power is exercised by the monarch through a Cabinet, led by the Prime Minister, which is responsible to the Folketing. Denmark comprises 14 counties (*amtskommuner*), one city and one borough, all with elected councils.

Defence

Denmark maintains an army of 21,800 men, 360 of whom are serving with the United Nations in Cyprus, a navy of 5,800 men and an air force of 7,100 men. The army has some 69,300 reserves, and there is a volunteer Home Guard of 54,400 men. Military service is for nine months. Denmark abandoned its neutrality after the Second World War and has been a member of NATO since 1949. Defence policy is largely geared to NATO co-operation. The defence budget for 1977/78 is 6,320 million kroner.

Economic Affairs

Danish agriculture is internationally competitive and is organized on a co-operative basis. Farmers and small-holders are grouped in co-operative societies which market the produce and conduct scientific research. The co-operatives are united in national federations. Butter, beef and bacon are the main agricultural exports. About 70 per cent of the land surface is used for agriculture (1975) and though this percentage has been declining recently the intensive nature of the farming has to a large extent maintained the level of production. A severe drought in the summer of 1976 had serious consequences for dairy production, with about 600 million kroner lost in export revenue. Agriculture, including dairies and slaughter houses, contributed 6.3 per cent of G.D.P. in 1976.

Denmark has industrialized considerably since 1945 and manufacturing provided 26 per cent of G.D.P. in 1976. Industry accounts for nearly two-thirds of the country's exports. In spite of a great shortage of raw materials the iron and metal industry is now the most important producing group. The other major industries are food-processing and beverages, fishing, shipbuilding, engineering and chemicals. Recently Danish-designed furniture, electronics, porcelain, textiles and metal goods have been finding larger markets abroad. Most industrial concerns are small and privately owned, only the public services such as the post and railways being nationalized. An encouraging oil find in the Danish sector of the North Sea was announced in 1975.

Faced with a low level of industrial production and high unemployment, the Government introduced a package of

measures in September 1975 to increase consumption and investment. Stimulation of domestic demand, encouraged by the temporary reduction in VAT rate to 9½ per cent, resulted in an import-fed consumer boom, which made little impression on unemployment, running at 6 per cent in 1975, and increased the balance of payments deficit. Until demand picks up in Denmark's main export markets, unemployment and inflation, which has continued at around 9.5 per cent, will remain major worries.

Unemployment in 1977 was over 6 per cent and industrial output fell; G.N.P. growth was expected to rise by 5 per cent. However, although the trade deficit remained high, the payments deficit declined. There have been balance of payments deficits on current account every year since 1963, largely due to Denmark's reliance on imported oil for 90 per cent of its energy needs, and large loans have been contracted abroad to cover the deficit. The Danish krone was devalued in April 1977 by 3 per cent, followed in August by a further devaluation of 5 per cent against the West German Mark. To avoid aggravating the external position and increasing indebtedness still further, the policy to restrict internal demand will continue. In August 1977 a severe programme of fiscal restraint was presented to Parliament; increases in indirect taxation are intended to improve the balance of payments deficit while around 8,000 million kroner will be spent on reliefs and business support to aid unemployment. A pay restraint programme, initially approved in August 1976, nominally limited wage rises to 6 per cent, but the increase was expected to reach 10 per cent in 1977 in view of a rise in the minimum wage and the continuing upward wage drift.

Transport and Communications

There are about 2,500 km. of railways, most of which are operated by the State. There are about 65,000 km. of road, 88 per cent of which are hard surface. Ferry services connect the principal islands and Jutland and there are services to Sweden, Norway and Germany. Denmark maintains a large merchant navy with a displacement of over 4 million gross tons. The present international airport is at Kastrup. Projects for a new international airport on Saltholm Island, for road and rail links across the Sound between Denmark and Sweden and plans to build a bridge or tunnel across the Great Belt to link Zealand and Funen were under consideration in 1976.

Social Welfare

Denmark was one of the first countries to introduce State social welfare schemes. Principal services cover unemployment, sickness, old age and disability and are financed largely by State subventions. General taxation has now replaced compulsory health insurance.

Education

Education is compulsory for nine years, though exemption may be granted after seven years. The State is obliged to offer a tenth voluntary year, while provisions for a twelve-year system are planned. State-subsidized private schools are available, though over 90 per cent of pupils attend public schools. The 1975 Education Act, with effect from August 1976, increased parental influence, introduced

a comprehensive curriculum for the first 10 years and offered options on final tests or a leaving certificate thereafter. At the age of 16 or 17, pupils may transfer to a grammar school (*Gymnasium*) to take the university entrance examination (*studentereksamen*) after three years or they may take a new two-year course leading to the higher preparatory examination certificate.

There are five universities and three technical universities in Denmark. Nursery classes and vocational training schemes are increasingly in demand. The traditional folk high schools offer a wide range of further education opportunities.

Tourism

Tourists visit Denmark for the peaceful charm of its countryside and old towns, or for the sophistication of Copenhagen. Tourism accounted for 4,860 million kroner in 1976.

Visitors from Finland, Iceland, Norway and Sweden do not require a passport to enter Denmark.

Visas are not required for nationals of the following countries: EEC countries, Algeria, Andorra, Argentina, Australia, Austria, the Bahamas, Bangladesh, Barbados, Benin, Bolivia, Botswana, Brazil, Bulgaria, Canada, Chile, Colombia, Costa Rica, Cuba, Cyprus, the Dominican Republic, Ecuador, El Salvador, Fiji, the Gambia, Ghana, Greece, Grenada, Guatemala, Guyana, Haiti, Honduras, India, Iran, Israel, the Ivory Coast, Jamaica, Japan, Kenya, the Republic of Korea, Lesotho, Liechtenstein, Malawi, Malaysia, Malta, Mauritius, Mexico, Monaco, Morocco, New Zealand, Nicaragua, Niger, Panama, Paraguay, Peru, the Philippines, Portugal, Romania, San Marino, Sierra Leone, Singapore, South Africa, Spain, Swaziland, Switzerland, Tanzania, Thailand, Togo, Trinidad and Tobago, Tunisia, Turkey, Uganda, United Kingdom dependencies, the U.S.A., Uruguay, the Vatican City, Venezuela, Yugoslavia and Zambia.

Sport

Practically all sport is amateur. The national game is football, and rowing, swimming and sailing are popular. Other sports include tennis, the Danish game of hand-ball, shooting and fishing.

Public Holidays

1978: March 23rd–27th (Easter), April 21st (Great Prayer Day), May 4th (Ascension Day), May 14th, 15th (Whitsun), June 5th (Constitution Day), December 25th, 26th (Christmas).

1979: January 1st (New Year's Day).

Weights and Measures

The metric system is in force.

Currency and Exchange Rates

100 øre = 1 Danish krone.

Exchange rates (October 1977):

£1 sterling = 10.81 kroner.

U.S. \$1 = 6.09 kroner.

100 øre = 1 Danish krone (kr.).

Coins: 5, 10 and 25 øre; 1 and 5 kroner.

Notes: 10, 50, 100, 500 and 1,000 kroner.

Exchange rates (October 1977): £1 sterling = 10.81 kroner; U.S. \$1 = 6.09 kroner.

100 Danish kroner = £9.25 = \$16.41.

Note: Between November 1967 and August 1971 the official exchange rate (par value) was U.S. \$1 = 7.50 kroner (1 krone = 13.33 U.S. cents). From December 1971 to February 1973 the central exchange rate was \$1 = 6.98 kroner. In terms of sterling, the exchange rate was £1 = 18.00 kroner from November 1967 to August 1971; and £1 = 18.188 kroner from December 1971 to June 1972. Since March 1973 the krone has been allowed to "float" against the U.S. dollar. The average exchange rate (kroner per dollar) was: 6.0495 in 1973; 6.0949 in 1974; 5.7462 in 1975; 6.0450 in 1976.

THE CONSTITUTION

The main features of the 1953 Constitution are:

- (1) Changes in the succession law allowing a daughter to succeed to the throne in the absence of sons;
- (2) Abolition of the Upper House and the introduction of single-chamber Parliament;
- (3) The enfranchisement of Greenland, which will in future send two members to Parliament; and
- (4) Clause 20, which enables Parliament to assign some of its rights to an international body in the interest of international co-operation.

GOVERNMENT

The form of government is a limited (constitutional) monarchy. The legislative authority rests jointly with the Crown and Parliament. Executive power is vested in the Crown, and the administration of justice is exercised by the courts. The Monarch can constitutionally "do no wrong". He exercises his authority through the Ministers appointed by him. The Ministers are responsible for the government of the country. The Constitution establishes the principle of Parliamentarism under which individual Ministers of the whole Cabinet must retire when defeated in Parliament by a vote of no confidence.

MONARCH

The Monarch acts on behalf of the State in international affairs. Except with the consent of the Parliament, he

cannot, however, take any action which increases or reduces the area of the Realm or undertake any obligation, the fulfilment of which requires the co-operation of the Parliament or which is of major importance. Nor can the Monarch, without the consent of the Parliament, terminate any international agreement which has been concluded with the consent of the Parliament.

Apart from defence against armed attack on the Realm or on Danish forces, the Monarch cannot, without the consent of the Parliament, employ military force against any foreign power.

PARLIAMENT

The Parliament is an assembly consisting of not more than 179 members, two of whom are elected in the Faeroe Islands and two in Greenland. It is called the Folketing. Danish nationals, having attained 20 years of age, with permanent residence in Denmark, have the franchise and are eligible. The members of the Folketing are elected for four years. Election is by a system of proportional representation, with direct and secret ballot on lists in large constituencies. A bill adopted by the Folketing may be submitted to referendum, when such referendum is claimed by not less than one-third of the members of the Folketing and not later than three days after the adoption. The bill is void if rejected by a majority of the votes cast, representing not less than 30 per cent of all electors.

POLITICAL PARTIES

Socialdemokratiet (*The Social-Democratic Party*): Nyrops-gade 26, 1602 Copenhagen V; f. 1871; finds its chief adherents among workers, employees and public servants. 125,000 members. Chair. ANKER JØRGENSEN; Gen. Sec. EJNER HØVGAARD CHRISTIANSEN. Party organs: *Vor Politik* (quarterly) and *Ny Politik* (monthly).

Venstre (*The Liberal Party*): Hammerichsgade 14, Copenhagen V; founded in 1870. Its main adherents have been farmers but recently its votes have been distributed almost equally between the rural districts, the towns and built-up areas, so that it may claim to have adherents in all classes of the community. The main planks in the Party platform are free trade, a minimum of State interference, and the adoption, in matters of social expenditure, of a modern general social security system. Chair. POUL HARTLING; Sec.-Gen. KURT SØRENSEN. Chief party organs: *Fyns Tidende*, *Vestkysten*, *Frederiksborg Amts Avis*.

Konservative Folkeparti (*Conservative Party*): Vesterbrogade 40, 1602 Copenhagen V; f. 1916; advocates free initiative and the maintenance of private property, but recognizes the right of the State to take action to keep the economic and social balance. Chair. POUL SCHLÜTER; Gen. Sec. JENS KAROLI; Political Spokesman POUL SCHLÜTER. Chief party organ: *Vor Tid*.

JUDICIAL SYSTEM

In Denmark the judiciary is independent of the Government. Judges are appointed by the Crown on the recommendation of the Minister of Justice and cannot be dismissed except by judicial sentence.

The ordinary courts are divided into three instances, namely the Lower Courts, the High Courts and the Supreme Court. There is one Lower Court for each of the eighty-four judicial districts in the country. These courts must have at least one legally trained judge and they hear the majority of minor cases. The two High Courts serve Jutland and the islands respectively. They serve as appeal courts for cases from the lower courts, but are also used to give first hearing to the more important cases. Each case must be heard by at least three judges. The Supreme Court, at which at least five judges must sit, is the court of appeal for cases from the Higher Courts. Usually only one appeal is allowed from either court, but in special instances the Minister of Justice may give leave for a second appeal, to the Supreme Court, from a case which started in a lower court.

There is a special Maritime and Commercial Court in Copenhagen, consisting of a President and Vice-President with legal training and a number of commercial and nautical assessors; and also a Labour Court, which deals with labour disputes.

An Ombudsman is appointed by Parliament, after each general election, and is concerned with defects in the laws or administrative provisions. He must render to Parliament an annual report.

Ninety-four per cent of the population of Denmark belong to the Danish Lutheran Church.

Den Evangelisk-lutherske Folkekirke i Danmark (*The Danish Lutheran Church*) is the established Church of Denmark, and is supported by the State.

THE PRESS

Denmark's long press history dates from the first newspaper published in 1666, but it was not until press freedom was introduced by law in 1849 that newspapers began to assume their present importance. At four copies published daily for every ten inhabitants, the per capita circulation of Danish newspapers is one of the highest in the world. There are over 220 separate newspapers, and over 40 main dailies.

The freedom of the press is embodied in paragraph 77 of the 1953 Constitution and all censorship laws have been abolished. The legal limits to press comment are wide, legislation on defamation being chiefly concerned to protect the reputation of the individual. The Law of 1938 included provision for a Board of Denials and Corrections to be established to guard the individual's right to require a newspaper to correct factual errors. This Press Law makes editors legally responsible for the contents of a paper with the exception of signed articles for which the author is responsible.

Most newspapers and magazines are privately owned and published by joint concerns, co-operatives or limited liability companies. Ownership is usually restricted in number or confined to residents of the area in which the paper circulates.

The main concentration of papers is held by the Berlingske Tidende Group which owns *Berlingske Tidende*, *Weekendavisen*, *B.T.*, and the provincial *Jydske Tidende*, three weekly magazines and a large printing works controlling some 25 per cent of the total daily newspaper circulation.

Another company, *Politiken A/S*, owns several dailies, including *Politiken* and *Ekstra Bladet*, one weekly and a large publishing house. *De Bergske Blade* owns a group of six Liberal papers.

There is no truly national press. Copenhagen accounts for 16 per cent of the national dailies and about half the total circulation. The provincial press has declined since the last war, but still tends to be more politically orientated than the majority of Copenhagen dailies. The Communist Party's *Land og Folk* is the only paper to be directly owned by a political party, although all papers show a fairly pronounced political leaning. The three Social Democrat papers, headed by Copenhagen's *Aktuelt*, are owned and subsidized by the trade unions.

The most popular papers give a broad and serious news coverage; there is no really sensational press. The major Copenhagen dailies in order of circulation are *Berlingske Tidende*, *Ekstra Bladet*, *B.T.*, *Politiken* and *Aktuelt*. The serious evening paper *Information* and the weekly *Week-*

endavisen are also influential. *Fyens Stiftstidende*, published at Odense, is the largest provincial paper.

FINANCE

(cap. = capital; p.u. = paid up; dep. = deposits; m. = million)

The first Danish commercial bank was founded in 1846. In 1974 there were about 40 commercial banks and over 200 savings banks, considerably fewer than ten years earlier. In January 1975, restrictions on savings banks were lifted, giving commercial and savings banks equal rights and status. Several foreign banks have representative offices in Copenhagen, and in January 1975 restrictions on the establishment of full branches of foreign banks were removed. All banks are under government supervision, and public representation is obligatory on all bank supervisory boards.

THE FAEROE ISLANDS

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Faeroes are a group of 18 islands in the Atlantic between Scotland and Iceland with a total area of 1,399 sq. km. The climate is mild in winter and cool in summer with a mean temperature of 7°C. Most Faeroese are Lutherans belonging to the Danish National Church. The principal language is Faeroese but Danish must be taught in all schools. The flag (proportions 22 by 16) carries a red cross with a blue edge on a white field. The capital is Thorshavn.

History and Government

The Faeroe Islands have been under Danish administration since Queen Margrete of Denmark inherited Norway in 1380. The islands were taken over by the United Kingdom while Denmark was under German occupation but were restored immediately after the war. The Home Rule Act of 1948 gave them control over all their internal affairs but the Danish Folketing, to which the Faeroese send two members, looks after matters of mutual concern such as defence and foreign policy, the judicial and monetary systems.

Economic Affairs

Only some 6 per cent of the land surface is cultivated

and as the summers are too cool for grain, the main crops are potatoes and vegetables and grass for the large number of sheep raised on the islands. Coal is mined at Suderoy and about one fifth of the working population is engaged in handicrafts. The most important sector of the Faeroese economy is fishing, which employed 21 per cent of the labour force and contributed 29 per cent of a total G.D.P. of 1,057.8 million kroner in 1974, and accounts for nearly all the islands' exports. In January 1974, the *Lagtinget* decided not to join the EEC, but to negotiate a special trade agreement which would protect the fishing industry. Following Faeroese pressure, an agreement was reached limiting the annual cod and haddock catch of foreign trawlers from January 1974. In March 1977, despite protests from the EEC, the Faeroes imposed stringent conservation measures curbing fishing within a limit of 200 nautical miles (370 km.) from the coast. Meanwhile their trade balance remains very unstable and they are dependent on Denmark to make good any deficit. Danish subsidies account for about 15 per cent of the Faeroese G.N.P.

In 1940 the Faeroese krona was introduced. It must, however, always be freely interchangeable with the Danish krone at the rate of 1: 1. For exchange rate *see* under Denmark.

GOVERNMENT

The legislative body is the *Lagtinget* of up to thirty members elected on a basis of proportional representation. All Faeroese over the age of twenty have the right to vote. Based on the strength of the parties in the *Lagtinget* a small Government, the *Landsstyre*, is formed and this is the administrative body in certain spheres, chiefly relating to Faeroese economic affairs. All other Faeroese matters are administered by the central Danish Government. The *Lagmand* or Chairman has to ratify all *Lagtinget* laws. A commissioner known as the *Rigsombudsmand* represents the Kingdom and is in charge of the administration on the islands.

GREENLAND

INTRODUCTORY SURVEY

Location, Climate, Language, Capital

Greenland is the world's largest island with a total area of 2,176,000 square kilometres. Most of it is permanently covered by ice but 341,700 square kilometres of coastland is habitable. Both Danish and Eskimo languages are used. Godthåb is the capital.

History, Government, Defence

Greenland first came under Danish rule in 1380 although contact was lost between the sixteenth and eighteenth centuries. During the Second World War the U.S.A. took over control of Greenland but handed it back when Denmark was liberated from German rule. As part of the revision of the Danish constitution in 1953 Greenland became part of the Kingdom, and Denmark now takes care of all its external affairs, including defence. Greenland has a Provincial Council which deals with social affairs and wild life preservation. The Greenlanders are not subject to compulsory national service.

In October 1972 the Greenlanders voted by 9,894 to 4,062 against joining the EEC but, as part of Denmark, were bound by the Danish decision. Though Greenland's fishing limits were extended to 200 miles in January 1977, resentment of Danish domination of the economy, education and the professions continues to be expressed by Greenlanders. Among more radical elements in Greenland, there is a demand for a greater degree of self-determination. In 1975 the Minister for Greenland, Joergen Hansen, appointed a commission to work out terms for possible Greenland Home Rule, which in April 1976, produced proposals for a Parliament and Executive, to come into operation in 1979, subject to Danish approval and the result of a referendum to be held in Greenland in 1978.

Economic Affairs

Seal-hunting has traditionally been the main occupation in Greenland and it is still very important in the northern

district. In the south sheep-rearing is on the increase and in the central coastal areas fishing is of prime importance though some industrial establishments are being set up. The world's only commercially exploitable deposits of cryolite are mined there, but output amounting to 67,000 tons in 1968 fell to 43,400 tons in 1971. Apart from the minerals and fish and fish produce the main exports are sealskin and foxskin. In 1975 the Danish Government awarded the first concession for exploration and exploitation of three potential oil-producing areas of Greenland. The first well was drilled in mid-1976 by the TGA-Greppo Consortium but by September 1977, of five wells sunk, all had failed to find oil or gas. Recently there has been much prospecting for uranium and other minerals both in Greenland and on its continental shelf but the economy is still dependent on large subsidies of about 1,000 million kroner per year from Denmark.

Until 1950 Denmark had a monopoly of trade and industry in Greenland. Though this has now been abolished, the Royal Greenland Trade Department still controls about two-thirds of the total turnover in export production. Denmark provided about 91 per cent of Greenland's imports in 1971, and took some 75 per cent of total exports.

Education and Social Welfare

The educational system is the same as that for the main part of Denmark, except that the main language of instruction is Greenlandic. Danish is however quite widely used, as many teachers come from Denmark for a short term to relieve the shortage of local teachers. There is a school in every settlement and a teacher training college in Godthåb. In 1971/72 there were 96 schools of which a third had 20 or less pupils and another quarter 50 or less. There were 753 teachers, of whom 84 had teacher training in Greenland and 520 in Denmark.

There is a free health service for all residents, administered by the Danish Government.

GOVERNMENT

Denmark is represented in Greenland by the *Landsøvding* or Governor. Until 1967 he presided over meetings of the *Landsråd*, the provincial council, but since then they have elected their own chairman. This council, consisting of seventeen members, is elected by all Danish subjects over the age of 20 living in Greenland. All bills which relate to Greenland must be presented to the council before they go to the Folketing in Copenhagen. The Greenlanders are also able to vote for two members of the Folketing elected for North and South Greenland respectively.

Landsøvding: HANS LASSEN.

Chairman of Landsråd: LARS CHEMNITZ.

JUDICIAL SYSTEM

The island is divided into eighteen court districts and these courts all use lay assessors. For most cases these

lower courts are for the first instance and appeal is to the *Landsret*, the higher court in Godthåb, which is the only one with a professional judge. This court hears the more serious cases and appeal is to the High Court in Copenhagen.

RELIGION

The Greenlandic Church comes under the Bishop of Copenhagen and the Ministry for Ecclesiastical Affairs.

THE PRESS

There are no daily papers in Greenland.

Atuagagdliutit (Grønlandsposten): Editor, 3900 Godthåb; Advertising Dept., Bladforlagene, Dr. Tvaergade 30, 1302 Copenhagen K; Editor JØRGEN FLEISCHER; weekly.

RADIO AND TELEVISION

There are 7,200 radio receivers.

Radio Greenland: P.O.B. 607, 3900 Godthåb; 7 AM stations, 6 FM stations, 2 Short Wave stations; bi-lingual programmes Eskimo/Danish 13 hours daily; Dir. of Broadcasting FINN LYNGE; Technical Dir. ARNE MORTENSEN; Programme Dir. HANS HANSEN.

U.S. Armed Forces Radio and Television Service: 4683 Air Base Group (ADC), (CIO/AFRTS), APO New York, N.Y. 09023, U.S.A.; stations at Søndre Strømfjord and Thule; radio broadcasting 24 hours a day.

TRANSPORT

Inland traffic is mainly by motorboat, sled, light aircraft and helicopter. Godthåb is the main port and there

are also all-year ports at Faeringehavn, Frederikshåb and Sukkertoppen. There is an airport at Søndre Strømfjord for flights to Denmark, operated by SAS. In summer Icelandair run tourist flights from Reykjavik to Kulusuk Island in Angmagssalik fjord, and from Keflavik to Narssarssuaq on the west coast.

Grønlandsfly A/S: P.O.B. 612, 3900 Godthåb; f. 1960; helicopter services between Godthåb, Søndre Strømfjord and 12 centres along the west coast, also flights between Søndre Strømfjord and Kulusuk on the east coast and Narssarssuaq in the south; fleet of eight S-61N, four S-58T, three Bell 206 Jet Ranger, three Bell 204 and two DC-6A/B; Pres. FINLAND

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Republic of Finland lies in northern Europe, bordered in the far north by Norway and in the north-west by Sweden. The U.S.S.R. adjoins the whole of the eastern frontier. Finland's western and southern shores are washed by the Baltic. The climate varies sharply, with warm summers and cold winters. The mean annual temperature is 5°C (41°F) in Helsinki and -0.4°C (31°F) in the far north. There are two official languages; 93.2 per cent of the population speak Finnish and 6.6 per cent speak Swedish. Finnish is a member of the small Finno-Ugrian group of languages which includes Hungarian. There is a small Lapp population in the north. Over 90 per cent of the people belong to the Evangelical Lutheran Church and there are small groups of Roman Catholics, Methodists, Jews and other religious groups. The national flag (proportions 18 by 11) is white with an azure blue cross (the upright to the left of centre). The state flag has, at the centre of the cross, the national coat of arms. The capital is Helsinki.

Recent History

Finland ceded 12 per cent of its territory and paid very large reparations to the Soviet Union, with which it had been in conflict, at the close of the Second World War. In 1948 President Paasikivi and Stalin signed the Finno-Soviet Pact of Friendship, which was extended for twenty years from 1955, when the U.S.S.R. relinquished its military post on the Porkkala promontory. In 1956 Dr. Urho Kekkonen, then Prime Minister, was elected President. He was re-elected in 1962 and 1968. The Treaty of Friendship, Co-operation and Mutual Assistance between Finland and the Soviet Union was renewed for a further twenty years in 1970, and although its terms, calling for Finland to defend its territory against any attack upon the U.S.S.R., are strategically outmoded, it remains the cornerstone of Finnish foreign policy. For instance, Finland's trade agreement with the European Economic Community (EEC) and the European Coal and Steel Community, initialled in July 1972, was not signed until October 1973, in deference to Soviet apprehension that this would align the Finnish economy too closely with the West. In the meantime, an agreement with the Council for Mutual Economic Assistance (COMECON) was concluded and continuity in foreign policy assured by the extension of President Kekkonen's term of office from 1974 to the beginning of 1978 and the signing of a 15-year trade agreement with the Soviet Union in May 1977. Finland joined the United Nations and the Nordic Council in 1955, and became an associate member of EFTA in 1961.

In 60 years of independence, Finland has had 60 cabinets, including 20 minority coalitions. Political instability has been characterized by a succession of caretaker governments and premature elections. Kalevi Sorsa, a Social Democrat, was Prime Minister from September 1972 until his resignation in June 1975. A caretaker government under Keijo Liinamaa held office until the formation in November 1975 of a five-party coalition, the Government of National Emergency, led

by Martti Miettunen (Centre Party). In the event, the inclusion of the Communists proved divisive. The Government was persuaded to reverse its resignation in May 1976, but continued friction over economic policy led to the resignation of the Government in September. Miettunen reluctantly agreed to lead a new three-party minority coalition, excluding the Social Democrats and Communists, to carry through measures intended to overcome the country's economic crisis. In May 1977 this minority coalition resigned, after the President had urged the parties to form a majority government, and a new five-party cabinet was formed by Kalevi Sorsa, former Prime Minister and leader of the Social Democratic Party. His difficulty lay in securing and maintaining the co-operation of the left wing of his party, which was ideologically close to the majority of communists, and of the right wing, with its natural allies in the centre. Despite the Government's left-wing bias, Sorsa embarked on a plan to stimulate domestic demand by assisting private business through tax relief and thereby to combat Finland's growing unemployment by promoting production and productive investment.

Government

Finland has a republican constitution which combines a parliamentary system with a strong presidency. The unicameral Parliament has 200 members elected by universal adult suffrage for four years (subject to dissolution by the President), using proportional representation. The President, entrusted with supreme executive power, is elected for six years by a college of 300 electors, chosen by popular vote in the same manner as members of Parliament. Legislative power is exercised by Parliament in conjunction with the President. For general administration the President appoints a Council of State (Cabinet), headed by a Prime Minister, which is responsible to Parliament. Finland has 12 provinces, each administered by an appointed Governor.

Defence

The armed forces of Finland are restricted by treaty to 41,900, mostly conscripts serving up to 11 months. The defence budget for 1977 was 1,620 million markkaa, and the total strength of the armed forces in the same year was 39,900; comprising army 34,400, navy 2,500, and air force 3,000. There are also 690,000 reserves and about 4,000 frontier defence troops. Finnish troops have been used as UN peace-keeping forces, but at the end of October 1977, 200 were withdrawn from Cyprus and will not be replaced.

Economic Affairs

Forests cover about 70 per cent of Finland's land area. Cultivation has been intensified in recent years and the country is one of the world's leading exporters of pulp and paper. The demand for forest industry products declined in 1974 and 1975 due to adverse market conditions, but recovered in 1976 when they provided 44 per cent of Finland's export earnings. Amongst the manufacturing industries, the textile and chemical industries in particular

have experienced a rapid growth, but the rapidly expanding metal industry and engineering suffer from an increasing lack of capacity and skilled labour. The manufacture of furniture and other consumer durables is also important. Cereal and dairy farming are highly mechanized.

Following the recession of 1971, there was a return to economic growth. From the beginning of 1975, the restoration of a balance of payments equilibrium and a curbing of inflation have been the major targets for economic policy. With 14 per cent inflation and over 5 per cent unemployment in 1976, industrial production dropped again in 1977. There was a series of damaging strikes at the beginning of 1977, followed by a wage settlement that was far from moderate.

Since 1976 the Central Bank has exercised an unyielding tight credit policy, checking escalation in foreign debt, and in the first half of 1977 exports rose by 27 per cent while imports decreased.

The Finnmark was devalued in August, bringing its total devaluation to 8.7 per cent in 1977. This still left Sweden, its main competitor in the west European pulp and paper market, with a competitive margin of 7.3 per cent, and in October Finland reduced pulp prices by 10 per cent.

A trade agreement between Finland and the EEC came into effect in January 1974, under which tariffs were reduced in stages, leading to their abolition on most goods in 1977. In recent years EEC and EFTA countries have accounted for nearly 70 per cent of Finland's total trade turnover.

Transport and Communications

There are 6,010 km. of railways which provide connections with Sweden and the Soviet Union. There are 73,763 km. of roads and development of road traffic has grown rapidly. Extensive use is made of the canals which connect Finland's innumerable lakes; inland waterways are navigable by ships for 6,600 km. The Water Bus is a characteristic feature. Most of Finland's external freight and passenger traffic goes by sea, so that in winter water communications are restricted by the severe frost. However, ice-breakers are used to open up channels for commercial traffic.

Social Welfare

Social policy covers social security (national pensions, disability insurance, sickness insurance), social assistance (maternity, child, housing, education and other allowances and accident compensation) and social welfare (care of children, the aged, disabled and maladjusted, including services at home and in institutions). Sickness insurance compensates the patient for a considerable part of the costs of medical care outside hospital and the general hospitals charge moderate fees. The National Health Act, which came into force in 1972, provides for the establishment of health centres in every municipality, and the abolition of doctors' fees by 1979.

Education

Compulsory education for eight years was introduced in 1921 and now applies between the ages of 7 and 16 years. By the 1977/78 school year, the whole country will have transferred from the old school system to the new compre-

hensive education system. Compulsory education consists of the full course of the 9-year comprehensive school, in which instruction is the same for all students. Tuition is free for everybody. The comprehensive school is divided into a 6-year lower level and a 3-year upper level. After completed compulsory education the pupil may transfer to an upper secondary school or other vocational school or institute for three years. At the end of this time a student takes a matriculation examination which, if passed, entitles him to seek admission at one of the 17 universities and colleges at university level in Finland.

Tourism

Vast forests, Europe's largest inland water system, magnificent unspoilt scenery and the possibility of holiday seclusion are the chief attractions for the visitor to Finland. The winter sports season is long. The number of tourists visiting Finland has increased vastly since 1968, being 10.9 million in 1976. Tourist receipts were 1,307 million markkaa in 1976. Most visitors come from other Scandinavian countries, the Germans and Americans being second and third.

Citizens of Denmark, Iceland, Norway and Sweden do not require a passport to enter Finland.

Visas are not required by nationals of the following countries: Algeria, Argentina, Australia, Austria, the Bahamas, Barbados, Belgium, Botswana, Brazil, Bulgaria, Canada, Chile, Colombia, Costa Rica, Cyprus, Czechoslovakia, Ecuador, El Salvador, Fiji, France, the Gambia, the Federal Republic of Germany, Greece, Grenada, Guatemala, Hungary, India, Iran, Ireland, Israel, Italy, the Ivory Coast, Jamaica, Japan, the Republic of Korea, Lesotho, Liechtenstein, Luxembourg, Malawi, Malaysia, Malta, Mauritius, Mexico, Monaco, Morocco, the Netherlands, New Zealand, Niger, Peru, the Philippines, Poland, Portugal, Romania, San Marino, Singapore, Spain, Swaziland, Switzerland, Tanzania, Trinidad and Tobago, Tunisia, Uganda, the United Kingdom, the U.S.A., Uruguay and Yugoslavia.

Sport

The national game is pesäpallo, a form of baseball. Football, skiing, skating, ice hockey, athletics and bandy, a form of ice hockey, are popular sports.

Public Holidays

1978: March 24th (Good Friday), March 27th (Easter Monday), April 29th (Ascension Day), May 1st (May Day), May 14th (Whitsun), June 25th (Midsummer Day), November 5th (All Saints' Day), December 6th (Independence Day), December 25th, 26th (Christmas).

From December 1971 to February 1973 the central exchange rate was \$1=4.10 markkaa. In terms of sterling, the exchange rate was £1=10.08 markkaa from November 1967 to August 1971; and £1=10.683 markkaa from December 1971 to June 1972. In February 1973 a new exchange rate of U.S. \$1=3.90 markkaa was introduced but since June 1973 the markkaa has been allowed to "float". The average rate (markkaa per dollar) was: 3.821 in 1973; 3.774 in 1974; 3.679 in 1975; 3.864 in 1976.

THE CONSTITUTION

THE PRESIDENT

The President is elected for a term of six years by 300 electors. The electors are chosen by public vote in the same manner as members of the Parliament.

The President of the Republic is entrusted with supreme Executive power. Legislative power is exercised by the Parliament in conjunction with the President. Both the President and the Parliament have the right of initiative in legislation. Laws passed by the Parliament are submitted to the President, who has the right of veto. If the President has not within three months assented to a law, this is tantamount to a refusal of his assent. A law to which the President has not given his assent will nevertheless come into force, if the Parliament elected at the next general election adopts it without alteration.

The President has also the right to issue decrees in certain events, to order new elections to the Parliament, to grant pardons and dispensations, and to grant Finnish citizenship to foreigners.

The President's approval is necessary in all matters concerning the relations of Finland with foreign countries, and he is Supreme Commander of the Defence Forces of the Republic.

Such decisions as are arrived at by the President are made by him in the Council of State, except in matters pertaining to military functions and appointments.

GOVERNMENT

For the general administration of the country there is a Council of State, appointed by the President, and composed of the Prime Minister and the Ministers of the various Ministries. The members of the Council, who must enjoy the confidence of the Parliament, are collectively responsible to it for their conduct of affairs, and for the general policy of the administration; while each member is responsible for the administration of his own Ministry.

To this Council or Cabinet the President can appoint supernumerary Ministers, who serve either as assistant Ministers or as Ministers without portfolio. The President also appoints a Chancellor of Justice, who must see that the Council and its members act within the law. If in his opinion the Council of State or an individual Minister has acted in a manner contrary to the law, the Chancellor of Justice must report the matter to the President of the Republic or in certain cases to the Parliament. In this way Ministers are rendered legally as well as politically responsible for their official acts.

THE PARLIAMENT

The Parliament is an assembly of one chamber with 200 members elected for four years by universal suffrage on a system of proportional representation, every man and

woman who is eighteen or over being entitled to vote and everyone over twenty being eligible. It assembles annually on the 1st of February. The ordinary duration of a session is 120 days, but the Parliament can at its pleasure extend or shorten its session. The opposition of one-third of the members can cause ordinary legislative proposals to be deferred till after the next elections. Discussion of questions relating to the constitutional laws belongs also to Parliament, but for the settlement of such questions certain delaying conditions (fixed majorities) are prescribed. The Parliament, besides taking part in legislation, has the right to determine the estimates, which, though not technically a law, are published as a law.

Furthermore, the Parliament has the right, in a large measure to supervise the administration of the Government. For this purpose it receives special reports, the Government also submitting an account of its administration every year, and a special account of the administration of national finances. The Chancellor of Justice submits a yearly report on the administration of the Council of State. The Parliament elects five auditors, who submit to it annual reports of their work, to see that the estimates have been adhered to. The Parliament also appoints every four years a Parliamentary Ombudsman (*Judicial Delegate of Parliament*), who submits to it a report, to supervise the observance of the laws.

The Parliament has the right to interrogate the Government. It can impeach a member of the Council of State or the Chancellor of Justice for not having conformed to the law in the discharge of his duties. Trials are conducted at a special court, known as the Court of the Realm, of 13 members, six of whom are elected by Parliament for a term of four years.

CONSTITUTIONAL AMENDMENT

The first report of the Constitutional Committee on possible reforms of the fundamental laws was presented in April 1974. The multi-party system and the constitutional checks on revision of the fundamental laws are likely to delay any major changes until the 1980s, but several issues have emerged as potential areas for reform. Generally, the right-wing parties are suspicious of reform, but the left has won some support from the centre.

Three main topics have been discussed by the Committee: the respective powers of the President, Cabinet and Parliament; legislative procedure, particularly the strength of the protection to be given to parliamentary minorities; the basic economic, social and cultural rights of the individual and security of ownership. The Committee has also recommended the implementation of employee participation in decision-making. The most basic reform under discussion is the left's proposal that Parliament should be the supreme state organ, and that much of the President's power should be transferred to the Cabinet.

THE PRESS

The 1919 Constitution provided safeguards for press freedom in Finland, and in the same year the Freedom of the Press Act developed and qualified this principle by defining the rights and responsibilities of editors and the circumstances in which the Supreme Court may confiscate or suppress a publication. In practice there are few restrictions. The most notable offences for newspapermen concern libel and copyright. Two notable features of the press are the public's legal right of access to all official documents (with important exceptions), and since 1966 the right of the journalist to conceal his source of news.

Almost all daily newspapers are independent companies, most of which are owned by large numbers of shareholders. Newspaper chains are virtually unknown, but the Finnish press is a party press. The political alignment of the Finnish daily press is as follows (1977):

	Number	Circulation (%)
Independent	46	58.2
Centre and right-wing	24	29.8
Left-wing	18	12.0
TOTAL	88	100.0

The small number of papers which are generally considered left-oriented are usually owned by the political parties concerned, by trade unions, or by other workers' associations (the Social Democratic Party's chief organ is *Suomen Sosialidemokraatti*; and the Finnish Communist Party publishes *Kansan Uutiset*). On the other hand most of the right-wing newspapers are owned by private shareholders. Some even belong to private endowments. The leading organ of the National Coalition Party is *Aamulehti* in Tampere. The left-wing papers are subject to considerably closer influence from the parties to which they are affiliated than their right-wing counterparts. Privately owned newspapers—including some of the largest such as *Helsingin Sanomat* and *Turun Sanomat*—are usually independent of political parties. The number of votes cast in elections bears little relation to the respective circulation totals of affiliated newspapers.

Helsinki is the only large press centre, with a large number of daily papers and complete monopoly of the periodical field. Several large dailies are produced in provincial towns, as are a number of weekly and twice-weekly papers which provide an important news service to outlying areas. An important feature of the daily press is

the large amount of space devoted to foreign news and also to commentary.

In 1977 there were 88 daily newspapers in Finland with a total circulation of about 2,400,000. Twelve of these dailies are printed in Swedish. A further 136 small local non-daily papers were also registered in 1977.

In order of circulation the most popular daily papers are: *Helsingin Sanomat*, *Aamulehti*, *Turun Sanomat*, *Ilta-Sanomat*, *Savon Sanomat* and *Hufvudstadsbladet*. Those most respected for their standard of news coverage and commentary are *Helsingin Sanomat*, an independent paper and the smaller *Uusi Suomi*.

The total circulation of periodicals amounts to about 23 million copies per issue of which the business and trade press contribute 11.5 million. The largest publishers are Kustannusosakeyhtiö Apulehti, Yhtyneet Kuvalehdet Oy, Lehtimiehet Oy and Sanoma Osakeyhtiö. Consumer co-operatives use their periodicals as information media for both their members and their customers. *Pirkka*, *YV*, *Me* and *Yhteishyvä* are among the most important.

There are about 1,040 periodicals of which some 200 are in the nation's second language, Swedish. Among the leading weekly periodicals are the general interest *Apu* (299,400) and the illustrated news magazine *Suomen Kuvalehti* (84,884). The publications of the consumer co-operatives enjoy large circulations (the largest *Pirkka* (937,300) is distributed free), as do the chief women's magazines *Anna* (128,600), *Me Naiset* (124,390) and *Kotiliesi* (155,700) (1977 circulations). The more popular serious magazines include the fortnightly *Pellervo* (103,539) specializing in agricultural affairs and *Valitut Palat*, the Finnish Readers' Digest (283,800).

FINANCE

The Bank of Finland is the Bank of Issue under the guarantee and supervision of Parliament. Its Board of Management is appointed by the President of the Republic and the nine Bank Supervisors are elected by Parliament.

The Bank of Finland has very close connections with the central banks of the other Nordic countries and in 1962 an agreement was signed on short-term credits between these countries.

At the end of 1976 there were two large and five small commercial banks with 858 offices in the country and 280 savings banks.

An important part is played in the financial activities of the country by Co-operative banks. In 1976 there were 380 Co-operative banks and six mortgage banks. The savings departments of all co-operative stores accept deposits from the public.

The Postipankki is also extremely important in the life of the country. It collects the petty savings from the public through the 3,111 local post offices, the 13 offices of the Bank of Finland, as well as through its own head office and 22 branches. The National Pension Institute and 49 private insurance companies also granted credits in 1976.

STATE OWNED INDUSTRIES

There has never been any government policy in Finland to nationalize industries. Occasionally, however, it has been found necessary for various reasons to give substantial state aid in setting up a company and the state has retained a majority of shares in these companies. All are administered as limited companies, the state being represented on the Board of Management and at the General Meeting of Shareholders by either the relevant Minister or an official of the relevant Ministry.

In 1970 these companies employed 59,124 persons, about 10 per cent of the country's total industrial labour

force. Exports from the state owned companies were over 16 per cent of the country's total exports.

FRANCE

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The French Republic is situated in Western Europe and bounded to the north by the English Channel, to the east by Belgium, Luxembourg, the Federal Republic of Germany, Switzerland and Italy, to the south by the Mediterranean and Spain and to the west by the Atlantic Ocean. The island of Corsica, situated in the Mediterranean west of Italy and north of Sardinia, is part of France. Climate is temperate throughout most of the country but in the south it is of the Mediterranean type with warm summers and mild winters. The principal language is French, which has numerous regional dialects, and small minorities speak Breton or Basque. About 90 per cent of the population are Roman Catholics. There are also other Christian and Jewish communities. The national flag (proportions three by two) carries three vertical bands of blue, white and red. The capital is Paris.

Recent History

After the liberation in 1944 there was provisional unicameral government under General Charles de Gaulle. In 1946, following a referendum, the Fourth Republic was set up with the legislature composed of the National Assembly and the Council of the Republic. Gen. de Gaulle retired from public life. Twenty-six cabinets were formed during the life of the Fourth Republic which came to an end in 1958 with an insurrection in Algiers and the threat of civil war facing the country.

Invited by President Coty to form a government, Gen. de Gaulle was invested as Prime Minister to rule by decree for six months. A new constitution was approved by referendum in September 1958 and promulgated in October. The Fifth Republic came into being, with de Gaulle as its President. The new system provided a strong, stable executive. Real power rested in the hands of the President, who strengthened his authority through direct appeals to the people in national referenda.

The early years of the Fifth Republic were overshadowed by the Algerian crisis. De Gaulle put down a revolt of French army officers and granted Algeria independence in 1962. A period of relative tranquillity was ended in 1968 when dissatisfaction with the government's authoritarian policies on education and information and discontent at low wage rates and lack of social reform fused into a serious revolt of students and workers. For a month the republic was threatened, but the student movement collapsed and the general strike was settled by large wage rises. In April 1969 de Gaulle resigned after defeat in a referendum on regional reform.

Georges Pompidou was elected President in June 1969. He attempted to continue Gaullism, while also responding to the desire for change manifested in 1968. The Gaullist hold on power was threatened, however, by the Union of the Left, an alliance of the Socialist and Communist parties who had drawn up a common programme of government. In the 1973 general election the Government coalition was returned with a reduced majority.

President Pompidou died in April 1974. Elections to choose his successor were held in May. After the defeat of the Gaullist candidate in the first round of voting, the election became a fight between Valéry Giscard d'Estaing, formerly leader of the *Républicains Indépendants* (RI), supported by the Gaullist UDR and the centre parties, and François Mitterrand, leader of the Socialist party and candidate of the Union of the Left. Giscard defeated his opponent by a small margin, and chose Jacques Chirac, a member of the UDR, as his Prime Minister. A government was formed from members of the RI, the UDR and the Centre parties.

Giscard adopted a more relaxed style of government than his predecessors and promised reforms. Some important measures were adopted, including an extension of social welfare, new abortion and divorce laws and the dismantling of the ORTF, the state radio and television organization. Most of the government's energies were concentrated, however, on coping with the continuing economic crisis.

In 1976, after differences with the President, Chirac resigned his post as Prime Minister and stood successfully against the Giscardian candidate in the elections for mayor of Paris. He undertook the transformation of the UDR into a new party, the *Rassemblement pour la République* (RPR). He was replaced as Prime Minister by Raymond Barre. A reshuffle in March 1977 produced a Council of Ministers who were expected to subordinate party activities to the establishment of an election platform for 1978. The Union of the Left, which had seemed surer of mass support than the Giscardians in 1976, split in 1977 over its nationalization programme.

French foreign policy under the Fifth Republic has been marked by its assertiveness and independence. Gen. de Gaulle's chief concern was to emphasize France's "Great Power" status and national prestige. Under de Gaulle France became a nuclear power and withdrew from the military side of NATO in 1967. Pompidou largely continued these policies, although he did not share de Gaulle's hostility to the United Kingdom and the U.S.A. Giscard d'Estaing has taken still further the reconciliation with the U.S.A., but he is continuing to develop France's independent nuclear deterrent, which is based on massive retaliation rather than flexible response. France plays a leading role in the European Economic Community (EEC), of which it is a founder-member.

Overseas, France granted independence to most of its former colonies after the Second World War. In Indo-China, after prolonged fighting, Laos, Cambodia and Viet-Nam became fully independent in 1954. In Africa most of the French colonies in the West and Equatorial regions attained independence in 1960 but have retained their close economic and political ties with France. Algeria became independent after a war lasting from 1955 to 1962, when French forces were withdrawn and most of the French settlers were repatriated, many to Corsica; friction between the repatriates and nationalist Corsicans led in

August 1977 to the destruction of the Corsican television transmitter, an act which was copied by Breton nationalists in Brittany a few months later.

Government

Under the 1958 constitution, legislative power is held by the bicameral Parliament, comprising a Senate and a National Assembly. The Senate has 295 members (277 for metropolitan France, 13 for the overseas departments and territories and five for French nationals abroad) indirectly elected for nine years, one third of the seats being renewable every three years. The National Assembly has 490 members (473 for metropolitan France and 17 for overseas departments) directly elected by universal adult suffrage (using two ballots if necessary) for five years, subject to dissolution.

Executive power is held by the President. Since 1962 the President has been directly elected by popular vote (using two ballots if necessary) for seven years. The President appoints a Council of Ministers, headed by the Prime Minister, which administers the country and is responsible to Parliament.

Metropolitan France comprises 21 administrative regions containing 95 departments. There are also five overseas departments (French Guiana, Guadeloupe, Martinique, Réunion and St. Pierre and Miquelon) which are integral parts of the French Republic. Each department is administered by an appointed Prefect.

Defence

French military policy is decided by the Supreme Defence Council. Under a decree of January 1964, the Head of State, as Chairman of the Council, has direct responsibility for command of the French nuclear forces in case of atomic warfare. Military service is compulsory and lasts for 12-15 months. In 1976 the strength of the armed forces stood at 502,100, comprising: army 330,000, navy 68,500, and air force 103,600. The 1977 defence budget totalled 63,031 million francs.

Economic Affairs

The rapid growth of the French economy since the Second World War has been directed by a series of Plans, the seventh of which came into effect in 1976. Elaborated by Planning Commissions under the supervision of the *Commissariat Général du Plan*, the Plans lay down guidelines for economic development in terms both of precise production targets and of general social objectives.

France is still West Europe's leading agricultural nation, with 32 million hectares, over three-quarters of its area, under cultivation. Production has risen steadily since the Second World War at about 2 per cent per annum, while the population engaged in agriculture has declined as a proportion of the total labour force from 15 per cent in 1968 to just over 10 per cent in 1976, as a result of retirement of elderly smallholders and government-sponsored rationalization of small plots; 40 per cent of holdings are over 20 hectares. Co-operatives are very common in both supply and sales of most sectors, accounting for between a third and a half of all business. The share of animal products in total agricultural production is over 50 per cent. Maize has become an important grain crop for livestock feeding, and wine remains an important export. More than half the land is worked by owner-occupiers.

Since the Second World War French industry has expanded extremely rapidly. The largest French industries are steel (23 million tons in 1976), motor vehicles (over 3 million produced in 1976), aircraft, mechanical and electrical engineering, textiles and chemicals. Large quantities of coal and iron ore are still mined, although depressed conditions in the steel industry in 1977 led to the introduction of an emergency investment programme of 12,000 million francs and the planned reduction of 16,000 jobs, mostly in the north-east.

France has greatly increased its exports in recent years, being the world's fourth largest exporter in 1976. Its principal trade partners are the other members of the European Economic Community, especially the Federal Republic of Germany, Belgium and Italy. Energetic government action has helped win France a substantial share of the expanding Middle East export market. France is the world's third largest exporter of arms.

Owing to its dependence on imported fuel, France suffered from the energy crisis which began in 1973. Inflation soared to 15 per cent in 1974, and a massive trade deficit of 16,000 million francs resulted in a strict government credit limit and a slow-down in G.D.P. growth to 2.9 per cent in 1974, compared with 5.3 per cent in 1973. In spite of a return to a trading surplus in 1975, the recession deepened and G.D.P. fell by 1.0 per cent. Reflationary programmes, selective aid to depressed sectors (such as the motor industry, steel and aerospace) and generous regional development allocations could not prevent unemployment rising to 900,000 in September 1975, 950,000 in 1976 (including over 100,000 jobless foreign workers) and 1,039,400 by April 1977, a figure which was claimed by the trade unions to understate the true level by 500,000.

Largely owing to the effects of the severe drought of 1976 (particularly damaging to crops in the north-west) and to the importing of petroleum at an increasingly disadvantageous exchange rate, France's trade balance slipped back into deficit in 1976 and inflation increased to 9.9 per cent, compared with 9.6 per cent in 1975. By April 1977 the year-on-year inflation rate was 12.1 per cent. An over-all growth rate of 5 per cent was finally achieved in 1976, but the G.D.P. growth for 1977 was expected to be as low as 3 per cent. The 1978 budget contained measures to stimulate the economy, to reduce unemployment and fuel imports, and to control inflation by continued price controls. It was planned to reduce fuel imports by nuclear substitution and by the introduction of higher petrol taxes and a tax on electricity consumption by large firms.

Transport

There are 37,143 kilometres of railway lines and French trains hold world records for speed. In 1975 there were 1,484,690 kilometres of highway, including 3,401 kilometres of motorway. Air France, one of the world's largest airlines, provides extensive internal and external services. The French merchant marine totalled 514 vessels of over 9 million tons in 1975. There is an important network of inland waterways.

Social Welfare

France has evolved a comprehensive system of social security which is compulsory for all wage-earners, and latterly for farmers. State insurance requires contributions from both employers and employees, and provides for

sickness, unemployment, maternity, disability through industrial accident and substantial allowances for large families. War veterans receive pensions and certain privileges, and widows the equivalent of three months' salary and pension. 80 per cent of all medical practitioners adhere to the state scheme. The patient pays directly for medical treatment and prescribed medicines, and then obtains reimbursement for all or part of the cost. Sickness benefits and pensions are related to the insured person's income and the length of time he has been insured. About one-fifth of the net national product is spent in health and welfare services. Social security benefits were widely extended in 1972, particularly with regard to the self-employed and owners of small businesses. A national minimum hourly wage is in force, and is periodically adjusted to keep pace with inflation. In 1977 the Government introduced a scheme to give unemployed foreign workers a cash bonus for returning home.

Education

France is divided into 25 educational districts called Académies, each responsible for the administration of education from primary to higher in its area.

Education is compulsory and free from the age of 6-16. At 11 all pupils enter the first cycle of the *Enseignement Secondaire* with a four-year general course. At the age of 15 they may then proceed to the second cycle, choosing between the *cycle long* leading to the *baccalauréat* after three years and the *cycle court* leading to the *brevet d'études professionnelles* after two years with commercial, administrative, or industrial options. French secondary education has been academically formal with nationally uniform syllabuses and little contact between teacher and pupil. Disturbances erupted in the *Lycées* during 1968, since when reforms have been effected in the governing and disciplinary machinery of schools. A more fundamental reform, begun in 1963, entailed the gradual abolition of junior classes in the *Lycées* and the institution in their place of new junior comprehensives, *Collèges d'Enseignement Secondaire*, designed to narrow the gap between the *Lycée* and the previous alternative, the *Collège d'Enseignement Général*. From 1975 a series of reforms increased uniformity in secondary education; classes were de-streamed and cut in size, record-keeping was improved, and children were allowed to progress up the schools according to age rather than by passing the summer exams. Nursery education was increased in 1976 by 2,316 schools.

The minimum qualification for entry to University faculties is the *baccalauréat*. The first degree, the *licence*, is obtained after three years of study, and the master's degree (*maîtrise*) and doctorate after four and five years respectively. The prestigious *Grandes Ecoles* complement the universities; entry to them is by competitive examination, and they have traditionally supplied France's administrative élite. The university population increased nearly threefold between 1960 and 1968, and the universities, despite considerable growth, failed to keep abreast of the expansion of numbers. The 1968 reforms in higher education aimed to increase university autonomy and render teaching methods less formal. Overcrowding and the lack of career outlets remain among other problems, however, and it is estimated that about 70 per cent of

university entrants do not complete their courses. University grants are rare.

Primary school teachers are trained in *Ecoles Normales d'Instituteurs*. Secondary school teachers must have a *licence* or *maîtrise*. They must also sit competitive state examinations to obtain the *Certificat d'Aptitude au Professorat de l'Etude (CAPES)*, or *Agrégation*. The Government is planning to establish new institutions for the training of secondary school teachers undertaking degree courses.

Expenditure on national education was 89,000 million francs in 1977, representing almost a quarter of the national budget. It was the highest single budget for a Government Department.

Tourism

France draws tourists from all over the world. Paris is famous for its boulevards, historic buildings, theatres, art treasures, fashion houses and restaurants, and for its many music halls and night clubs. The Mediterranean and Atlantic coasts and the French Alps are the most popular tourist resorts but holidaymakers are to be found nearly everywhere during the summer. There are many ancient towns, the châteaux of the Loire, the fishing villages of Brittany and Normandy, and spas and places of pilgrimage such as Vichy and Lourdes. Corsica also attracts many tourists. Gastronomy is a tourist attraction throughout France. Following the growth of Spanish tourism, extensive tourist development has taken place in the Languedoc-Roussillon region; six new coastal resorts have been created by State and private enterprise to provide facilities for the increasing number of French holidaymakers (growing to an estimated 40 million by 1985). In 1975, 13.1 million foreign tourists visited France.

Visas are not required for nationals of the following countries: Algeria, Andorra, Argentina, Australia, Austria, Belgium, Benin, Bolivia, Brazil, Canada, the Central African Empire, Chad, Chile, Colombia, the Congo, Costa Rica, Cuba, Cyprus, Denmark, the Dominican Republic, Ecuador, El Salvador, Finland, Gabon, the Federal Republic of Germany, Greece, Haiti, Honduras, Iceland, Iran, Ireland, Israel, Italy, the Ivory Coast, Jamaica, Japan, the Republic of Korea, Liechtenstein, Luxembourg, Malaysia, Mali, Malta, Mauritania, Mexico, Monaco, Morocco, the Netherlands, New Zealand, Niger, Norway, Panama, Paraguay, Peru, the Philippines, Portugal, San Marino, Senegal, Singapore, South Africa, Spain, Sri Lanka, Sweden, Switzerland, Togo, Trinidad and Tobago, Tunisia, Turkey, the United Kingdom and Dependencies, the U.S.A., the Upper Volta, Uruguay, the Vatican City and Yugoslavia.

Sport

There is a National Sports Council to advise the Government on policy regarding sport. The State makes its contribution to the development of popular education and sport through the Secretariat of State for Youth and Sports. Football and rugby are the two most popular games.

FINANCE

100 centimes=1 French franc.

Coins: 1, 5, 10, 20 and 50 centimes; 1, 5 and 10 francs.

Notes: 10, 50, 100 and 500 francs.

Exchange rates (October 1977): £1 sterling=8.595 francs; U.S. \$1=4.835 francs.

100 French francs=£11.63=\$20.68.

Note: Between January 1960 and August 1969 the par value of the French franc was 180 milligrammes of gold, equal to 20.255 U.S. cents (U.S. \$1=4.937 francs). In August 1969 the franc was devalued to 160 milligrammes of gold, the official exchange rate being U.S. \$1=5.554 francs until August 1971. From December 1971 to February 1973 the rate was U.S. \$1=5.116 francs. Since March 1973 the French authorities have ceased to maintain the franc-dollar rate within previously agreed margins and the franc has been allowed to "float". The average exchange rate (francs per U.S. dollar) was: 4.454 in 1973; 4.810 in 1974; 4.286 in 1975; 4.780 in 1976. In terms of sterling, the central exchange rate between August 1969 and June 1972 was £1=13.330 francs.

THE CONSTITUTION OF THE FIFTH REPUBLIC

Adopted by referendum, September 28th, 1958; promulgated October 6th, 1958.

Preamble

The French people hereby solemnly proclaims its attachment to the Rights of Man and to the principles of national sovereignty as defined by the Declaration of 1789, confirmed and complemented by the Preamble of the Constitution of 1946.

By virtue of these principles and that of the free determination of peoples, the Republic hereby offers to the Overseas Territories that express the desire to adhere to them, new institutions based on the common ideal of liberty, equality and fraternity and conceived with a view to their democratic evolution.

Article 1. The Republic and the peoples of the Overseas Territories who, by an act of free determination, adopt the present Constitution thereby institute a Community.

The Community shall be based on the equality and the solidarity of the peoples composing it.

Chapter I.—On Sovereignty

Article 2. France shall be a Republic, indivisible, secular, democratic and social. It shall ensure the equality of all citizens before the law, without distinction of origin, race or religion. It shall respect all beliefs.

The national emblem shall be the tricolour flag, blue, white and red.

The national anthem shall be the "Marseillaise".
The motto of the Republic shall be "Liberty, Equality, Fraternity".

Its principle shall be government of the people, by the people, and for the people.

Article 3. National sovereignty belongs to the people, which shall exercise this sovereignty through its representatives and through the referendum.

No section of the people, nor any individual, may attribute to themselves or himself the exercise thereof.

Suffrage may be direct or indirect under the conditions stipulated by the Constitution. It shall always be universal, equal and secret.

All French citizens of both sexes who have reached their majority and who enjoy civil and political rights may vote under the conditions to be determined by law.

Article 4. Political parties and groups may compete for votes. They may form and carry on their activities freely. They must respect the principles of national sovereignty and of democracy.

Chapter II.—The President of the Republic

Article 5. The President of the Republic shall see that the Constitution is respected. He shall ensure, by his arbitration, the regular functioning of the public powers, as well as the continuity of the State.

He shall be the guarantor of national independence, of the integrity of the territory, and of respect for Community agreements and for treaties.

Article 6. The President of the Republic shall be elected for seven years by direct universal suffrage. The method of implementation of the present article shall be determined by an organic law.

Article 7. The President of the Republic shall be elected by an absolute majority of the votes cast. If such a majority

is not obtained at the first ballot, a second ballot shall take place on the second following Sunday. Those who may stand for the second ballot shall be only the two candidates who, after the possible withdrawal of candidates with more votes, have gained the largest number of votes on the first ballot.

Voting shall begin at the summons of the Government. The election of the new President of the Republic shall take place not less than twenty days and not more than thirty-five days before the expiration of the powers of the President in office. In the event that the Presidency of the Republic has been vacated for any reason whatsoever, or impeded in its functioning as officially declared by the Constitutional Council, after the matter has been referred to it by the Government and which shall give its ruling by an absolute majority of its members, the functions of the President of the Republic, with the exception of those covered by Articles 11 and 12 hereunder, shall be temporarily exercised by the President of the Senate and, if the latter is in his turn unable to exercise his functions, by the Government.

In the case of vacancy or when the impediment is declared to be final by the Constitutional Council, the voting for the new President shall take place, except in case of force majeure officially noted by the Constitutional Council, not less than twenty days and not more than thirty-five days after the beginning of the vacancy or of the declaration of the final nature of the impediment.

Articles 49 and 50 and Article 89 of the Constitution may not be put into application during the vacancy of the Presidency of the Republic or during the period between the declaration of the final nature of the impediment of the President of the Republic and the election of his successor.

Article 8. The President of the Republic shall appoint the Premier. He shall terminate the functions of the Premier when the latter presents the resignation of the Government.

At the suggestion of the Premier, he shall appoint the other members of the Government and shall terminate their functions.

Article 9. The President of the Republic shall preside over the Council of Ministers.

Article 10. The President of the Republic shall promulgate the laws within fifteen days following the transmission to the Government of the finally adopted law.

He may, before the expiration of this time limit, ask Parliament for a reconsideration of the law or of certain of its articles. This reconsideration may not be refused.

Article 11. The President of the Republic, on the proposal of the Government during [Parliamentary] sessions, or on joint motion of the two Assemblies published in the *Journal Officiel*, may submit to a referendum any bill dealing with the organization of the public powers, entailing approval of a Community agreement, or providing for authorization to ratify a treaty that, without being contrary to the Constitution, might affect the functioning of the institutions.

When the referendum decides in favour of the bill, the President of the Republic shall promulgate it within the time limit stipulated in the preceding article.

Article 12. The President of the Republic may, after consultation with the Premier and the Presidents of the

Assemblies, declare the dissolution of the National Assembly.

General elections shall take place twenty days at the least and forty days at the most after the dissolution.

The National Assembly shall convene by right on the second Thursday following its election. If this meeting takes place between the periods provided for ordinary sessions, a session shall, by right, be opened for a fifteen-day period.

There may be no further dissolution within a year following these elections.

Article 13. The President of the Republic shall sign the ordinances and decrees decided upon in the Council of Ministers.

He shall make appointments to the civil and military posts of the State.

Councillors of State, the Grand Chancellor of the Legion of Honour, Ambassadors and Envoys Extraordinary, Master Councillors of the Audit Office, prefects, representatives of the Government in the Overseas Territories, general officers, rectors of academies [regional divisions of the public educational system] and directors of central administrations shall be appointed in meetings of the Council of Ministers.

An organic law shall determine the other posts to be filled in meetings of the Council of Ministers, as well as the conditions under which the power of the President of the Republic to make appointments to office may be delegated by him to be exercised in his name.

Article 14. The President of the Republic shall accredit Ambassadors and Envoys Extraordinary to foreign powers; foreign Ambassadors and Envoys Extraordinary shall be accredited to him.

Article 15. The President of the Republic shall be commander of the armed forces. He shall preside over the higher councils and committees of national defence.

Article 16. When the institutions of the Republic, the independence of the nation, the integrity of its territory or the fulfilment of its international commitments are threatened in a grave and immediate manner and the regular functioning of the constitutional public powers is interrupted, the President of the Republic shall take the measures required by these circumstances, after official consultation with the Premier and the Presidents of the Assemblies, as well as with the Constitutional Council.

He shall inform the nation of these measures in a message.

These measures must be prompted by the desire to ensure to the constitutional public powers, in the shortest possible time, the means of accomplishing their mission. The Constitutional Council shall be consulted with regard to such measures.

Parliament shall meet by right.

The National Assembly may not be dissolved during the exercise of exceptional powers.

Article 17. The President of the Republic shall have the right of pardon.

Article 18. The President of the Republic shall communicate with the two Assemblies of Parliament by means of messages, which he shall cause to be read, and which shall not be the occasion for any debate.

Between sessions, the Parliament shall be convened especially to this end.

Article 19. The acts of the President of the Republic, other than those provided for under Articles 8 (first paragraph), 11, 12, 16, 18, 54, 56 and 61, shall be countersigned by the Premier and, should circumstances so require, by the appropriate ministers.

Chapter III.—The Government

Article 20. The Government shall determine and conduct the policy of the nation.

It shall have at its disposal the administration and the armed forces.

It shall be responsible to the Parliament under the conditions and according to the procedures stipulated in Articles 49 and 50.

Article 21. The Premier shall direct the operation of the Government. He shall be responsible for national defence. He shall ensure the execution of the laws. Subject to the provisions of Article 13, he shall have regulatory powers and shall make appointments to civil and military posts.

He may delegate certain of his powers to the ministers.

He shall replace, should the occasion arise, the President of the Republic as the Chairman of the councils and committees provided for under Article 15.

He may, in exceptional instances, replace him as the chairman of a meeting of the Council of Ministers by virtue of an explicit delegation and for a specific agenda.

Article 22. The acts of the Premier shall be countersigned, when circumstances so require, by the ministers responsible for their execution.

Article 23. The functions of Member of the Government shall be incompatible with the exercise of any parliamentary mandate, with the holding of any office, at the national level, in business, professional or labour organizations, and with any public employment or professional activity.

An organic law shall determine the conditions under which the holders of such mandates, functions or employments shall be replaced.

The replacement of the members of Parliament shall take place in accordance with the provisions of Article 25.

Chapter IV.—The Parliament

Article 24. The Parliament shall comprise the National Assembly and the Senate.

The deputies to the National Assembly shall be elected by direct suffrage.

The Senate shall be elected by indirect suffrage. It shall ensure the representation of the territorial units of the Republic. Frenchmen living outside France shall be represented in the Senate.

Article 25. An organic law shall determine the term for which each Assembly is elected, the number of its members, their emoluments, the conditions of eligibility, and the system of ineligibilities and incompatibilities.

It shall likewise determine the conditions under which, in the case of a vacancy in either Assembly, persons shall be elected to replace the deputy or senator whose seat has been vacated until the holding of new complete or partial elections to the Assembly concerned.

Article 26. No Member of Parliament may be prosecuted, searched for, arrested, detained or tried as a result of the opinions or votes expressed by him in the exercise of his functions.

No Member of Parliament may, during parliamentary session, be prosecuted or arrested for criminal or minor offences without the authorization of the Assembly of which he is a member except in the case of *flagrante delicto*.

When Parliament is not in session, no Member of Parliament may be arrested without the authorization of the Secretariat of the Assembly of which he is a member, except in the case of *flagrante delicto*, of authorized prosecution or of final conviction.

The detention or prosecution of a Member of Parliament shall be suspended if the Assembly of which he is a member so demands.

Article 27. Any compulsory vote shall be null and void.

The right to vote of the members of Parliament shall be personal.

The organic law may, under exceptional circumstances, authorize the delegation of a vote. In this case, no member may be delegated more than one vote.

Article 28. Parliament shall convene by right in two ordinary sessions a year.

The first session shall begin on the first Tuesday of October and shall end on the third Friday of December.

The second session shall open on the last Tuesday of April; it may not last longer than three months.

Article 29. Parliament shall convene in extraordinary session at the request of the Premier or of the majority of the members comprising the National Assembly, to consider a specific agenda.

When an extraordinary session is held at the request of the members of the National Assembly, the closure decree shall take effect as soon as the Parliament has exhausted the agenda for which it was called, and at the latest twelve days from the date of its meeting.

Only the Premier may ask for a new session before the end of the month following the closure decree.

Article 30. Apart from cases in which Parliament meets by right, extraordinary sessions shall be opened and closed by decree of the President of the Republic.

Article 31. The members of the Government shall have access to the two Assemblies. They shall be heard when they so request.

They may call for the assistance of Commissioners of the Government.

Article 32. The President of the National Assembly shall be elected for the duration of the legislature. The President of the Senate shall be elected after each partial re-election [of the Senate].

Article 33. The meetings of the two Assemblies shall be public. An *in extenso* report of the debates shall be published in the *Journal Officiel*.

Each Assembly may sit in secret committee at the request of the Premier or of one-tenth of its members.

Chapter V.—On Relations Between Parliament and the Government

Article 34. Laws shall be voted by Parliament.

They shall establish the regulations concerning:

Civil rights and the fundamental guarantees granted to the citizens for the exercise of their public liberties; the obligations imposed by the national defence upon the person and property of citizens;

Nationality, status and legal capacity of persons, marriage contracts, inheritance and gifts;

Determination of crimes and misdemeanours as well as the penalties imposed therefor; criminal procedure; amnesty; the creation of new juridical systems and the status of magistrates;

The basis, the rate and the methods of collecting taxes of all types; the issue of currency.

They likewise shall determine the regulations concerning:

The electoral system of the Parliamentary Assemblies and the local assemblies;

The establishment of categories of public institutions;

The fundamental guarantees granted to civil and military personnel employed by the State;

The nationalization of enterprises and the transfers of the property of enterprises from the public to the private sector.

Laws shall determine the fundamental principles of:

The general organization of national defence;

The free administration of local communities, of their competencies and their resources;

Education;

Property rights, civil and commercial obligations;

Legislation pertaining to employment, unions and social security.

The financial laws shall determine the financial resources and obligations of the State under the conditions and with the reservations to be provided for by an organic law.

Laws pertaining to national planning shall determine the objectives of the economic and social action of the State.

The provisions of the present article may be detailed and supplemented by an organic law.

Article 35. Parliament shall authorize the declaration of war

Article 36. Martial law shall be decreed in a meeting of the Council of Ministers.

Its prorogation beyond twelve days may be authorized only by Parliament.

Article 37. Matters other than those that fall within the domain of law shall be of a regulatory character.

Legislative texts concerning these matters may be modified by decrees issued after consultation with the Council of State. Those legislative texts which shall be passed after the entry into force of the present Constitution shall be modified by decree only if the Constitutional Council has stated that they have a regulatory character as defined in the preceding paragraph.

Article 38. The Government may, in order to carry out its programme, ask Parliament for authorization to take through ordinances, during a limited period, measures that are normally within the domain of law.

The ordinances shall be enacted in meetings of Ministers after consultation with the Council of State. They shall come into force upon their publication but shall become null and void if the bill for their ratification is not submitted to Parliament before the date set by the enabling act.

At the expiration of the time limit referred to in the first paragraph of the present article, the ordinances may be modified only by the law in those matters which are within the legislative domain.

Article 39. The Premier and the Members of Parliament alike shall have the right to initiate legislation.

Government bills shall be discussed in the Council of Ministers after consultation with the Council of State and shall be filed with the secretariat of one of the two Assemblies. Finance bills shall be submitted first to the National Assembly.

Article 40. The bills and amendments introduced by the Members of Parliament shall be inadmissible when their adoption would have as a consequence either a diminution of public financial resources or an increase in public expenditure.

Article 41. If it shall appear in the course of the legislative procedure that a Parliamentary bill or an amendment is not within the domain of law or is contrary to a delegation granted by virtue of Article 38, the Government may declare its inadmissibility

In case of disagreement between the Government and the President of the Assembly concerned, the Constitutional Council, upon the request of one or the other, shall rule within a time limit of eight days.

Article 42. The discussion of bills shall pertain, in the first Assembly to which they have been referred, to the text presented by the Government.

An Assembly given a text passed by the other Assembly shall deliberate on the text that is transmitted to it.

Article 43. Government and Parliamentary bills shall, at the request of the Government or of the Assembly concerned, be sent for study to committees especially designated for this purpose.

Government and Parliamentary bills for which such a request has not been made shall be sent to one of the permanent committees, the number of which is limited to six in each Assembly.

Article 44. Members of Parliament and of the Government have the right of amendment.

After the opening of the debate, the Government may oppose the examination of any amendment which has not previously been submitted to committee.

If the Government so requests, the Assembly concerned shall decide, by a single vote, on all or part of the text under discussion, retaining only the amendments proposed or accepted by the Government.

Article 45. Every Government or Parliamentary bill shall be examined successively in the two Assemblies of Parliament with a view to the adoption of an identical text.

When, as a result of disagreement between the two Assemblies, it has been impossible to adopt a Government or Parliamentary bill after two readings by each Assembly, or, if the Government has declared the matter urgent, after a single reading by each of them, the Premier shall have the right to bring about a meeting of a joint committee composed of an equal number from both Assemblies charged with the task of proposing a text on the matters still under discussion.

The text elaborated by the joint committee may be submitted by the Government for approval of the two Assemblies. No amendment shall be admissible except by agreement with the Government.

If the joint committee does not succeed in adopting a common text, or if this text is not adopted under the conditions set forth in the preceding paragraph, the Government may, after a new reading by the National Assembly and by the Senate, ask the National Assembly to rule definitively. In this case, the National Assembly may reconsider either the text elaborated by the joint committee, or the last text voted by it, modified when circumstances so require by one or several of the amendments adopted by the Senate.

Article 46. The laws that the Constitution characterizes as organic shall be passed and amended under the following conditions:

A Government or Parliamentary bill shall be submitted to the deliberation and to the vote of the first Assembly notified only at the expiration of a period of fifteen days following its introduction;

The procedure of Article 45 shall be applicable. Nevertheless, lacking an agreement between the two Assemblies, the text may be adopted by the National Assembly on final reading only by an absolute majority of its members;

The organic laws relative to the Senate must be passed in the same manner by the two Assemblies;

The organic laws may be promulgated only after a declaration by the Constitutional Council on their constitutionality.

Article 47. The Parliament shall pass finance bills under the conditions to be stipulated by an organic law.

Should the National Assembly fail to reach a decision on first reading within a time limit of forty days after a bill has been filed, the Government shall refer it to the Senate, which must rule within a time limit of fifteen days. The procedure set forth in Article 45 shall then be followed.

Should Parliament fail to reach a decision within a time limit of seventy days, the provisions of the bill may be enforced by ordinance.

Should the finance bill establishing the resources and expenditures of a fiscal year not be filed in time for it to be promulgated before the beginning of that fiscal year, the Government shall urgently request Parliament for the authorization to collect the taxes and shall make available by decree the funds needed to meet the Government commitments already voted.

The time limits stipulated in the present article shall be suspended when the Parliament is not in session.

The Audit Office shall assist Parliament and the Government in supervising the implementation of the finance laws.

Article 48. The discussion of the bills filed or agreed upon by the Government shall have priority on the agenda of the Assemblies in the order determined by the Government.

One meeting a week shall be reserved, by priority, for questions asked by Members of Parliament and for answers by the Government.

Article 49. The Premier, after deliberation by the Council of Ministers, shall make the Government responsible, before the National Assembly, for its programme or, should the occasion arise, for a declaration of general policy.

When the National Assembly adopts a motion of censure, the responsibility of the Government shall thereby be questioned. Such a motion is admissible only if it is signed by at least one-tenth of the members of the National Assembly. The vote may not take place before forty-eight hours after the motion has been filed. Only the votes that are favourable to a motion of censure shall be counted; the motion of censure may be adopted only by a majority of the members comprising the Assembly. Should the motion of censure be rejected, its signatories may not introduce another motion of censure during the same session, except in the case provided for in the paragraph below.

The Premier may, after deliberation by the Council of Ministers, make the Government responsible before the National Assembly for the adoption of a vote of confidence. In this case, this vote of confidence shall be considered as adopted unless a motion of censure, filed during the twenty-four hours that follow, is carried under the conditions provided for in the preceding paragraph.

The Premier shall have the right to request the Senate for approval of a declaration of general policy.

Article 50. When the National Assembly adopts a motion of censure, or when it disapproves the programme or a declaration of general policy of the Government, the Premier must hand the resignation of the Government to the President of the Republic.

Article 51. The closure of ordinary or extraordinary sessions shall by right be delayed, should the occasion arise, in order to permit the application of the provisions of Article 49.

Chapter VI.—On Treaties and International Agreements

Article 52. The President of the Republic shall negotiate and ratify treaties.

He shall be informed of all negotiations leading to the conclusion of an international agreement not subject to ratification.

Article 53. Peace treaties, commercial treaties, treaties or agreements relative to international organization, those that commit the finances of the State, those that modify provisions of a legislative nature, those relative to the status of persons, those that call for the cession, exchange or addition of territory may be ratified or approved only by a law.

They shall go into effect only after having been ratified or approved.

No cession, no exchange, no addition of territory shall be valid without the consent of the populations concerned.

Article 54. If the Constitutional Council, the matter having been referred to it by the President of the Republic, by the Premier, or by the President of one or the other Assembly, shall declare that an international commitment contains a clause contrary to the Constitution, the authorisation to ratify or approve this commitment may be given only after amendment of the Constitution.

Article 55. Treaties or agreements duly ratified or approved shall, upon their publication, have an authority superior to that of laws, subject, for each agreement or treaty, to its application by the other party.

Chapter VII.—The Constitutional Council

Article 56. The Constitutional Council shall consist of nine members, whose mandates shall last nine years and shall not be renewable. One-third of the membership of the Constitutional Council shall be renewed every three years. Three of its members shall be appointed by the President of the Republic, three by the President of the National Assembly, three by the President of the Senate.

In addition to the nine members provided for above, former Presidents of the Republic shall be members *ex officio* for life of the Constitutional Council.

The President shall be appointed by the President of the Republic. He shall have the deciding vote in case of a tie.

Article 57. The office of member of the Constitutional Council shall be incompatible with that of minister or Member of Parliament. Other incompatibilities shall be determined by an organic law.

Article 58. The Constitutional Council shall ensure the regularity of the election of the President of the Republic.

It shall examine complaints and shall announce the results of the vote.

Article 59. The Constitutional Council shall rule in the case of disagreement, on the regularity of the election of deputies and senators.

Article 60. The Constitutional Council shall ensure the regularity of the referendum procedure and shall announce the results thereof.

Article 61. Organic laws, before their promulgation, and regulations of the parliamentary Assemblies, before they come into application, must be submitted to the Constitutional Council, which shall rule on their constitutionality.

To the same end, laws may be submitted to the Constitutional Council, before their promulgation, by the President of the Republic, the Premier, the President of the National Assembly, the President of the Senate, or any sixty deputies or sixty senators.

In the cases provided for by the two preceding paragraphs, the Constitutional Council must make its ruling

within a time limit of one month. Nevertheless, at the request of the Government, in case of urgency, this period shall be reduced to eight days.

In these same cases, referral to the Constitutional Council shall suspend the time limit for promulgation.

Article 62. A provision declared unconstitutional may not be promulgated or implemented.

The decisions of the Constitutional Council may not be appealed to any jurisdiction whatsoever. They must be recognised by the public powers and by all administrative and juridical authorities.

Article 63. An organic law shall determine the rules of organization and functioning of the Constitutional Council, the procedure to be followed before it, and in particular of the periods of time allowed for laying disputes before it.

Chapter VIII.—On Judicial Authority

Article 64. The President of the Republic shall be the guarantor of the independence of the judicial authority.

He shall be assisted by the High Council of the Judiciary.

An organic law shall determine the status of magistrates. Magistrates may not be removed from office.

Article 65. The High Council of the Judiciary shall be presided over by the President of the Republic. The Minister of Justice shall be its Vice-President *ex officio*. He may preside in place of the President of the Republic.

The High Council shall, in addition, include nine members appointed by the President of the Republic in conformity with the conditions to be determined by an organic law.

The High Council of the Judiciary shall present nominations for judges of the Court of Cassation [Supreme Court of Appeal] and for First Presidents of courts of appeal. It shall give its opinion under the conditions to be determined by an organic law on proposals of the Minister of Justice relative to the nominations of the other judges. It shall be consulted on questions of pardon under conditions to be determined by an organic law.

The High Council of the Judiciary shall act as a disciplinary council for judges. In such cases, it shall be presided over by the First President of the Court of Cassation.

Article 66. No one may be arbitrarily detained.

The judicial authority, guardian of individual liberty, shall ensure the respect of this principle under the conditions stipulated by law.

Chapter IX.—The High Court of Justice

Article 67. A High Court of Justice shall be instituted.

It shall be composed, in equal number, of members elected, from among their membership, by the National Assembly and by the Senate after each general or partial election to these Assemblies. It shall elect its President from among its members.

An organic law shall determine the composition of the High Court, its rules, as well as the procedure to be applied before it.

Article 68. The President of the Republic shall not be held accountable for actions performed in the exercise of his office except in the case of high treason. He may be indicted only by the two Assemblies ruling by identical vote in open balloting and by an absolute majority of the members of said Assemblies. He shall be tried by the High Court of Justice.

The members of the Government shall be criminally liable for actions performed in the exercise of their office and rated as crimes or misdemeanours at the time they

were committed. The procedure defined above shall be applied to them, as well as to their accomplices, in case of a conspiracy against the security of the State. In the cases provided for by the present paragraph, the High Court shall be bound by the definition of crimes and misdemeanours, as well as by the determination of penalties, as they are established by the criminal laws in force when the acts are committed.

Chapter X.—The Economic and Social Council

Article 69. The Economic and Social Council, at the referral of the Government, shall give its opinion on the Government bills, ordinances and decrees, as well as on the Parliamentary bills submitted to it.

A member of the Economic and Social Council may be designated by the latter to present, before the Parliamentary Assemblies, the opinion of the Council on the Government or Parliamentary bills that have been submitted to it.

Article 70. The Economic and Social Council may likewise be consulted by the Government on any problem of an economic or social character of interest to the Republic or to the Community. Any plan, or any bill dealing with a plan, of an economic or social character shall be submitted to it for its advice.

Article 71. The composition of the Economic and Social Council and its rules of procedure shall be determined by an organic law.

Chapter XI.—On Territorial Units

Article 72. The territorial units of the Republic shall be the communes, the Departments, and the Overseas Territories. Any other territorial unit shall be created by law.

These units shall be free to govern themselves through elected councils and under the conditions stipulated by law.

In the Departments and the Territories, the Delegate of the Government shall be responsible for the national interests, for administrative supervision, and for seeing that the laws are respected.

Article 73. Measures of adjustment required by the particular situation of the Overseas Departments may be taken with regard to the legislative system and administrative organization of those Departments.

Article 74. The Overseas Territories of the Republic shall have a particular organization, taking account of their own interests within the general interests of the Republic. This organization shall be defined and modified by law after consultation with the Territorial Assembly concerned.

Article 75. Citizens of the Republic who do not have ordinary civil status, the only status referred to in Article 34, may keep their personal status as long as they have not renounced it.

Article 76. The Overseas Territories may retain their status within the Republic.

If they express the desire to do so by decision of their Territorial Assemblies taken within the time limit set in the first paragraph of Article 91, they shall become either Overseas Departments of the Republic or, organized into groups among themselves or singly, member States of the Community.

Chapter XII.—On the Community

Article 77. In the Community instituted by the present Constitution, the States shall enjoy autonomy; they shall administer themselves and, democratically and freely, manage their own affairs.

There shall be only one citizenship in the Community.

All citizens shall be equal before the law, whatever their

origin, their race and their religion. They shall have the same duties.

Article 78. The Community shall have jurisdiction over foreign policy, defence, the monetary system, common economic and financial policy, as well as the policy on strategic raw materials.

In addition, except by special agreement, control of justice, higher education, the general organization of external and common transport, and telecommunications shall be within its jurisdiction.

Special agreements may establish other common jurisdictions or regulate the transfer of jurisdiction from the Community to one of its members.

Article 79. The member States shall benefit from the provisions of Article 77 as soon as they have exercised the choice provided for in Article 76.

Until the measures required for implementation of the present title go into force, matters within the common jurisdiction shall be regulated by the Republic.

Article 80. The President of the Republic shall preside over and represent the Community.

The Community shall have, as organs, an Executive Council, a Senate and a Court of Arbitration.

Article 81. The member States of the Community shall participate in the election of the President according to the conditions stipulated in Article 6.

The President of the Republic, in his capacity as President of the Community, shall be represented in each State of the Community.

Article 82. The Executive Council of the Community shall be presided over by the President of the Community. It shall consist of the Premier of the Republic, the heads of Government of each of the member States of the Community, and of the ministers responsible for the common affairs of the Community.

The Executive Council shall organize the co-operation of members of the Community at Government and administrative levels.

The organization and procedure of the Executive Council shall be determined by an organic law.

Article 83. The Senate of the Community shall be composed of delegates whom the Parliament of the Republic and the legislative assemblies of the other members of the Community shall choose from among their own membership. The number of delegates of each State shall be determined, taking into account its population and the responsibilities it assumes in the Community.

The Senate of the Community shall hold two sessions a year, which shall be opened and closed by the President of the Community and may not last more than one month each.

The Senate of the Community, upon referral by the President of the Community, shall deliberate on the common economic and financial policy, before laws in these matters are voted upon by the Parliament of the Republic, and, should circumstances so require, by the legislative assemblies of the other members of the Community.

The Senate of the Community shall examine the acts and treaties or international agreements, which are specified in Articles 35 and 53, and which commit the Community.

The Senate of the Community shall take enforceable decisions in the domains in which it has received delegation of power from the legislative assemblies of the members of the Community. These decisions shall be promulgated in the same form as the law in the territory of each of the States concerned.

An organic law shall determine the composition of the Senate and its rules of procedure.

Article 84. A Court of Arbitration of the Community shall rule on litigations occurring among members of the Community.

Its composition and its competence shall be determined by an organic law.

Article 85. By derogation from the procedure provided for in Article 89, the provisions of the present title that concern the functioning of the common institutions shall be amendable by identical laws passed by the Parliament of the Republic and by the Senate of the Community.

The provisions of the present title may also be revised by agreements concluded between all states of the Community: the new provisions are enforced in the conditions laid down by the Constitution of each state.

Article 86. A change of status of a member State of the Community may be requested, either by the Republic, or by a resolution of the legislative assembly of the State concerned confirmed by a local referendum, the organization and supervision of which shall be ensured by the institutions of the Community. The procedures governing this change shall be determined by an agreement approved by the Parliament of the Republic and the legislative assembly concerned.

Under the same conditions, a Member State of the Community may become independent. It shall thereby cease to belong to the Community.

A Member State of the Community may also, by means of agreement, become independent without thereby ceasing to belong to the Community.

An independent State which is not a member of the Community may, by means of agreements, adhere to the Community without ceasing to be independent.

The position of these States within the Community is determined by the agreements concluded for that purpose, in particular the agreements mentioned in the preceding paragraphs as well as, where applicable, the agreements provided for in the second paragraph of article 85.

Article 87. The particular agreements made for the implementation of the present title shall be approved by the Parliament of the Republic and the legislative assembly concerned.

Chapter XIII.—On Agreements of Association

Article 88. The Republic or the Community may make agreements with States that wish to associate themselves with the Community in order to develop their own civilisations.

Chapter XIV.—On Amendment

Article 89. The initiative for amending the Constitution shall belong both to the President of the Republic on the proposal of the Premier and to the Members of Parliament.

The Government or Parliamentary bill for amendment must be passed by the two Assemblies in identical terms. The amendment shall become definitive after approval by a referendum.

Nevertheless, the proposed amendment shall not be submitted to a referendum when the President of the Republic decides to submit it to Parliament convened in Congress; in this case, the proposed amendment shall be approved only if it is accepted by a three-fifths majority of the votes cast. The Secretariat of the Congress shall be that of the National Assembly.

No amendment procedure may be undertaken or followed if it is prejudicial to the integrity of the territory.

The republican form of government shall not be the object of an amendment.

Chapter XV.—Temporary Provisions

Article 90. The ordinary session of Parliament is suspended. The mandate of the members of the present National Assembly shall expire on the day that the Assembly elected under the present Constitution convenes.

Until this meeting, the Government alone shall have the authority to convene Parliament.

The mandate of the members of the Assembly of the French Union shall expire at the same time as the mandate of the members of the present National Assembly.

Article 91. The institutions of the Republic, provided for by the present Constitution, shall be established within four months counting from the time of its promulgation.

This period shall be extended to six months for the institutions of the Community.

The powers of the President of the Republic now in office shall expire only when the results of the election provided for in Articles 6 and 7 of the present Constitution are proclaimed.

The member States of the Community shall participate in this first election under the conditions derived from their status at the date of the promulgation of the Constitution.

The established authorities shall continue in the exercise of their functions in these States according to the laws and regulations applicable when the Constitution goes into force, until the establishment of the authorities provided for by their new regimes.

Until its definitive constitution, the Senate shall consist of the present members of the Council of the Republic. The organic laws that shall determine the definitive constitution of the Senate must be passed before July 31st, 1959.

The powers conferred on the Constitutional Council by Articles 58 and 59 of the Constitution shall be exercised, until the establishment of this Council, by a committee composed of the Vice-President of the Council of State, as Chairman, the First President of the Court of Cassation, and the First President of the Audit Office.

The peoples of the member States of the Community shall continue to be represented in Parliament until the entry into force of the measures necessary to the implementation of Chapter XII.

Article 92. The legislative measures necessary to the establishment of the institutions and, until they are established, to the functioning of the public powers, shall be taken in meetings of the Council of Ministers, after consultation with the Council of State, in the form of ordinances having the force of law.

During the time limit set in the first paragraph of Article 91, the Government shall be authorised to determine, by ordinances having the force of law and passed in the same way, the system of elections to the Assemblies provided for by the Constitution.

During the same period and under the same conditions, the Government may also adopt measures, in all domains, which it may deem necessary to the life of the nation, the protection of citizens or the safeguarding of liberties.

ELECTORAL LAW, 1958

The Deputies of the National Assembly for Metropolitan France are elected under a single-member constituency system, with two ballots where the first does not produce an absolute majority. A candidate requires a simple majority in the second ballot to be successful. There are 465 individual constituencies, each with approximately 93,000 electors. Any candidate polling less than 5 per cent of the votes loses his deposit.

The Overseas Territories elect their representatives under the old system of proportional representation.

JUDICIAL SYSTEM

The Judiciary is independent of the Government. Judges of the Court of Cassation and the First President of the Court of Appeal are appointed by the executive from nominations of the High Council of the Judiciary.

Subordinate cases are heard by **Tribunals of Instance** (*tribunaux d'instance*), of which there are 454, and more serious cases by **Tribunals of Great Instance** (*tribunaux de grande instance*), of which there are 175. Parallel to these Great Tribunals are the **Tribunals of Commerce** (*tribunaux de commerce*), for commercial cases, composed of judges elected by tradesmen and manufacturers among themselves. These do not exist in every district. Where there is no Tribunal of Commerce, commercial disputes are judged by Tribunals of Great Instance.

The **Boards of Arbitration** (*Conseils de Prud'hommes*) consist of an equal number of workers or employees and employers ruling on the differences which arise over Contracts of Work.

The **Correctional Courts** (*Tribunaux correctionnels*) for criminal cases correspond to the Tribunal of Great Instance for civil cases. They pronounce on all graver offences (*délits*), including those involving imprisonment.

Offences committed by juveniles of under 18 years go before specialized tribunals: **Tribunals for Children**.

From all these Tribunals appeal lies to the **Courts of Appeal** (*Cours d'Appel*).

The **Courts of Assize** (*Cours d'Assises*) have no regular sittings, but are called when necessary to try every important case, for example, murder. They are presided over by judges who are members of the Courts of Appeal and composed of elected judges (jury). Their decision is final, except where shown to be wrong in law, and then recourse is had to the **Court of Cassation** (*Cour de Cassation*).

The **Court of State Security** (*Cour de Sécurité de l'Etat*) consists, generally, of three civil magistrates, the President and two members being general or superior officers; this

court has jurisdiction over crimes and misdemeanours against the Security of the State in peace time; its decisions are then sent to the **Court of Cassation** (*Cour de Cassation*).

The Court of Cassation is not a supreme court of appeal but a higher authority for the proper application of the law. Its duty is to see that judgments are not contrary either to the letter or the spirit of the law; any judgment annulled by the Court of Cassation involves the trying of the case anew by a court of the same category as that which made the original decision.

THE PRESS

The legislation under which the French press operates mostly dates back to an Act of 1881 which established very liberal conditions for journalism, asserting the right of individuals to produce newspapers without any prior authorization. At the same time the law defined certain offences which the press might commit, such as incitement to crime, disturbance of the peace by the publication of false information, libel and defamation, the publication of material offensive to the President and revealing official secrets. Further legislation in the 1940s somewhat extended these restrictions on the press, particularly with regard to children's literature, but neither the new laws nor the authoritarianism of the Fifth Republic have inhibited the critical vitality of French journalism.

An estimated 14,000 newspapers and periodicals are published in France. In 1975 there were nine general daily papers published in Paris which had a national circulation and some 85 provincial dailies covering all the French regions. The aggregate circulations of the two groups were 3.8 million for the Parisian press and 7.5 million for the provincial press. These figures showed a remarkable decline from the situation in 1946 when 28 Parisian dailies had a circulation of 5 million and 175 provincial dailies shared 9 million circulation. In recent years sharply rising costs and falling advertising revenue have increased the difficulties caused by declining circulation. Despite tax exemption and subsidies from the

government, worth 1,135 million francs in 1974, many newspapers face severe economic problems. *Le Monde* was the only Parisian daily still increasing its circulation and making a profit in 1975; but in 1976/77 three new daily papers were founded in Paris.

The provincial press, already strong under the Third Republic, achieved a leading role during the German occupation (1940-44), when Paris was cut off from the rest of France. Since the war, it has proved more adept than the national press at dealing with the fall in revenue and rising costs. The best-selling provincial dailies can now almost match the most popular Paris dailies for circulation and they have initiated various rationalization schemes. Six groups of provincial papers have been formed to pool advertising and, in some cases, copy and printing facilities. The largest of these groups are the one centred on *Le Dauphiné Libéré* (Grenoble) and *Le Progrès* (Lyon) and the group in East France led by *L'Est Républicain*.

The weekly news magazines have expanded in recent years; the two best examples of this are *L'Express* and *Le Nouvel Observateur*. Large-circulation illustrated magazines such as *Paris-Match* have suffered from the competition of television and traditional women's magazines have had difficulty adapting to the new attitudes of French women.

The only major daily which acts as the organ of a political party is the Communist paper, *L'Humanité*. All

Hersant Group: one of the largest of the provincial daily press groups; owns 12 dailies, 9 provincial weeklies and fortnightly and 11 magazines; dailies include *Centre-Presse*, *L'Eclair*, *Nord-Matin*, *Nord-Eclair* and *Paris-Normandie*; has a majority holding in *Le Figaro* and *France-Soir*; also publishes various magazines.

Del Duca Group: 2 rue des Italiens, 75009 Paris; owns several popular magazines, including *Nous Deux*, *Intimité*, women's and children's journals, including *Modes de Paris*, and also *Télé-Poche*.

Bayard Presse: 3. rue Bayard, Paris 8e; important Catholic press group; owns the national *La Croix*, *Le Pèlerin du XXe Siècle*, *Panorama d'Aujourd'hui*, important magazines for young people and several specialized religious publications.

Express Group: 45 per cent owned by Général Occidentale (Chair. Sir James Goldsmith); Pres. Mme. EMILE SERVAN-SCHREIBER.

Filipacchi Group: 63 ave. Champs Elysées, Paris 8e; controls a number of large circulation magazines including *Paris-Match*, *Salut les Copains*, *Mademoiselle Age Tendre*, *Lui*, and *Photo*.

Among the metropolitan dailies, the outstanding papers are *Le Monde* (432,000), which carries no pictures, and *Le Figaro* (350,000). The most popular are *France-Soir* (727,000) and *Le Parisien Libéré* (786,000). The English language *International Herald Tribune* (121,000) is also important. The major provincial dailies are *Ouest-France* published at Rennes (640,000), *Le Progrès* at Lyons (436,000), *Le Dauphiné Libéré* at Grenoble (362,000), *La Voix du Nord* at Lille (389,000) and *Sud-Ouest* at Bordeaux (383,000), which cater for rural readership by producing local subsidiary editions.

Metropolitan weekly papers range from the popular press, such as *France-Dimanche* (1,054,000) and *Ici-Paris* (900,000), through the more serious current affairs magazines like *L'Express*, *Le Nouvel Observateur* and the satirical *Canard Enchaîné*, to the literary and cultural *Figaro Littéraire*. Among the popular periodicals must be mentioned the weekly illustrated *Paris-Match* (645,000) and the women's journals *Marie-Claire* (678,000), *Elle* (532,000) and *Marie-France* (412,000).

RADIO AND TELEVISION

Broadcasting in France is a state monopoly. From 1964 to 1974 it was run by the *Office de Radiodiffusion-Télévision Française* (ORTF), under the tutelage of the Ministry of Information. The ORTF met with increasing difficulties and criticism from 1968 onwards. It was subject to repeated strikes, accusations of political bias from both the right and the left and scandalous revelations of economic mismanagement. In 1972, following disclosures of clandestine advertising in programmes, a new statute was adopted reorganizing the ORTF into eight separate administrative units under a Chairman, who was to guarantee the freedom of the office from government control. In 1973, however, the Chairman, Arthur Conte, was summarily dismissed after a disagreement with the Minister of Information. The new Chairman, Marceau Long, was given a brief to bring into effect the decentralization of the ORTF which had been decided upon in 1972. His implementation of these measures was interrupted in May 1974 by the election of a new President of the Republic. One of the first acts of the new administration was to introduce legislation for the dissolution of the ORTF and its replacement by seven independent state-financed companies. The law was passed in August and the seven companies came into operation on January 1st, 1975. They comprise four organizations with responsibility for programmes (one for each television channel and one for radio), an audio-visual institute, a company responsible for carrying out major production work for the radio and television institutions, and an establishment with general responsibility for broadcasting. Each company has its own budget and an administrative council composed of two representatives of the state, and one representative each of parliament, the press and the staff, excepting the *Etablissement Public de Diffusion* which has a larger council. The first and second television channels are partly financed by advertising.

TéléDiffusion de France: 21-27 rue Barbès, 92120 Montreuil; f. 1975; responsible for broadcasting programmes produced by the production companies (Radio France, TF1, A2, FR3), for the organization and maintenance of the networks, for study and research into radio and television equipment, and for representing French state broadcasting in international organizations; administrative council comprising 16 members, of which eight are representatives of the state; Pres. RADIO

HOME SERVICES

France-Inter: Entertains and informs. Broadcasts transmitted for 24 hours a day; they can be received by 98 per cent of the population and by listeners outside France.

There are two main programmes, *France-Inter* and *France-Inter Variétés*. Other specialized and regional items are also produced.

France-Inter is broadcast on long, medium and short waves and *France-Inter Variétés* is broadcast on medium wave and high fidelity (frequency modulated) transmitters.

France Culture: Serious programme on art, culture and thought; broadcasts can be received by 95 per cent of the population.

France Musique: Transmission on frequency modulation transmitters. Nearly 95 per cent of the programme is devoted to music; there are regular stereophonic transmissions.

Radio-Sorbonne: Low power transmission of educational programmes. Only available in the Paris region.

There are nine regional stations which relay Parisian programmes as well as regional broadcasts. Strasbourg radio includes daily broadcasts in German.

There are 21 local radio stations. There are broadcasts in France for foreign workers in Portuguese, Arabic, Serbo-Croat, Spanish, Turkish and Italian.

In 1974 there were a total of 51 transmitters with amplitude modulation and 196 with frequency modulation.

FOREIGN SERVICES

Broadcasts in German and Spanish to Europe. Broadcasts in English to N. Africa, W. Africa, Central and E. Africa. Broadcasts in French: Beam 1 Dakar; Beam 2 Abidjan; Beam 3 Brazzaville; Beam 4 Antananarivo; Beam 5 Cairo; also Morocco, Algeria and Tunisia.

PRIVATE RADIO

Despite the state monopoly of broadcasting within France, a number of radio stations based in countries on France's perimeter have very large French audiences. These include notably *R.T.L.* (Luxembourg), *Europe No. 1* (Saarbrücken), *Radio Monte Carlo* (Monaco), *Radio Andorre* and *Sud-Radio* (Andorra). The French Government has major shareholdings in *Europe No. 1* and *R.T.L.*

Number of receivers (1975): 17,032,000.

TELEVISION

There are three state-run channels.

On the first channel transmission is on a 819-line system and covers 98.5 per cent of the population. The channel began a gradual conversion to colour broadcasting in 1976.

FRANCE

The second channel is on a 625-line system in colour and 96.5 per cent of the population can receive it.

There are 135 transmitting stations and about 3,000 relay stations for the first two channels.

The third network, introduced in 1973, is on a 625-line system in colour and 70 per cent of the population can receive it.

Number of sets (1975): 13,760,000.

Radio and Television, Finance

Télé-Luxembourg, Télé-Belge and *Télé-Monte-Carlo* have large regional audiences in France. German-speaking inhabitants of Alsace watch programmes from the Federal Republic.

OVERSEAS TELEVISION SERVICE

Programmes are produced in Martinique, Guadeloupe, Guiana, Réunion, New Caledonia, Saint Pierre and Miquelon and French Polynesia.

TRANSPORT

RAILWAYS

Most of the French railways are controlled by the SNCF which took over the activities of the five largest railway companies in 1937. These companies still exist and have a 49 per cent share of the capital of the SNCF and three seats on the Board of Directors. The SNCF is divided into five *Réseaux* (Systems) which are further subdivided into 25 *Régions* (areas), all under the direction of a general headquarters in Paris. In December 1976 the SNCF operated 34,700 km. of track, 9,374 km. of which were electrified. The Parisian transport system is controlled by a separate authority, the RATP (*Régie Autonome des Transports Parisiens* and *Syndicat des Transports Parisiens*). A number of small railways in the provinces are run by independent organizations.

CIVIL AVIATION

NATIONAL AIRLINES

Air France: 1 square Max Hymans, 75741 Paris; f. 1933; Chair. PIERRE GIRAUDET; Man. Dir. GILBERT PÉROL; Deputy Man. Dirs. JEAN ROUBAID, MARC MAUGARS, GUY PELTIER, JEAN-LOUIS RATTIER, JEAN-CLAUDE MARTIN; fleet (1977) 3 Concorde, 15 Boeing 747/100, 2 747/200F, 16 707/320, 6 707/320B, 11 707/320C, 20 707/200, 2 737/200, 8 Airbus, 28 Caravelle; international, European and intercontinental services; flights to Africa, Madagascar, Americas, Middle and Far East and West Indies.

Air-Inter: 232 rue de Rivoli, 75041 Paris-Cedex 1; f. 1954; operates internal services within metropolitan France; Air France and the S.N.C.F. are the part owners; fleet (1977) 2 Airbus, 10 Mercure, 18 Caravelle; Pres. ROBERT VERGNAUD; Dir.-Gen. RENÉ LAPAUTRE.

There are international airports at Orly, Roissy and Le Bourget (Paris), Bordeaux, Lyons, Marseilles and Nice.

PRIVATE AIRLINES

Union de Transports Aériens (U.T.A.): 50 rue Arago, 92806 Puteaux; f. 1963; Chair. FRANCIS FABRE; Pres. ANTOINE VEIL; services to West and South Africa, Middle and Far East, Australia, New Caledonia, New Zealand, Fiji, Tahiti, Samoas and the West Coast of the U.S.A.; fleet of 9 DC-8, 1 Caravelle and 4 DC-10.

Nineteen small private companies provide regional air services. About 70 international airlines service France.

Small private airlines flying services outside France include:

Air Alpes: Aéroport de Chambéry, Aix-les-Bains 73420 Le Viviers du Lac; f. 1961; Chair. HENRI ZIEGLER.

Air Alsace: 68 Aéroport de Colman-Houssen; f. 1962; Pres. GUY DOPFF.

PRINCIPAL ORCHESTRA

Orchestre de Paris: 15 ave. Montaigne, 75008 Paris; f. 1967; Dir. DANIEL BARENBOIM.

ATOMIC ENERGY

Commissariat à l'Energie Atomique (Atomic Energy Commissariat): 29-33 rue de la Fédération, Paris 15e; f. 1945; Admin.-Gen. (Government Delegate) ANDRÉ GRAUD; Sec.-Gen. PIERRE PELLETIER.

The Commissariat is under the direct authority of the Ministry of Industry and Research. It is a public corporation with administrative and financial autonomy, with responsibilities in scientific research, technical development and industry in the nuclear field.

Under the second five-year atomic energy plan (1957-61), it was arranged that the Commissariat should cease to have sole responsibility for atomic energy in France. This responsibility is now shared by other corporations (including Electricité de France) which are entrusted with the realization and exploitation of the main productions of nuclear electricity.

Administration is in the hands of a fifteen-member *Comité de l'Energie Atomique* (Atomic Energy Committee), consisting of government officials and representatives of science and industry.

In 1977 there were violent protests at the installation of a new series of reactors, the first two sited at Fessenheim.

Advisory Agencies to the Commissariat

Scientific Council: Pres. JACQUES YVON.

Mines Committee: Pres. Prof. MARCEL ROUBAULT.

Advisory Commission for Nuclear Electricity Production: Pres. JEAN COUTURE.

Markets: Pres. EUGÈNE FALLER.

There also function within the Commissariat the following departments:

Délégué à la mission Matières Nucléaires (Directorate of Nuclear Materials): Dir. M. TARANGER.

Délégué à la mission Applications Militaires (Directorate of Military Uses): Dir. M. CHEVALLIER.

Délégué à la mission Recherche Fondamentale (Directorate of Fundamental Research): Dir. M. HOROWITZ.

Délégué à la mission Protection et Sécurité Nucléaires (Directorate of Radiological protection and security): Dir. M. GAUVENET.

Délégué à la mission Applications Industrielles Nucléaires (Directorate of Nuclear Industrial Applications): Dir. M. PECQUEUR.

Délégué à la mission Coopération Industrielle non Nucléaire (Directorate of non-Nuclear Industrial Co-operation): Dir. M. NOLLET.

Délégué à la mission Programmes d'Intérêt Général (Directorate of General Programmes): Dir. M. BALLIGAND.

Institut National des Sciences et Techniques Nucléaires (National Institute of Nuclear Science and Technology): B.P. 6, 91190 Gif-sur-Yvette; f. 1956; Dir. J. BERGERARD.

The National Institute of Nuclear Science and Technology organizes courses on atomic engineering, special metallurgy, advanced analytical chemistry, structure mechanics, reactor physics, research and development economics, nuclear medicine and pharmacy.

Centre d'Etudes Nucléaires de Cadarache (Cadarache Nuclear Research Station): B.P. 1, 13115 Saint-Paul-lès-Durance, Bouches-du-Rhône; f. 1960; Dir. A. JUNCA.

Centre d'Etudes Nucléaires de Fontenay-aux-Roses (Fontenay-aux-Roses Nuclear Research Centre): B.P. 6, Fontenay-aux-Roses 92260; f. 1945; Dir. J. ASTY.

Centre d'Etudes Nucléaires de Grenoble (GEN-G) (Grenoble Nuclear Research Centre): BP 85, Centre de Tri, 38041 Grenoble-Cédex; f. 1956; staff 2,400; basic and applied research; three swimming-pool open-core reactors (35 mW., 8 mW., 100 kW.); 40 laboratories; Dir. a.i. ROBERT GERBIER.

Centre d'Etudes Nucléaires de Saclay (CENS) (Saclay Nuclear Research Centre): B.P. 2, 91190 Gif-sur-Yvette; f. 1949; Dir. PAUL BONNET.

The four Research Centres are equipped with reactors, the Grenoble Centre having been established as a means of associating the universities with the advancement of nuclear science and avoiding the over-centralization of research. The Centre of Nuclear Studies at Cadarache is devoted to industrial nuclear research, both for electric generation and for propulsion. Fundamental research is also carried out in the fields of radiological safety, radio ecology and radioagronomy.

Centre National de la Recherche Scientifique (CNRS): There are several nuclear research centres attached to this institution, and the largest nuclear laboratory complex is situated at Strasbourg.

Groupe de Laboratoires de Strasbourg-Cronembourg: rue du Loess, B.P. 20 CRO, 67037 Strasbourg Cédex; f. 1957; Dirs. P. DEJOURS, B. METZ, G. MONSonego, J. H. VIVIEN, A. GALLMANN.

GERMAN DEMOCRATIC REPUBLIC

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The German Democratic Republic is bounded to the north by the Baltic Sea, to the west, south-west and south by the Federal Republic of Germany, to the south-east by Czechoslovakia and to the east by Poland along the line of the rivers Oder and Neisse. The climate is warm in summer with cold winters. The language is German. About 50 per cent of the population are Protestant (mainly belonging to the Evangelical Church) and 10 per cent Roman Catholic. The national flag (proportions 5 by 3) carries three equal horizontal bands of black, red and gold, bearing in the centre the coat of arms showing a hammer and compass on a wreath of grain. The capital is Berlin (the German Democratic Republic having jurisdiction only in the eastern section of the city).

Recent History

The unconditional surrender of the German Third Reich in May 1945 ended the Second World War. At the Potsdam Conference in June 1945 it was decided that, pending a final delimitation of Poland's western frontier, the former German territories east of the Oder and Neisse rivers and the city of Danzig should become part of Poland, and that the northern half of East Prussia should be annexed by the U.S.S.R. Germany was divided into British, French, Soviet and U.S. occupation zones, as was Berlin. The whole country was placed under Allied Administration but, after the failure of negotiations to form a unified German administration, the zones occupied by the Western allies merged to form the Federal Republic of Germany in September 1949. In the following month the Soviet zone proclaimed itself the German Democratic Republic, with Wilhelm Pieck as President and Otto Grotewohl as Prime Minister. These two men were joint chairmen of the Socialist Unity Party of Germany (SED), which had been formed in 1946 by the merger of the Communist Party and the Social Democratic Party in the Soviet Zone. The SED has been the dominant political force since that time.

Walter Ulbricht took office as the Secretary-General of the SED in 1950, becoming First Secretary of the Party's Central Committee in 1953. He became Head of State in September 1960. Ulbricht retired as Party leader in May 1971, being replaced by Erich Honecker, whose title was changed to General Secretary in May 1976.

The immediate post-war period was marked by a process of denazification and nationalization. Many industrial enterprises became state-owned, and under the land-reform measures large areas of landed property were taken over by the state and converted to various types of collective farming. The early years of the G.D.R. were severe for the population. Much war damage had been inflicted upon the industrial capacity of the territory, which had anyway been primarily an agricultural area of the Reich. Large sections of the industry which remained were transported to the Soviet Union as part of the heavy reparations.

With these economic burdens, and the Government's concerted drive to build heavy industry, the standard of living remained low and in 1953 popular discontent led to

uprisings in East Berlin and other cities. These were suppressed by Soviet troops, and the Government modified its economic policy towards an improvement in living standards. With a continual outflow of refugees, the population declined—a situation particularly worrying to the Government since many of the refugees were from the skilled labour force and the professions. In 1961 the stream of refugees leaving the G.D.R. via West Berlin was halted by the construction of a wall between East and West Berlin, thus completing the G.D.R.'s control of its frontiers. In the ensuing years, and particularly since the introduction of the "New Economic System" in 1963, the G.D.R. has brought about its own economic miracle and emerged as the most dynamic economy in Eastern Europe.

The G.D.R. became a member of the Council for Mutual Economic Assistance (CMEA) in 1950 and signed the Warsaw Pact (Eastern European Mutual Assistance Treaty) in May 1955. Under the Soviet-East German Treaty of October 1955 the U.S.S.R. recognized the G.D.R. as a sovereign state and the G.D.R. took responsibility for the control of its frontiers with Federal Germany. A Treaty of Friendship and Mutual Assistance between the G.D.R. and the U.S.S.R., concluded in 1964, was renewed for 25 years in 1976. Similar treaties exist between the G.D.R. and other East European countries.

In 1970, with the adoption by the SPD Government in Federal Germany of a new policy towards Eastern Europe (*Ostpolitik*), talks were held for the first time since the division of Germany between representatives of the two German states. Further such talks, following a Quadrupartite Agreement on West Berlin in September 1971, clarified the details of access rights to West Berlin and also allowed West Berliners to visit the G.D.R. The two states signed a Basic Treaty in December 1972, agreeing to develop normal good-neighbourly relations with each other on the basis of equality of rights and to be guided by the United Nations Charter. In March 1974, a further agreement was signed in Bonn, implementing Article 8 of the Basic Treaty, to set up Permanent Representative Missions in Bonn and East Berlin. These agreements opened the way for many Western countries to establish diplomatic relations with the G.D.R. and for the G.D.R. to join the UN in September 1973.

After the elections in October 1976 Erich Honecker was named Chairman of the Council of State by the new Parliament (*Volkshammer*).

Government

Under the 1968 constitution, the supreme organ of state power is the *Volkshammer* (People's Chamber), a unicameral body of 500 members, including 434 elected for five years by universal adult suffrage and 66 representatives from East Berlin, elected by the City Assembly. The Chamber elects a 25-member *Staatsrat* (Council of State) to be its permanent organ. The Chairman of the Council of State is the G.D.R.'s Head of State.

The executive branch of government is the *Ministerrat* (Council of Ministers), under a Chairman (Minister-

President) appointed by the Chamber, which also approves his appointed Ministers. The Council's work is directed by a Presidium of 16 members.

Political power is held by the Socialist Unity (Communist) Party of Germany, the SED, which dominates the National Front of Democratic Germany (including four minor parties and four mass organizations). The SED's highest authority is the Party Congress, which elects the Central Committee (145 full members and 55 candidate members were elected in May 1976) to supervise Party work. The Central Committee elects a Political Committee (*Politbüro*), with 19 full members and nine candidate members, to direct its policy.

For local government, the country is divided into 14 districts (*Bezirke*) and the city of East Berlin.

Defence

A National People's Army, comprising land, sea and air forces, was created out of the People's Police in 1956. Total strength is 157,000 comprising army 105,000, navy 16,000, air force 36,000. Military service lasts eighteen months. There are also about 48,000 border troops, 25,000 security troops and about 500,000 members of the Workers Militia. Defence estimates for 1977 totalled 11,023 million DDR-Marks, of which 7,868 million Marks were for national defence and 3,155 million Marks for domestic public security. The G.D.R. is a member of the Warsaw Pact.

Economic Affairs

The Republic has been a member of the Council for Mutual Economic Assistance (CMEA) since 1950, and the economy of the country is closely linked with that of the Soviet Union and other member countries. In 1975 the G.D.R. and the U.S.S.R. agreed to co-ordinate their Five-Year Plans for 1976-80. In 1976 only 25 per cent of the G.D.R.'s over-all trade was with western countries, 10 per cent being with Federal Germany. However, quality products, such as optical goods, electronic apparatus and precision machinery, are finding a growing market outside CMEA countries.

In 1976 manufacturing contributed 60 per cent of the Net Material Product, and in terms of production the G.D.R. is one of the world's leading industrial nations. Industrial production increased ninefold between 1949 and 1975 and grew by 5.9 per cent in 1976, reaching the envisaged target. Industrial growth slowed in 1977, with the engineering and consumer goods sectors and the food industry failing to achieve their targets. The machine, chemical and heavy engineering industries are leading exporters. Electronics and shipbuilding are important new industries. By 1972 99 per cent of the G.D.R.'s industry was state-owned, and all farmers are now members of agricultural production co-operatives.

The only major natural resource is lignite, which supplies over 60 per cent of the G.D.R.'s basic energy. The G.D.R. has the only lignite coking plant in the world, and is now putting into operation a second nuclear power station. The coal stocks have been exhausted and all coal mines had been closed by the end of 1977. The U.S.S.R. supplies oil by pipeline.

The 1976-80 Five-Year Plan envisages an annual growth rate in national income of 5 per cent. This was

achieved in 1975, but in 1976 the growth rate was only 3.7 per cent. Reasons for the shortfall were poor agricultural production, due to the 1976 drought, and increased import prices.

The 1976 trade deficit totalled U.S. \$1,835 million, a 50 per cent rise on the 1975 deficit. In 1975 the CMEA started adjusting its export prices for some commodities to the average of the previous five years' world market prices on an annual basis, and this caused prices of raw materials imported from the U.S.S.R. to double by 1976. The price of Soviet crude petroleum imported by the G.D.R. increased four-fold in the three years to 1976. The 1976-80 Five-Year Plan envisages a 50 per cent increase in exports to other CMEA countries.

Transport and Communications

There is a comprehensive transport system by rail, road, waterway and air. In 1976 there were 14,307 kilometres of railway, about 10 per cent of which were electrified. In the same year there were 47,530 kilometres of classified roads, of which 1,585 kilometres were motorway (*Autobahn*). There were also 2,546 kilometres of navigable inland waterways. Dresden, Riesa, Magdeburg and Berlin are the most important river ports. The principal seaport, Rostock, is being developed to carry more of East Europe's trade with the rest of the world. In 1975 the G.D.R.'s merchant fleet had 198 ships (excluding passenger vessels), with a displacement of over 1.5 million gross tons. The Interflug airline company operates 4 international airports and 52 routes are covered.

Social Welfare

State social insurance is compulsory for all employees. It also covers their dependants and special classes such as students. The scheme provides for medical and dental treatment, sick pay, maternity grants, old age, disability, and bereavement pensions. A five-day working week is now constitutionally enforced, and the paid annual holiday of between eighteen and twenty-four days can be spent at one of the 1,245 vacation centres, which are administered by the Confederation of Free German Trade Unions. Youth services and sport receive large State subsidies.

Education

Education in the G.D.R. plans to cater for children from early childhood to the completion of a university course. Children between the ages of 1 and 3 can be accommodated in crèches if their mothers are working, and in nursery schools from the ages of 4 to 6. In 1975 the replacement of elementary and secondary schools by ten-year comprehensive schools was completed. Children from the age of 6 now receive at least ten years of free education.

After ten years at a comprehensive school a pupil may apply to stay for a further two years to take the *Abitur* (advanced level examination), which is necessary for admission to establishments of higher education. Those leaving school after ten years may serve either a two- or a three-year apprenticeship, thus qualifying for enrolment respectively at a technical school or at a university or college.

Courses at technical schools are generally of three years' duration and lead to professional qualifications. Courses at institutions of university status (these include colleges of technology, engineering and agriculture, teacher training

GERMAN DEMOCRATIC REPUBLIC

colleges and art schools as well as seven actual universities) last for either four or five years, the first two years being dedicated to basic and general study, and the remainder to specialization. Day-release, correspondence and evening courses are designed to allow people to obtain a degree without interrupting their career.

Tourism

Tourism is promoted by the State Travel Bureau. The island of Rügen off the Baltic coast has considerable tourist traffic. The mountains of Thuringia and the Erzgebirge on the Czech frontier are much visited both in summer and winter. During 1975 more than 16 million people visited the G.D.R., including 8 million from non-socialist countries. Most of these, however, were West Germans. The non-commercial exchange rate, applicable to tourism, was U.S. \$1=2.30 DDR-Marks in 1977.

Sport

Sport in all forms is actively encouraged and there is a special State Committee for Physical Education and Sport. The German Gymnastics and Sports Federation incorporates all amateur sports in 36 specialized organizations.

Introductory Survey, Statistical Survey

Most of the 8,114 clubs belonging to the Federation (1976) are sponsored by the Army and police or by factories. Football, swimming and table tennis are among the most popular sports.

Public Holidays

1978: March 24th (Good Friday), May 1st (May Day), May 15th (Whit Monday), October 7th (GDR National Day), December 25th, 26th (Christmas), December 31st (half day, New Year's Eve).

1979: January 1st (New Year's Day).

Weights and Measures

The metric system is in force.

Currency and Exchange Rates

100 Pfennige = 1 Mark der Deutschen Demokratischen Republik (DDR-Mark).

Exchange rates (October 1977):

£1 sterling = 3.265 DDR-Marks.

U.S. \$1 = 1.84 DDR-Marks.

THE CONSTITUTION

The Constitution of the German Democratic Republic was promulgated on April 9th, 1968, replacing the original Constitution which came into force when the Republic was founded in 1949. It was amended on October 7th, 1974. A summary is given below.

I FOUNDATIONS OF THE SOCIALIST SOCIAL AND STATE ORDER

Political Foundations (Articles 1-8)

The German Democratic Republic is a socialist state of workers and farmers. It is the political organization of the working people in town and countryside who are jointly implementing socialism under the leadership of the working class and its Marxist-Leninist party. The capital is Berlin; the State flag is black, red, and gold, and bears the State coat of arms. All political power in the Republic is

exercised by the working people and all power serves their welfare. The National Front of the German Democratic Republic unites all political parties and mass organizations working for the development of the socialist state. Citizens exercise their political power through democratically elected people's representatives. The Republic pursues a peaceful foreign policy and is linked irrevocably and permanently with the U.S.S.R. and other socialist states.

Economic Foundations, Science, Education and Culture (Articles 9-18)

The national economy is based on the socialist ownership of the means of production and is a socialist planned economy. All foreign economic relations are the monopoly of the state. All large industrial enterprises, mineral resources, banks and means of transport are nationally owned and private ownership of these facilities is not

allowed. All installations, machinery and livestock in agricultural co-operatives and profits derived from co-operative use of the soil are co-operative property. The personal property of citizens and the right of inheritance are guaranteed. The Republic promotes culture, the arts and science and assures all citizens a high standard of education.

II CITIZENS AND ORGANIZATIONS IN SOCIALIST SOCIETY

Basic Rights and Basic Duties of Citizens (Articles 19-40)

The Republic respects the dignity and freedom of the individual and guarantees to all citizens the exercise of their rights. The conditions for acquiring and losing citizenship of the German Democratic Republic are stipulated by law. All citizens are equal before the law. Men and women have equal rights and the same legal status. Every citizen who has reached the age of 18 on election day has the right to vote and may be elected to the local people's representative bodies. Persons over the age of 21 may be elected to the People's Chamber (*Volkskammer*). Every citizen is obliged to serve in defence of his country. The Republic can grant political asylum to citizens of other states in certain circumstances.

Freedom of speech, the press, radio and television are guaranteed, as is the right to peaceful demonstration and assembly. Personal liberty is inviolable and everyone has the right to move freely within the state territory within the framework of the law. Postal and telecommunication privacy is assured and may be limited only for purposes of state security or criminal prosecution. Every citizen has the right to legal protection by the organs of the state when he is abroad.

The right to work is guaranteed and every citizen is free to select his own job. Everyone has the same right to education and attendance at secondary school is obligatory. All citizens are entitled to leisure time and annual paid holiday, to medical and other social welfare benefits. Social care is provided for the elderly and disabled. Housing is under public control and there is legal protection against eviction. Every citizen has the right of the inviolability of his home. Marriage, motherhood and the family have the special protection of the state and provision is made for large families, fatherless families, etc. Religious freedom is assured. Citizens of the German Democratic Republic of Sorb nationality have the right to cultivate their mother tongue and culture.

Enterprises, Towns and Local Communities in Socialist Society (Articles 41-43)

Enterprises, towns, villages and communal associations are entities with responsibilities of their own in which citizens work and shape their social relations. They safeguard the basic rights of citizens and are protected by the constitution. The local representative bodies are elected by the people and are responsible for local affairs. The working people also co-operate in the management of enterprises both directly and with the help of their elected organs.

The Trade Unions and Their Rights (Articles 44-45)

The free trade unions are united in the Confederation of Free German Trade Unions. They are independent bodies, are represented at all levels of the social system and play a decisive part in the solution of problems. They conclude agreements with government authorities and enterprise managements on all questions concerning the working and living conditions of the people. They take part in the

shaping of the socialist legal system and administer the social insurance system of the workers.

Socialist Production Co-operatives and Their Rights (Article 46)

These are voluntary associations of farmers for the purpose of joint production and receive government assistance. They are represented in the state organs and take an active part in the state planning. Production co-operatives on the same lines also exist among fishermen, craftsmen and market gardeners.

III STRUCTURE AND SYSTEM OF STATE MANAGEMENT

The People's Chamber (Volkskammer) (Articles 48-65)

The People's Chamber is the supreme organ of state power and guarantees the enforcement of its laws. It is composed of 500 deputies elected by the people in a free, general, equal and secret ballot for a period of five years. It is convened not later than the 30th day after the election. It elects its Presidium to conduct the plenary sessions for the legislative period. The People's Chamber can be dissolved before the expiration of the legislative period only on its own decision.

Committees are formed from among the members of the People's Chamber to discuss bills and to co-operate in submitting them to the voters for popular discussion. They then submit their comments to the plenary session of the People's Chamber. Laws passed are proclaimed in the Law Gazette by the Chairman of the Council of State within one month and come into force on the fourteenth day after their proclamation.

The People's Chamber decides on proclamation of war and the holding of referenda.

The Council of State (Staatsrat) (Articles 66-75)

The Council of State is the organ of the People's Chamber, operating between sessions of the latter, and fulfils all fundamental tasks resulting from its laws and decisions. It is elected by the People's Chamber at its first session and is responsible to it for its activities. It deals with bills to be submitted to the People's Chamber and deals with all basic tasks arising from its laws and decisions. It makes fundamental decisions on defence matters and exercises control over the constitutionality and legality of the activities of the Supreme Court and the Prosecutor General. The Council of State represents the G.D.R. internationally and ratifies and abrogates international treaties. It determines military and diplomatic ranks and other special titles and establishes state honours. It also exercises the right of amnesty and pardon.

The Council of Ministers (Ministerrat) (Articles 76-80)

The Council of Ministers, the Government of the G.D.R., is an organ of the People's Chamber. Acting on its behalf, it directs government policy, economic affairs and foreign policy in accordance with the provisions of the Constitution. It prepares international treaties, draws up Bills, directs and co-ordinates the Ministries and other government bodies. It is answerable to the People's Chamber.

Local People's Representative Bodies and Their Organs (Articles 81-85)

The elected organs of state power in the districts, towns, regions, municipal boroughs and local communities are responsible for deciding on all local issues on the basis of law. The local people's representative bodies draw up and implement the economic plan and budget for their areas, and have their own income. Their decisions are binding and must be published. All such bodies elect their own councils and committees.

IV SOCIALIST LEGALITY AND THE ADMINISTRATION OF JUSTICE

(Articles 86-104)

The Constitution has the force of law and legal regulations may not contradict it. Details of all laws and binding regulations are published, and at no time may organs other than those provided by the Constitution be allowed to exercise state power. The citizens' participation in the administration of justice is guaranteed and it is the declared aim of socialist society to combat all violations of the law. Laws on the punishment of crimes against peace, humanity and war crimes correspond to the generally recognized norms of international law.

The administration of justice in the Republic is exercised by the Supreme Court, the District Courts, the Regional Courts and the social (lay) courts. In military matters jurisdiction is exercised by the Supreme Court, military tribunals and military courts. The Supreme Court is the highest organ of the administration of justice and is responsible to the People's Chamber. All judges are democratically elected by the people's representative bodies or by the citizens themselves and must be men of knowledge and experience who are loyally devoted to the socialist state. The public prosecutors' office safeguards socialist legality and ensures that persons who have committed crimes are called to account before the court. The

public prosecutors' office is directed by the Prosecutor General and the public prosecutors of the districts and regions are appointed by him and subordinate to him.

An act is punishable only if it contravened penal law at the time of its commission, if the offender has acted in a culpable way and if his guilt is proved beyond doubt. Persons under arrest must be brought before a judge within twenty-four hours of their arrest and only judges are authorized to judge the admissibility of detention on remand. Nobody may be denied the right to appear before his lawful judge and special courts are inadmissible. Every citizen has the right to be heard in court and the right to be defended by a counsel is guaranteed throughout the whole criminal procedure. Any citizen or organization has the right to submit suggestions or grievances to the authorities and may suffer no disadvantages as a result. Damages inflicted on a citizen or his personal property as a result of unlawful measures by government officials are to be compensated by the authority concerned.

CONCLUDING PROVISIONS

(Articles 105-106)

The Constitution may be amended only through a law of the People's Chamber of the German Democratic Republic which expressly amends or supplements the text of the Constitution.

JUDICIAL SYSTEM

The legal system of the German Democratic Republic was reorganized after 1945, at first under four-power direction; and the principles on which the judicial system is to function are embodied in the Constitution. Judges are elected by the people's representative bodies. State Prosecuting Counsels are nominated by the Prosecutor-General. Jurisdiction is exercised by the Supreme Court, by the *Bezirk* Courts, by the *Kreis* Courts and by the Social Courts. All Courts consist of one presiding and two assistant magistrates. The Assistant Magistrates in the first instance are lay judges from all classes and strata of society. The Labour Law Tribunal of the Supreme Court appoints two official judges and three lay judges.

Judges are independent and subject only to the Constitution and the Legislature. A judge can be recalled only if he has committed a breach of the law, grossly neglected his duties or been convicted by a court.

Lay judges are nominated by the democratic parties and organizations. In meetings of the working people which are held in connection with the elections of the *Kreistage*, *Stadtverordnetenversammlungen*, *Stadtbezirksverordnetenversammlungen* and *Gemeindevertretungen*, the lay judges are elected for the electoral period of these people's representations; the lay judges of the *Bezirk* Courts are elected by the *Bezirkstag*; the lay judges of the Labour Law Tribunal of the Supreme Court, by the *Volkskammer*. All are equally authorized judges.

Attached to the *Volkskammer* is a Constitutional and

Legislature Commission in which all parties are represented according to their numbers. In addition there are on the Commission three members of the Supreme Court as well as three State Law Teachers who may not be members of the *Volkskammer*. All members of the Constitutional and Legislature Commission are appointed by the *Volkskammer*.

The whole judicial and penal system was reformed on January 12th, 1968 (amended December 19th, 1974), the most important reform being the introduction of a new Criminal Code to replace the German Criminal Code of 1871. A new Civil Code, replacing the Junker Code of 1896, was approved in June 1975 and came into force in early 1976. Further details will be found in the Constitution section (*above*).

THE ROMAN CATHOLIC CHURCH

It is estimated that about ten per cent of the population of the Democratic Republic are Roman Catholics, the majority of them in the South.

It was announced in October 1976 that a "Berlin Bishops' Conference" would be established for the G.D.R. bishops, who had been unable to attend the German Conference of Bishops, held twice a year in the Federal Republic.

Bishop of Berlin: ALFRED Cardinal BENGSCHE (108 Berlin, Französische Str. 34).

Bishop of Meissen: GERHARD SCHAFFRAN (8057 Dresden, Dresdener Str. 66).

Apostolic Administrator in Görlitz: Bischof BERNHARD HUHN (89 Görlitz, Amselgrund 9).

Apostolic Administrator in Erfurt-Meiningen: Bischof HUGO AUFDERBECK (50 Erfurt, Hermannsplatz 9).

Apostolic Administrator in Magdeburg: Bischof JOHANNES GEORG BRAUN (30 Magdeburg, Beethovenstr. 4).

Apostolic Administrator in Schwerin: Bischof HEINRICH THEISSING (27 Schwerin, Lankover Str. 14).

THE JEWISH COMMUNITY

It is estimated that the Jewish Community in the Democratic Republic numbers about 5,000.

Verband der Jüdischen Gemeinden in der D.D.R. (*Union of Jewish Communities in the G.D.R.*): 806 Dresden, Bautzner Strasse 20; Pres. HELMUT ARIS; publ. *Nachrichtenblatt* (quarterly).

Jüdische Gemeinde von Gross-Berlin (*Union of Greater Berlin*): 104 Berlin, Oranienburgerstr. 28; Pres. Dr. PETER KIRCHNER.

THE PRESS

In 1947 the *Presseamt* (Press Administration Office) was founded, closely associated with the office of the Prime Minister. Its functions were: to issue licences to approved organizations belonging to the democratic bloc; to distribute newsprint; and to give a measure of editorial direction to non-political papers. By means of this Office the Government acquired a considerable degree of control over the press, reinforced by the Press Section of the Socialist Unity Party's Central Committee whose function is to issue daily instructions to editors of political papers as to which news items require emphasis and comment. This elaborate system of directives is seen as ensuring that the press serves the interest of the whole community in furthering the socialist cause by precluding the possible self-interest and irresponsibility of private individuals.

The 1968 Constitution of the German Democratic Republic guarantees the freedom of the press, radio and television, and states that every citizen of the G.D.R. has the right, "in accordance with the spirit and aims of the Constitution, to express his opinion freely and publicly. This right is not limited by any service or employment relationship. No person may be placed at a disadvantage for exercising this right". From these statements it follows that there is no right to express an opinion which is not "in accordance with the spirit and aims of the Constitution", or, in other words, which can be interpreted as contrary to the interests and development of the Socialist state defined in the Constitution. Editors, who are personally responsible for the content of their papers, and citizens alike realize their obligations, responsibilities and dependence upon the state, society and political system in which they live. For these reasons, formal censorship is not practised.

All newspapers and periodicals are owned and managed by political or independent organizations such as party committees, trade unions, cultural associations, youth organizations, etc. Almost all dailies are controlled by or affiliated to a political party, such as *Neues Deutschland* (Socialist Unity Party), *Der Morgen* (Liberal Democratic Party), *National-Zeitung* (National Democratic Party) and *Neue Zeit* (Christian Democratic Union). *Tribüne* is the organ of the Trade Unions League. The Free German Youth publishes the daily *Junge Welt* and the weekly *Forum*. The official news agency, the *Allgemeiner Deutscher Nachrichtendienst*, became a state monopoly in 1946.

About 40 dailies appear in the G.D.R., with a total circulation of about 8 million. There are 31 weeklies, with a circulation of 8.2 million, and 515 other periodicals and illustrated magazines, with a circulation of 178 million. There is no sensational popular press and though most papers' news coverage is quite serious, the breadth of coverage is restricted by the policy, enunciated by *Neues Deutschland*, of concentrating on news judged to be of interest and value to the public. In January 1975 several of the leading dailies were forced to stop publishing Sunday editions due to the high prices of newsprint.

The most important and influential dailies are those published by the Socialist Unity Party, headed by *Neues Deutschland* in Berlin, and by the Berlin organs of the other parties mentioned above. Though circulation figures are often not disclosed, a very popular paper is *Berliner Zeitung am Abend*. Leading dailies outside Berlin are *Sächsische Zeitung* (Dresden), *Leipziger Volkszeitung* (Leipzig), *Freie Presse* (Karl-Marx-Stadt), *Freiheit* (Halle), *Östliche Zeitung* (Rostock) and *Freies Wort* (Suhl).

The daily press is more influential, particularly in political matters, than the weekly press and periodicals. Outstanding amongst these latter categories are *Wochen-*

post, *Horizont*, *Sonntag* and *Forum*, the popular *Neue Berliner Illustrierte* and the women's *Für Dich*.

THE FEDERAL REPUBLIC OF GERMANY AND WEST BERLIN

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Federal Republic of Germany lies in the heart of Europe. Its neighbours to the west are the Netherlands, Belgium, Luxembourg and France, to the south Switzerland and Austria, to the east Czechoslovakia and the German Democratic Republic, and to the north Denmark. The climate is temperate, with an average annual temperature of 9°C (48°F), although there are considerable variations between the North German lowlands and the Bavarian Alps. The language is German. About 44 per cent of the population belongs to the Evangelical (Protestant) Church, 45 per cent to the Roman Catholic Church, and the remainder to smaller religious groups. The national flag (proportions 5 by 3) consists of three horizontal stripes of black, red and gold. The seat of government is Bonn.

Recent History

After the defeat of the Third Reich in 1945, Germany was divided according to the Berlin Agreement into American, Soviet, British and French occupation zones. Berlin was similarly divided. After the failure of negotiations to establish a unified German administration, the three Western-occupied zones were integrated economically in 1948. A provisional constitution, the *Grundgesetz* (Basic Law), came into force in the three zones (excluding Saarland) in May 1949. The Federal Republic of Germany (F.R.G.) was established on September 21st, 1949, although its sovereignty was limited by the continuing Allied military occupation. In October 1949 the Soviet-occupied zone of Germany declared itself the German Democratic Republic, with the Soviet-occupied zone of Berlin as its capital. This left the remainder of Berlin, known as West Berlin, as an island of the F.R.G. in G.D.R. territory. Following the establishment of the Federal Republic, the military occupation was converted into a contractual defence relationship. The Paris Agreement of 1954 gave full sovereign status to the Federal Republic from May 1955, and also gave it membership of NATO. In 1957 the *Bundestag* (Federal Assembly) confirmed West Berlin's status as capital of Federal Germany. The seat of the Federal Government continues to be Bonn. Saarland, under French occupation, was rejoined with the F.R.G. administratively in January 1957 and became economically incorporated in July 1959.

Under the Chancellorship of Dr. Konrad Adenauer (1949-63) and the direction of Economics Minister Dr. Ludwig Erhard, who succeeded Adenauer as Chancellor until 1966, the Federal Republic rebuilt itself rapidly to become one of the most affluent and economically dynamic states of Europe. Much was done to reconcile Federal Germany with the Western allies, and this policy culminated in the Republic's becoming a founder member of the European Economic Community (EEC). No progress was made with eastern Europe due to the Government's insistence on its policy of re-unification, maintaining that

the 1937 borders of the Reich remained legally valid until the signing of a peace treaty by the Government of a united Germany.

The Christian Democratic Union (C.D.U.) with its allied Bavarian party, the Christian Social Union (C.S.U.), which had formed the Government from 1949, ruled in coalition with the Social Democratic Party (S.P.D.) from 1966 to 1969, under the Chancellorship of Dr. Kurt Kiesinger. During these years of the so-called "Grand Coalition" prosperity continued and there was no change in the re-unification policy.

After the general elections of October 1969, a new coalition of the S.P.D. and the Free Democratic Party (F.D.P.) formed the Government, under the Chancellorship of Willy Brandt. The coalition Government adopted a fresh policy towards eastern Europe (*Ostpolitik*), and particularly towards the German Democratic Republic. During 1970 formal talks were conducted between the two countries for the first time and there was a marked increase in diplomatic contacts between the Federal Republic and the other Communist countries of Europe. Treaties were signed with the Soviet Union on the Renunciation of Force, and with Poland, recognizing the Oder/Neisse Line as the border between Germany (actually the G.D.R.) and Poland, and renouncing the former Federal German claims on the eastern territories of the old Reich. In 1971 the Quadripartite Agreement of the four powers on the position of West Berlin provided that there should be unimpeded access from the Federal Republic to West Berlin and that citizens of West Berlin should be allowed to visit the G.D.R. The two German states concluded a Basic Relations Treaty governing their relationship in 1972 and became members of the United Nations in September 1973. In March 1974 a further treaty was signed agreeing to set up Permanent Representative Missions in Bonn and East Berlin. Relations between the two Germanies grew tense in 1976 and in January 1977 East Germans were refused entry into the West German Permanent Mission in East Berlin by East German guards. After a year of deadlock, negotiations between the two Germanies were resumed in October 1977.

The S.P.D./F.D.P. coalition lost its majority in April 1972 but various measures were found to keep the Government going. An election was eventually called in November which, by West German standards, was an overwhelming success for the coalition, the S.P.D. becoming for the first time the largest party in the *Bundestag*. Chancellor Brandt resigned in May 1974, after the discovery that his personal assistant had been working for the G.D.R. Minister of State Security. Brandt was succeeded by Helmut Schmidt, previously Minister of Finance. In the same month Walter Scheel, Brandt's Vice-Chancellor and Foreign Minister, was elected President in place of Gustav Heinemann.

A deteriorating economic situation was accompanied by a decline in the popularity of the Government and increasing tension between the coalition partners. In the general election of October 1976 the S.P.D. lost its position as largest party in the *Bundestag*, but the S.P.D./F.D.P. coalition retained a slender majority sufficient to form a new Government in December 1976. Helmut Schmidt was re-elected Chancellor. Traditional partnerships between parties became less certain. The Bavarian C.S.U., led by Franz Josef Strauss, split from the C.D.U. in November 1976, intending to form a separate parliamentary party in the *Bundestag*. However, the two parties united again before the *Bundestag* assembled. Following local elections in Lower Saxony in December 1976 and in the Saar in February 1977, the F.D.P., the coalition partner in the Federal Government of the S.P.D., in both cases became the coalition partner in the *Land* (state) governments of the federal opposition party, the C.D.U.

Government

The Federal Republic is composed of 10 *Länder* (states)—each *Land* having its own constitution, parliament and government—plus the city of West Berlin which retains a separate status.

The country has a parliamentary regime, with a bicameral legislature. The Upper House is the *Bundesrat* (Federal Council), with 45 seats, including 41 members of *Land* governments (which appoint and recall them) and four non-voting representatives appointed by the West Berlin Senate. The term of office of *Bundesrat* members varies with *Land* election dates. The lower House, and the country's main legislative organ, is the *Bundestag* (Federal Assembly), with 518 deputies, including 496 elected for four years by universal adult suffrage (using a mixed system of proportional representation and direct voting) and 22 members, with limited voting rights, elected by the West Berlin House of Representatives.

Executive authority rests with the *Bundesregierung* (Federal Government), led by the *Bundeskanzler* (Federal Chancellor), who is elected by an absolute majority of the *Bundestag* and appoints the other Ministers. The *Bundespräsident* (Federal President) is a constitutional Head of State elected by a Federal Convention consisting of the *Bundestag* and an equal number of members elected by *Land* parliaments. He normally acts on the Chancellor's advice.

Each *Land* has its own legislative assembly, with the right to pass laws except in such matters as are the exclusive right of the Federation. Both education and police are in the control of the *Länder*.

Local responsibility for the execution of Federal and State Laws is undertaken by the *Städte und Gemeinden* (communes) and *Landkreise* (counties).

Defence

As a member of NATO and the Western European Union, Federal Germany supplies twelve divisions. After the United States, Germany is the second largest financial contributor towards NATO infrastructure.

Conscription has been in force since 1956 and lasts for a period of fifteen months. In 1977 the strength of the army stood at 341,000 and there were 1,056,000 reserves. The

navy was 38,000 strong with 23,500 reserves, and there were 110,000 in the air force with 100,000 reserves. Defence expenditure for 1977 was estimated at 34,638 million DM. The new force structure of the Bundeswehr, the essential parts of which are due to be completed in 1978, will ensure that the Bundeswehr will be able to fulfil its mission in the 1980s with reduced numbers of servicemen on active duty while still maintaining and strengthening the conventional power.

Economic Affairs

After the destruction caused by the Second World War the Federal Republic, containing most of the principal industrial areas of Germany, made a remarkable economic recovery which was sustained over a number of years and has often been described as Germany's *Wirtschaftswunder* ("economic miracle"). The basis of this prosperity has been iron and steel, vehicles, engineering, shipbuilding, electrical goods and chemicals, and since the late 1950s Federal Germany has been the second largest trading nation in the world. It contributes some 11 per cent of the combined exports of the West.

A record trade surplus of over 50,000 million DM was achieved in 1974. This dropped to 37,200 million DM in 1975 and to 34,500 million DM in 1976, but in the first nine months of 1977 the trade surplus of 26,300 million DM was 10 per cent higher than for the same period of 1976. Since 1970 about 45 per cent of Federal Germany's exports have gone annually to EEC countries. Exports to the planned-economy countries of Eastern Europe and China increased from 4.3 per cent of Federal Germany's total exports in 1970 to 6.8 per cent in 1976. Exports to Asia increased from 5 per cent in 1970 to 8.7 per cent in 1976, those to Africa from 2.8 per cent in 1970 to 4.8 per cent in 1976, and those to the OPEC countries from 2.3 per cent in 1970 to 9.1 per cent in 1977. Successful exports to the oil-producing countries offset the increased costs of Federal Germany's fuel imports, and although export growth to those countries decreased from 76 per cent in 1974 to 60 per cent in 1975 and 25 per cent in 1976, it rose again to 31 per cent in the first half of 1977. Trade with the G.D.R. is referred to not as imports and exports, but as "inter-German trade".

Federal Germany's balance of payments is also favourable, although the trade surplus is partly offset by a persistent deficit on services and transfers. From the record 25,000 million DM in 1974 the current account surplus decreased to 8,500 million DM in 1976. Due to the balance of payments surplus and a rate of inflation of under 4 per cent, Federal Germany has been in a better position than other Western European countries to face the oil crisis. The G.N.P. in 1976 grew by 5.6 per cent and was originally forecast to grow by 5 per cent in 1977. However, by October 1977 a G.N.P. growth rate of little more than 3 per cent was expected for the year. In September the Government introduced tax reductions and a programme of increased public investment to aid the economy out of recession.

Unemployment is a major problem. Despite a drop in the birth-rate, in immigration, and in the number of *Gastarbeiter* (foreign workers), the number of unemployed was over one million in 1975, 1976 and 1977.

FEDERAL REPUBLIC OF GERMANY

Transport and Communications

The Federal Republic has a highly developed system of transport by rail, inland waterways, roads and air. In 1976 there were 469,568 kilometres of classified roads, including 6,435 kilometres of motorway (*Autobahn*). In 1976 the Federal railways totalled 28,576 kilometres, of which 10,349 kilometres were electrified. The canals linking the rivers Rhine, Main and Danube are being widened and deepened to form a trading route linking the North Sea with the Black Sea. There are international airports at Berlin (West), Bremen, Cologne-Bonn, Düsseldorf, Frankfurt/Main, Hamburg, Hanover, Munich and Stuttgart.

Social Welfare

Social legislation provides insurance for health, accident, old-age, disability and unemployment. The schemes for disability, old-age and unemployment insurance are compulsory for all employees, and over 80 per cent of the population is covered by national health insurance. More than 20 per cent of the expenditure of the Federal Budget goes to social security payments.

Education

The Basic Law gives the control of education entirely to the State governments. They do, however, co-operate quite closely to ensure a large degree of conformity in the system.

Education is compulsory from the end of the sixth to the eighteenth year, and nine years must be full-time. Primary education is free, and grants are made for secondary education wherever fees are payable. Attendance at the basic school (*Grundschule*) is obligatory for all children during the first four years of their school life, after which they may continue in the elementary school, as do 80 per cent of the pupils, or proceed to the intermediate school (*Realschule*) for six years or the high school (*Gymnasium*) for nine years. There are three types of High School, specializing in Classics, Modern Languages, and Mathematics and Science. A *Gymnasium* school-leaving certificate is a necessary prerequisite for University education. Those who stay in the elementary school complete their education by part-time attendance at a vocational school.

There are in the Federal Republic forty-eight universities and nine technical universities, as well as a number of colleges specializing in individual subjects.

Tourism

Germany's tourist attractions include spas, summer and winter resorts, mountains, the Rhineland, medieval towns and villages. There are more than one and a half million beds available for tourists. Overnight stays by foreign

tourists totalled 17,572,420 in 1976. The number of foreign tourists visiting Federal Germany was 7,889,614 and receipts from tourism totalled 8,083 million DM.

Visas are not required for nationals of the following countries: Afghanistan, Andorra, Argentina, Australia, Austria, Bangladesh, Barbados, Belgium, Benin, Bolivia, Brazil, Burma, Cameroon, Canada, the Central African Empire, Chad, Chile, Colombia, the Congo, Costa Rica, Cyprus, Denmark, the Dominican Republic, Ecuador, El Salvador, Ethiopia, Finland, France, Gabon, the Gambia, Greece, Guadeloupe, Guam, Guatemala, Honduras, Iceland, India, Indonesia, Iran, Ireland, Israel, Italy, the Ivory Coast, Jamaica, Japan, Kenya, the Republic of Korea, Liechtenstein, Luxembourg, Macao, Malawi, Malaysia, Malta, Martinique, Mauritius, Mexico, Monaco, Nepal, the Netherlands, New Zealand, Niger, Norway, Panama, Paraguay, Peru, the Philippines, Portugal, Puerto Rico, Rwanda, San Marino, Senegal, Singapore, South Africa, Spain, Sri Lanka, Sweden, Switzerland, Thailand, Togo, Trinidad and Tobago, Turkey, Uganda, the United Kingdom, the U.S.A., the Upper Volta, Uruguay, the Vatican City, Venezuela and Yugoslavia.

Sport

Sport in the Federal Republic is highly organized, football and athletics clubs being extremely numerous. Other popular sports are shooting, handball, swimming, table tennis, and tennis. There are also over 140 golf courses.

Public Holidays

1978: March 24th (Good Friday), March 27th (Easter Monday), May 1st (Labour Day), May 4th (Ascension Day), May 15th (Whit Monday), May 25th (Corpus Christi)*, June 17th (Day of German Unity), August 15th (Assumption)*, November 1st (All Saints' Day)*, November 22nd (Repentance Day), December 25th and 26th (Christmas).

THE CONSTITUTION

THE Basic Law of 1949 was and is intended as a provisional Constitution to serve until a permanent one for Germany as a whole can be drawn up. The Parliamentary Council which framed it set out to continue the tradition of the Constitution of 1848-49, and to preserve some continuity with subsequent German constitutions (with Bismarck's Constitution of 1871, and with the Weimar Constitution of 1919) while avoiding the mistakes of the past. It contains 146 articles, divided into 11 sections, and introduced by a short preamble.

I. Basic Rights

The opening articles of the Constitution guarantee the dignity of man, the free development of his personality, the equality of all men before the law, and freedom of faith and conscience. Men and women shall have equal rights, and no one may be prejudiced because of sex, descent, race, language, homeland and origin, faith, or religions or political opinion.

No one may be compelled against his conscience to perform war service as a combatant (*Art. 4*). All Germans have the right to assemble peacefully and unarmed and to form associations and societies. Everyone has the right freely to express and to disseminate his opinion through speech, writing or pictures. Freedom of the press and freedom of reporting by radio and motion pictures are guaranteed (*Art. 5*). Censorship is not permitted.

The State shall protect marriage and the family property and the right of inheritance. The care and upbringing of children is the natural right of parents. Illegitimate children shall be given the same conditions for their development and their position in society as legitimate children. Schools are under the supervision of the State. Religion forms part of the curriculum in the State schools, but parents have the right to decide whether the child shall receive religious instruction (*Art. 7*).

A man's dwelling is inviolable; house searches may be made only by Court Order. No German may be deprived of his citizenship if he would thereby become stateless. The politically persecuted enjoy the right of asylum (*Art. 16*).

II. The Federation and the Länder

Article 20 describes the Federal Republic (*Bundesrepublik Deutschland*) as a democratic and social federal

state. The colours of the Federal Republic are to be black-red-gold, the same as those of the Weimar Republic. Each *Land* within the Federal Republic has its own Constitution, which must, however, conform to the principles laid down in the basic law. All *Länder*, districts and parishes must have a representative assembly resulting from universal, direct, free, equal and secret elections (*Art. 28*). The exercise of the power of state is the concern of the *Länder*, in so far as the Basic Law does not otherwise prescribe. Where there is incompatibility, Federal Law supersedes *Land* Law (*Art. 31*). Every German has in each *Land* the same civil rights and duties.

Political parties may be freely formed in all the states of the Federal Republic, but their internal organization must conform to democratic principles, and they must publicly account for the sources of their funds. Parties which seek to impair or abolish the free and democratic basic order or to jeopardize the existence of the Federal Republic of Germany are unconstitutional (*Art. 21*). So are activities tending to disturb the peaceful relations between nations, and, especially, preparations for aggressive war, but the Federation may join a system of mutual collective security in order to preserve peace. The rules of International Law shall form part of Federal Law and take precedence over it and create rights and duties directly for the inhabitants of the Federal territory (*Art. 25*).

The territorial composition of the *Länder* shall be re-organized with due regard to regional unity, territorial and cultural connections, economic expediency and social structure.

III. The Bundestag

The deputies of the Lower House or *Bundestag* shall be elected by the people in universal, free, equal, direct and secret elections, for a term of four years.* Any person who has reached the age of 18 is eligible to vote and any person who has reached the age of 18 is eligible for election (*Art. 38*). A deputy may be arrested for a punishable offence

* The elections of 1949 were carried out on the basis of direct election. But in January 1953, the draft of a new electoral law was completed by the Federal Government and passed shortly before the dissolution. The new law represents a compromise between direct election and proportional representation, and is designed to discourage the rise of many small parties.

only with the permission of the *Bundestag*, unless he be apprehended in the act or during the following day.

The *Bundestag* elects its President and draws up its Standing Orders. Most decisions of the House require a majority vote. Its meetings are public, but the public may be excluded by the decision of a two-thirds majority. Upon the motion of one-quarter of its members the *Bundestag* is obliged to set up an investigation committee.

IV. The Bundesrat

The Federal Council or *Bundesrat* is the Upper House through which the *Länder* participate in the legislation and the administration of the Federation. The *Bundesrat* consists of members of the *Land* governments, which can appoint and recall them (*Art. 51*). Each *Land* has at least three votes; *Länder* with more than two million inhabitants have four, and those with more than six million inhabitants have five. The votes of each *Land* may only be given as a block vote. The *Bundesrat* elects its President for one year. Its decisions are taken by simple majority vote. Meetings are in public, but the public may be excluded. The members of the Federal Government have the right, and, on demand, the obligation, to participate in the debates of the *Bundesrat*.

V. The Federal President

The Federal President or *Bundespräsident* is elected by the Federal Convention (*Bundesversammlung*), consisting of the members of the *Bundestag* and an equal number of members elected by the *Länder* Parliaments (*Art. 54*). Every German eligible to vote in elections for the *Bundestag* and over 40 years of age is eligible for election. The candidate who obtains an absolute majority of votes is elected, but if such majority is not achieved by any candidate in two ballots, whoever receives most votes in a further ballot becomes President. The President's term of office is five years. Immediate re-election is admissible only once. The Federal President must not be a member of the Government or of any legislative body or hold any salaried office. Orders and instructions of the President require the counter-signature of the Federal Chancellor or competent Minister, except for the appointment or dismissal of the Chancellor or the dissolution of the *Bundestag*.

The President represents the Federation in International Law and accredits and receives envoys. The *Bundestag* or the *Bundesrat* may impeach the President before the Federal Constitutional Court on account of wilful violation of the Basic Law or of any other Federal Law (*Art. 61*).

VI. The Federal Government

The Federal Government (*Bundesregierung*) consists of the Federal Chancellor (*Bundeschkanzler*) and the Federal Ministers (*Bundesminister*). The Chancellor is elected by an absolute majority of the *Bundestag* on the proposal of the Federal President (*Art. 63*). Ministers are appointed and dismissed by the President upon the proposal of the Chancellor. Neither he nor his Ministers may hold any other salaried office. The Chancellor determines general policy and assumes responsibility for it, but within these limits each Minister directs his department individually and on his own responsibility. The *Bundestag* may express its lack of confidence in the Chancellor only by electing a successor with the majority of its members; the President must then appoint the person elected (*Art. 67*). If a motion of the Chancellor for a vote of confidence does not obtain the support of the majority of the *Bundestag*, the President may, upon the proposal of the Chancellor, dissolve the House within twenty-one days, unless it elects another Chancellor within this time (*Art. 68*).

VII. The Legislation of the Federation

The right of legislation lies with the *Länder* in so far as the Basic Law does not specifically accord legislative powers to the Federation. Distinction is made between fields of exclusive legislation of the Federation and fields of concurrent legislation of *Bund* and *Länder*. In the field of concurrent legislation the *Länder* may legislate so long and so far as the Federation makes no use of its legislative right. The Federation has this right only in so far as a matter cannot be effectively regulated by *Land* legislation, or the regulation by *Land* Law would prejudice other *Länder*, or if the preservation of legal or economic unity demands regulation by Federal Law. Exclusive legislation of the Federation is strictly limited to such matters as foreign affairs, citizenship, migration, currency, copyrights, customs, railways, post and telecommunications. In most other fields, as enumerated (*Art. 74*), concurrent legislation exists.

The legislative organ of the Federation is the *Bundestag*, into which Bills are introduced by the Government, by members of the *Bundestag* or by the *Bundesrat* (*Art. 76*). After their adoption they must be submitted to the *Bundesrat*, which may demand, within three weeks, that a committee of members of both houses be convened to consider the Bill (*Art. 77*). In so far as its express approval is not needed, the *Bundesrat* may veto a law within two weeks.

An alteration of the Basic Law requires a majority of two-thirds in both houses, but an amendment by which the division of the Federation into *Länder* and the basic principles contained in *Articles 1* and *20* would be affected, is inadmissible (*Art. 79*).

The Federal Government or the *Länder* Governments may be authorized by law to issue ordinances. A state of legislative emergency for a Bill can be declared by the President on the request of the Government with the approval of the *Bundesrat*. If then the *Bundestag* again rejects the Bill, it may be deemed adopted nevertheless in so far as the *Bundesrat* approves it. An emergency must not last longer than six months and may not be declared more than once during the term of office of any one Government (*Art. 81*).

VIII. The Execution of Federal Laws and the Federal Administration

The *Länder* execute the Federal Laws as their own concern in so far as the Basic Law does not otherwise determine. In doing so, they regulate the establishment of the authorities and the administrative procedure, but the Federal Government exercises supervision in order to ensure that the *Länder* execute the Federal Laws in an appropriate manner. For this purpose the Federal Government may send commissioners to the *Land* authorities (*Art. 84*). Direct Federal administration is foreseen for the Foreign Service, Federal finance, Federal railways, postal services, Federal waterways and shipping.

In order to avert imminent danger to the existence of the democratic order, a *Land* may call in the police forces of other *Länder*; and if the *Land* in which the danger is imminent is itself not willing or able to fight the danger, the Federal Government may place the police in the *Land*, or the police forces in other *Länder*, under its instructions (*Art. 91*).

IX. The Administration of Justice

Judicial authority is invested in independent judges, who are subject only to the law and who may not be dismissed or transferred against their will (*Art. 97*).

Justice is exercised by the Federal Constitutional Court, by the Supreme Federal Court, by the Federal Courts

and by the Courts of the *Länder*. The Federal Constitutional Court decides on the interpretation of the Basic Law in cases of doubt, on the compatibility of Federal Law or *Land* Law with the Basic Law, and on disputes between the Federation and the *Länder* or between different *Länder*. The Supreme Federal Court decides in cases where the decision is of importance for the uniformity of the administration of justice of the Higher Federal Courts. Higher Federal Courts are to be established for the spheres of ordinary, administrative, finance, labour and social jurisdiction. Extraordinary courts are inadmissible.

The freedom of the individual may be restricted only on the basis of a law. No one may be prevented from appearing before his lawful judge (*Art. 101*). Detained persons may be subjected neither to physical nor to mental ill-treatment. The police may hold no one in custody longer than the end of the day following the arrest without the decision of a court. Any person temporarily detained must be brought before a judge who shall inform him of the reasons of his arrest, at the latest on the following day. A person enjoying the confidence of the detainee must be notified forthwith of any continued duration of a deprivation of liberty. An act may be punished only if it was punishable by law before the act was committed, and no one may be punished more than once on account of the same criminal act. The death sentence shall be abolished.

X. Finance

The Federation has the right of exclusive legislation only on customs and financial monopolies; on most other taxes, especially on income, property and inheritance, it has concurrent legislation rights with the *Länder* (see VII above).

Customs, financial monopolies, excise taxes (with exception of the beer tax), the transportation tax, the turnover tax and property dues serving non-recurrent purposes, are administered by Federal finance authorities, and the revenues thereof accrue to the Federation. The remaining taxes are administered, as a rule, by the *Länder* and the *Gemeinden* to which they accrue. The Federation and the *Länder* shall be self-supporting and independent of each other in their budget economy (*Art. 109*). In order to ensure the working efficiency of the *Länder* with low revenues and to equalize the differing burden of expenditure of the *Länder*, the Federation may, however, make grants, and take the necessary funds from specific taxes accruing to the *Länder*. All revenues and expenditures of the Federation must be estimated for each fiscal year and included in the budget, which must be established by law before the beginning of the fiscal year. Decisions of the *Bundestag* or the *Bundesrat* which increase the budget expenditure proposed by the Federal Government require its approval (*Art. 113*).

XI. Transitional and Concluding Provisions

The *Articles 116-146* regulate a number of disconnected matters of detail, such as the relation between the old Reich and the Federation, the Federal Government and Allied High Commission, the expenses for occupation costs which have to be borne by the Federation, and the status of former German nationals who now may regain their citizenship. *Article 143* contains the threat of severe punishment to those who attempt to change by force the constitutional order of the Federation or of a *Land*, or to prevent the Federal President by force or the threat of danger from exercising his powers.

MAJOR CONSTITUTIONAL AMENDMENTS

I. SOVEREIGNTY AND RESPONSIBILITY

An amending bill of 1954:

- (1) Laid down under an amendment to *Article 73* of the Basic Law that the Federal Parliament had full powers to legislate in all matters relating to national defence "including obligatory national service for men over 18 years of age".
- (2) Introduced a new article (142A) which declared that "the treaties signed in Bonn and Paris on May 26th and 27th, 1952 (i.e. the Bonn Conventions and European Defence Community Treaty) were not contrary to the Federal Constitution".

Until September 1954 the operation of the Basic Law was conditioned by two further instruments: the first, the Occupation Statute of 1949 (with subsequent amendments) defining the rights and obligations of the United States, Great Britain and France with respect to Germany; and the second, the Bonn Conventions, designed to replace the Occupation Statute and to grant almost full sovereignty to the German people.

The Bonn Conventions, 1952

- (1) The Occupation Statute was abolished, and the Federal Government inherited full freedom in so far as the international situation permits.
- (2) Allied forces in Germany were no longer occupation forces; but part of "the defence of the free world, of which the Federal Republic and West Berlin form a part".
- (3) A number of problems which would normally be settled by a Peace Treaty were resolved; the Conventions

were in effect a provisional treaty to end the war between the Federal Republic and the Three Powers, pending a final treaty between the whole of Germany and the Four. Under this heading the following provisions were made:

- (a) The Federal Republic would have full control over its internal and foreign affairs and relations with the Three Powers would be conducted through ambassadors.
- (b) Only because of the international situation would the Three Powers claim their rights regarding the stationing of armed forces on German soil, matters concerning Berlin, the re-unification of Germany and the final Peace Treaty.
- (c) The Federal Republic undertook to conduct its policy according to the principles of the United Nations.
- (d) In their negotiations with states with which the Federal Republic has no relations, the Three Powers would consult with the Federal Government.
- (e) The Federal Republic would participate in the European Defence Community.
- (f) The Three Powers and the Federal Republic agreed that a freely negotiated peace settlement for the whole of Germany was their common aim, and that determination of the final boundaries of Germany must await such a treaty.

The Conventions also included supplementary contractual agreements concerning the rights and obligations of foreign troops in Germany, taxation of the armed forces, a Finance Convention, and a Convention on the settlement of matters arising out of the war and the occupation.

FEDERAL REPUBLIC OF GERMANY

The Constitution, The Government

The London and Paris Agreements

The terms of the London Agreement of 1954 were that Germany and Italy should enter an expanded Brussels Treaty Organization; that German sovereignty should be restored and that Germany should, on agreed terms, enter NATO, and that an Agency for the control of armaments on the continent of Europe should be set up. The Paris Agreement later that year established the details of the points agreed in London.

German Sovereignty

On May 5th, 1955, with the depositing of the instruments of ratification of the London and Paris Agreements, the Federal Republic of Germany attained its sovereignty. The three-power status continues for the time being in West Berlin, but is modified by a declaration by the American, French and British Commandants.

II. OTHER AMENDMENTS

In June 1968 legislation was finally passed providing for emergency measures to be taken during a time of crisis.

The main provisions of this, the 17th Amendment to the Constitution, were to allow the authorities to place certain restrictions on the secrecy of correspondence and telecommunications, to conscript men into the armed forces and to use the armed forces to fight armed insurgents if the free democratic status of the Federal Republic or of any Land was threatened. A new Article 53a provided for the establishment of a committee of 33 members, two-thirds members of the Bundestag and one-third members of the Bundesrat, which must be informed by the Federal Government of any plans in the event of a defence emergency. The life of parliamentary bodies and the terms of office of the Federal President and his deputy might be extended during a defence emergency.

WEST BERLIN

On August 4th, 1950, the Berlin City Assembly passed a Constitution defining its special position under technical three-power control. Under German Constitutional Law Berlin is a *Land* of the Federal Republic but this law is at present suspended by three-power reservations. Nevertheless West Berlin sends representatives to the *Bundestag* and *Bundesrat* in Bonn but these representatives have no vote in the plenary sessions of either House. To be valid in West Berlin, Federal Law has to be specially adopted there. The Constitution came into force on October 1st, 1950.

The House of Representatives (*Abgeordnetenhaus*) is the legislative body, and has 138 members. The executive agency is the Senate, which is composed of the Governing Mayor (*Regierender Bürgermeister*), his deputy, and at the most sixteen Senators. The Governing Mayor is elected by a majority of the House of Representatives. The Senate, which is responsible to the House of Representatives and dependent on its confidence, is formed by a coalition of the S.P.D. and F.D.P.

RELIGION

THE PROTESTANT CHURCH

Until 1969 the Protestant churches in both the Federal and Democratic Republics were united in the *Evangelische Kirche in Deutschland* (E.K.D.), a federation established at the Conference of Eisenach (Thuringia) in 1948. In 1969, however, the churches in the Democratic Republic declared themselves organizationally independent and established the *Bund der Evangelischen Kirchen in der D.D.R.* Consequently the E.K.D. is now restricted to the Federal Republic and Berlin (West) only, but maintains links with the churches in the Democratic Republic.

The *Vereinigte Evangelisch-Lutherische Kirche Deutschlands* (V.E.L.K.D.), one of the federations within the E.K.D., also divided in 1968 and is paralleled in the Democratic Republic by the V.E.L.K.D.D.R. The *Evangelische Kirche der Union* (E.K.U.) is partly divided and spans both the Federal and the Democratic Republics.

About 44 per cent of the population of the Federal Republic (27.2 million) are members of the Protestant Church, the great majority belonging to churches forming the E.K.D. The total membership of the Lutheran churches is almost 13 million, of the United Churches about 13.7 million, and of the Reformed Churches about 448,000.

Outside the E.K.D. are numerous small Evangelical Free Churches, such as the Baptists, Methodists, Mennonites and the Lutheran Free Church, with a membership of approximately 400,000 in all.

EVANGELISCHE KIRCHE IN DEUTSCHLAND

(*The Evangelical Church in Germany*)

The governing bodies of the E.K.D. are its Synod of Clergy and lay members which meets at regular intervals, the Conference of member churches, and the Council, composed of 15 elected members. The E.K.D. has an ecclesiastical secretariat of its own (the Evangelical Church Chancellery), and a special office for foreign relations.

THE PRESS

Article 5 of the 1949 Basic Law of the Republic stipulates: "Everyone has the right freely to express or to disseminate his opinion by speech, writing and pictures and freely to inform himself from generally accessible sources. Freedom of the press and freedom of reporting by radio and motion pictures are guaranteed. There shall be no censorship. These rights are limited by the provisions of the general laws, the provisions of the law for the protection of youth, and by the right to inviolability of personal honour." These last qualifications refer to the Federal law penalizing the sale to young people of literature judged to endanger morality, and to articles in the Penal Code relating to defamation, in particular Article 187A concerning defamation of public figures.

There is no Federal Press Law, all legal action being normally referred back to the Constitution. But the press is subject to general items of legislation some of which may significantly limit press freedom. Article 353C of the Penal Code for example, dating from the Nazi period, prohibits the publication of official news supposed to be secret; under it a journalist may be required to reveal his sources. The Code of Criminal Procedure also constitutes a danger in that it authorizes the government to confiscate objects potentially important as evidence in a legal investigation, which may be construed to include papers, print, etc.

Freedom of the press is stipulated in each of the Constitutions of the individual Länder. Many Länder have recently enacted laws defining the press's democratic role and some give the press access to sources of government information; some authorize the journalist to refuse to disclose his sources; others qualify, and even withhold this right. Some permit printed matter to be confiscated on suspicion of an indictable offence only if authorized by an independent judge; others allow a district attorney or even the police to give this authorization.

The German Press Council is composed of publishers and journalists. It investigates complaints against the press and enjoys a considerable standing.

The Federal German press is quite free of government control. No daily is directly owned by a political party, and though some 10 per cent of papers support a party line, at least two-thirds of newspapers, including all the major dailies, are politically independent.

The political and economic conditions since 1949 have fostered the rapid development of a few large publishing groups.

The press situation has been under consideration by three government commissions, which have suggested various measures to halt the trend towards concentration.

The main press commission, the Günther commission, issued an interim report on May 22nd, 1968. The commission laid down various limits on the proportions of circulation one group should be allowed to control: (1) 40 per cent of the total circulation of newspapers or 40 per cent of the total circulation of magazines; (2) 20 per cent of the total circulation of newspapers and magazines together; (3) 15 per cent of the circulation in one field if the proportion owned in the other field is 40 per cent. At that time Springer's estimated ownership was 39.2 per cent of newspaper circulation (65-70 per cent in Berlin) and 17.5 per cent of magazine circulation. In June Springer reduced his share of the periodical market to around 11 per cent.

The newspaper with the largest circulation is *Bild Zeitung* (circ. 4,700,000) which is printed in eight different provincial centres, a great advantage in a country where the regional press has always been strong.

Axel Springer Group (Prop. AXEL SPRINGER): Kochstrasse 50, 1 Berlin 61; the largest newspaper publishing group in continental Europe; includes five major dailies (*Die Welt, Hamburger Abendblatt, Bild Zeitung, Berliner Morgenpost, B.Z.*), two Sunday papers (*Welt am Sonntag, Bild am Sonntag*), two radio, television and family magazines (*HÖRZU, Funk Uhr*) and the book publishing firm Verlag Ullstein.

The other principal groups are as follows:

Gruner und Jahr A.G. & Co. Druck- und Verlagshaus: 2210 Itzehoe, Klaus-Groth-Str. 11, Postfach 129, and 2 Hamburg 36, Postfach 302040; owns *Stern*, *Brigitte*, *Essen und Trinken*, *Geo*, *Capital*, *Eltern*, *Sesamstrasse*, *Yps*, *Schöner Wohnen*.

Süddeutscher-Verlag (Pres. HANS DÜRRMEIER): owns *Süddeutsche Zeitung* and *München Abendzeitung*.

Jahreszeiten-Verlag (Pres. HELMUT GANSKE): owns amongst others the periodicals *Für Sie* and *Moderne Frau*.

Heinrich-Bauer-Verlag (Pres. HEINRICH BAUER): owns the popular illustrated magazines *Quick* (Munich), *Neue Revue* (Hamburg), *Praline*, *Neue Post*: and *Das Neue Blatt* and *Bravo*, formerly owned by the Springer Group.

Burda Druck und Verlag (Pres. Dr. FRANZ BURDA): 7600 Offenbach/Baden; owns *Bunte Illustrierte*, *Bild und Funk*, *Freundin* and *Das Haus*.

The most important and influential daily newspapers include *Frankfurter Allgemeine Zeitung*, *Süddeutsche Zeitung* (Munich) and *Die Welt* (Hamburg). The most popular dailies apart from *Bild Zeitung* are *Westdeutsche Allgemeine*, *Hamburger Morgenpost*, *Hamburger Abendblatt* and *B.Z.*

The most influential weeklies include *Die Zeit* (Hamburg), the Sunday *Welt am Sonntag* and *Bild am Sonntag*, and the political periodical *Der Spiegel*. Numerous popular illustrated weekly periodicals have developed, led by *HÖRZU*, *Stern* and *Quick*.

In 1974 374 dailies and 63 Sunday and weekly papers were published in Germany, giving an average daily circulation of 19 million—the highest on the Continent. In 1975, 364 daily newspapers had a total circulation of 19 million. In 1973 878 periodicals, with a total circulation of nearly 90 million were published. Of these 227 were of the popular variety.

FINANCE

(cap.=capital; p.u.=paid up; dep.=deposits; m.=million)

The *Deutsche Bundesbank*, the central bank of the Federal Republic of Germany, consists of the central administration in Frankfurt (considered to be the financial capital of the country), eleven main offices (*Landeszentralbanken*) in the *Länder* and Berlin, and over 200 branches. In carrying out its functions as determined by law, the *Bundesbank* is independent of the instructions of the Federal Government, but it is bound to support the Government's general economic policy. All other credit institutions are subject to governmental supervision through the Federal Banking Supervisory Office (*Bundesaufsichtsamt für das Kreditwesen*) in Berlin.

Banks outside the central banking system are divided into three groups: private commercial banks, credit institutions incorporated under public law and co-operative credit institutions. All these commercial banks are "universal banks", conducting all kinds of customary banking business. There is no division of activities. As well as the commercial banks there are a number of specialist banks, such as private or public mortgage banks.

The group of private commercial banks includes: those known as the "Big Three" (the *Deutsche Bank*, the *Dresdner Bank* and the *Commerzbank*); all banks incorporated as a company limited by shares (*Aktiengesellschaft—A.G.*, *Kommanditgesellschaft—K.G.a.A.*) or as a private limited company (*Gesellschaft mit beschränkter Haftung—G.m.b.H.*) and which are known as "regional banks" because they do not usually function throughout the Federal Republic; and the private banks, which are run as sole proprietorships or partnerships and mostly have no

branches outside their home town. Foreign banks are classed as regional banks. The main business of all private commercial banks is short-term lending. The private bankers fulfil the most varied tasks within the banking system.

The banks incorporated under public law are the savings banks and their central giro institutions. These have extended their regular banking activities since the 1920s and are now identical with the commercial banks. At the end of 1976 there were 650 savings banks with over 16,000 branches.

The head institution of the co-operative system is the *Deutsche Genossenschaftskasse*. In 1974 there were some 5,500 industrial and agricultural credit co-operatives with over 19,000 offices.

Central banking organizations were set up in 1948. The central organization for the private commercial banks is the German Bankers' Association (*Bundesverband deutscher Banken*), which consists of eleven provincial associations, the Association of Private Mortgage Banks (*Verband privater Hypothekenbanken*) and the Association of Private Shipping Banks (*Verband privater Schiffsbanken*). Other federal banking associations are the German Savings Banks Association (*Deutscher Sparkassen- und Giroverband*), the Association of German Industrial and Agricultural Credit Co-operatives (*Bundesverband der Deutschen Volksbanken und Raiffeisenbanken*) and the Association of Public-Law Credit Institutions (*Verband öffentlicher Banken*).

ATOMIC ENERGY

Bundesministerium für Forschung und Technologie (*Federal Ministry for Research and Technology*): Bonn-Bad Godesberg, Stresemannstrasse 2, Postfach 120370; f. 1955; Minister HANS MATTHÖFER.

The Ministry is divided into five departments, the first dealing with administration, planning, finance, co-ordination of research institutions, the second with principal political problems of research, general promotion of research and international co-operation, the third with energy, raw materials and maintenance of supplies, biology, ecology and medicine, the fourth with data-processing and information systems, and the fifth with space travel and transport systems.

The Ministry's responsibility in the nuclear energy field is to promote nuclear research and nuclear engineering as well as to plan and co-ordinate the activities of all of these bodies within the framework of the German Nuclear Programme. In 1974 some DM 1,000 million was placed at the Ministry's disposal for the fulfilment of its tasks in the nuclear energy field.

Nuclear research is carried out by the research centres of the following institutions in co-operation with universities and industry:

1. Gesellschaft für Kernenergieverwertung in Schiffbau und Schifffahrt m.b.H. Geesthacht.
2. Gesellschaft für Kernforschung m.b.H., Karlsruhe.
3. Gesellschaft für Strahlen- und Umweltforschung m.b.H., Munich.
4. Hahn-Meitner-Institut für Kernforschung Berlin G.m.b.H.
5. Max-Planck-Institut für Plasmaphysik, Garching/München.
6. Kernforschungsanlage Jülich G.m.b.H., Jülich.

There are 12 nuclear power stations in operation, 12 are under construction and 6 have been commissioned.

Nuclear power stations in operation are: the AVR Project at Jülich (North Rhine-Westphalia) with a capacity of 15 MW, the VAK Project at Kahl/Main

(Bavaria) with a capacity of 16 MW, the MZFR Project at Karlsruhe (Baden-Württemberg) with a capacity of 58 MW, the KRB 1 Project at Gundremmingen/Donau (Bavaria) with a capacity of 250 MW, the KWL Project at Lingen/Ems (Lower Saxony) with a capacity of 252 MW, the KWO 1 Project at Obrigheim/Neckar (Baden-Württemberg) with a capacity of 345 MW, the KWW Project at Würgassen/Weser (North Rhine-Westphalia) with a capacity of 670 MW, the KKS Project at Stade/Elbe (Lower Saxony) with a capacity of 662 MW, the Biblis A and Biblis B Projects at Biblis/Rhein (Hesse) with respective capacities of 1,204 MW and 1,300 MW, the KKB Project at Brunsbüttel/Elbe (Schleswig-Holstein) with a capacity of 806 MW and the GKN 1 Project at Neckarwestheim/Neckar (Baden-Württemberg) with a capacity of 813 MW.

The following nuclear projects were planned to begin operating in 1977: the KKP 1 at Philippsburg/Rhein (Baden-Württemberg) with a capacity of 900 MW, the KKKU at Esenshamm/Weser (Lower Saxony) with a capacity of 1,300 MW and the KKI at Oluf/Isar (Bavaria) with a capacity of 907 MW.

Nuclear projects planned to begin operations in 1978 are: the THTR 300 at Hamm-Uentrop Lippe (North Rhine-Westphalia) with a capacity of 308 MW and the KKK at Krümmel/Elbe (Schleswig-Holstein) with a capacity of 1,316 MW. The Mülheim-Kärlich/Rhein Project (Rhine-land Palatinate) with a capacity of 1,295 MW and the KKG Project at Grafenrheinfeld/Main (Bavaria) with a capacity of 1,300 MW are planned to begin operations in 1979. The KWS Project at Wyhl/Rhine (Baden-Württemberg) with a capacity of 1,362 MW, the KWG Project at Grohnde/Weser (Lower Saxony) with a capacity of 1,361 MW, the KRB-11 Project at Gundremmingen/Donau (Bavaria) with a capacity of 1,310 MW and the SNR 300 Project at Kalkar/Rhein (North Rhine-Westphalia) with a capacity of 327 MW are due to begin operation in 1981; and the KBR Project at Brokdorf/Elbe (Schleswig-Holstein) with a capacity of 1,365 MW is planned to start operation in 1982.

GIBRALTAR

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag

Gibraltar is a narrow peninsula running southwards from the south-west coast of Spain to which it is connected by an isthmus. Five miles across the Bay to the west lies the Spanish port of Algeciras and 20 miles across the Straits, to the south, is Africa. The Mediterranean lies to the east. The climate is temperate, snow or frost being extremely rare. The mean minimum and maximum temperatures during the winter are 12°C (54°F) and 18°C (65°F) respectively, and during the summer they are 12°C (54°F) and 29°C (85°F) respectively; the average annual rainfall is 35 inches. The official language is English though the population is bilingual in English and Spanish. Seventy-eight per cent of the population are Roman Catholic, 8 per cent are Muslim and 8 per cent Church of England. The flag (proportions two by one) bears the banner of the Gibraltar coat of arms (castle and key) on a background the upper two-thirds of which are white and the lower third red.

Recent History

The post-war years have been marked by considerable progress socially and economically through intensive development of the medical, educational, housing and social security services, and by the expansion of business and the encouragement of tourism. There has also been considerable constitutional development resulting in partial self-government since 1964 and control over most internal matters since 1969.

The Spanish Government lays claim to Gibraltar as a part of its territory, whilst the United Kingdom maintains that the Treaty of Utrecht (1713) granted sovereignty over Gibraltar to the United Kingdom in perpetuity. Since 1963 Spain has intensified its campaign through the United Nations, for the cession of Gibraltar to Spain and, when the United Kingdom failed to comply with the UN deadline for decolonization, imposed certain restrictions on Gibraltar. These include closing the land frontier, imposing an air space ban affecting aircraft landing at Gibraltar, removing the Algeciras Ferry (the only remaining means of direct access to Spain), withdrawing the Spanish labour force and cutting off telephone and telegraphic communications with Spain.

In pursuance of a UN resolution stating that the interests of the people of Gibraltar should be taken into account the United Kingdom held a referendum in September 1967 in which the overwhelming majority voted for retaining their link with the United Kingdom rather than passing under Spanish sovereignty. This was followed by the drafting of a new Constitution, promulgated in 1969, and in the Preamble to the Constitution Order (1969) the British Government has given an undertaking never to enter into arrangements whereby the people of Gibraltar would pass under the sovereignty of another state against their freely and democratically expressed wishes.

Spain has reiterated claims to sovereignty over the colony in the UN, but the United Kingdom stands by the assurances given in 1969. However, in an attempt to prevent attitudes hardening further, the British Govern-

ment rejected an all-party programme of constitutional reform, presented by Gibraltar in June 1976, which would have strengthened ties with the United Kingdom. In Gibraltar's general election of September 1976, no advocate of immediate rapprochement with Spain was elected. Spain's increasingly flexible attitude towards lifting the blockade on Gibraltar became apparent during talks held between Spanish and British ministers in 1977.

Gibraltar joined the EEC with the United Kingdom in January 1973, under the provisions of the Treaty of Rome relating to European territories for whose external relations a member state is responsible, but at its own request is excluded from the Common External Tariff and Common Agricultural Policy.

Government

Gibraltar is a British Crown Colony, the Queen being represented by a Governor. Executive authority is vested in the Governor, who is advised by the Gibraltar Council composed of five elected and four *ex-officio* members. The Council of Ministers is presided over by the Chief Minister. Since 1969 the Council of Ministers has been responsible for domestic affairs.

The Gibraltar House of Assembly consists of a Speaker appointed by the Governor, fifteen elected members, and two *ex-officio* members.

Elections take place every four years.

Defence

There is a local defence force, the Gibraltar Regiment—which, following the abolition of conscription, was reorganized as a Volunteer Reserve Unit. United Kingdom naval, army and air force units are stationed at Gibraltar, which is also a NATO sub-command.

Economic Affairs

The main sources of income in the Gibraltar economy are tourist spending, payments for services to shipping, British defence expenditure, especially for the Naval Base and Dockyard, and development aid from the British Government.

The closure of the Spanish frontier and the withdrawal of Spanish labour led to a substantial reduction in manpower. Training schemes have been introduced by the Government for a variety of industries to help overcome the loss of labour. The pre-closure level of economic activity is, however, maintained by Moroccan labour, which supplements local manpower. Tourism has been adapted to cater for longer-stay visitors in contrast to the larger numbers of day trippers who visited Gibraltar when the border was open.

The construction industry ranks almost equal with the Naval Base and Dockyard as a source of employment. Many of the demands on the construction industry emanate from the Government's development programme and the building requirements of the defence establishment in the territory. The current development programme,

GIBRALTAR

which will run from 1975-78, includes substantial spending on education, housing, health and port development. British development aid in support of the programme is running at £2.5 million per annum.

The retail price index rose by 16 per cent in 1976 and imports have nearly trebled in five years. However, with invisible earnings taken into account, the balance of payments showed a surplus of about £6 million in 1976 and prospects remain good, despite the continuing blockade and the fall in the value of sterling.

Transport and Communications

The port offers good anchorage for ships of all tonnages. Wharf space is ample for both landing passengers and handling cargo, and there are dry dock facilities and a commercial ship repair yard. Tax concessions are available to ship-owners who register their ships at Gibraltar. The use of the port for various incidental purposes is due, in part, to its strategic position at one of the main crossroads of world shipping. The Strait of Gibraltar is a main artery for sea traffic between the Mediterranean and Black Sea areas and Europe, the Americas, Africa, India, the Far East and Australia. There is a fortnightly container service operating between Gibraltar and Sheerness, England. Some 70 cruise ships per annum call at Gibraltar and a passenger and car-ferry service operates between Gibraltar and Tangier. Air services are frequent to the United Kingdom and Tangier. There are bus services and taxis but no railway. There are 49.9 km. of road and over 6,800 vehicles.

Social Welfare

The Social Security system consists of two contributory schemes covering employment injuries insurance and social insurance benefits such as old age pensions, maternity and death grants, widow's benefit and unemployment benefit, and non-contributory schemes financed from the general revenue and covering retirement pensions, elderly persons' pensions, family allowances and supplementary benefits. There are special arrangements to cater for blind persons, the aged and discharged prisoners.

Education

Education is compulsory between the ages of 5 and 15 and is provided free in government schools. There are several nursery schools, twelve government primary schools, two Services schools administered by the Ministry

Introductory Survey, Statistical Survey

of Defence for the children of military personnel, one private school and two comprehensive schools—one for boys and one for girls. Scholarships for university students are provided by the Government and from private sources.

Tourism

The airport and sea facilities have made Gibraltar a centre of communications for the West Mediterranean countries and North Africa. The restriction of land communications with Spain has stimulated the development of Gibraltar as a tourist centre in its own right, where the transient visitor is being replaced by the long-stay tourist and package holidays are increasing. The expansion of hotels and the casino, the improvement of beaches and the provision of amenities have all contributed to this change. Conference facilities are being provided and cruise traffic is growing. Excluding hotel and travel costs, annual tourist spending currently amounts to an estimated £4.5 million.

Visas are not required except for: (a) stateless persons, (b) nationals of Albania, Bulgaria, People's Republic of China, Cuba, Czechoslovakia, German Democratic Republic, Hungary, Mongolia, Democratic People's Republic of Korea, Poland, Romania, the U.S.S.R. and Viet-Nam, who will not, however, require visas when travelling in direct transit by air.

Sport

A great variety of sports are popular, including fishing, swimming, water-skiing, football, hockey, tennis, athletics, rowing and cricket.

Public Holidays

1978: March 24th (Good Friday), March 27th (Easter Monday), May 1st (Spring Bank Holiday), May 24th (Commonwealth Day), June 3rd (Queen's Official Birthday), August 28th (Late Summer Bank Holiday), December 25th (Christmas), December 26th (Boxing Day).

1979: January 2nd (New Year).

Weights and Measures

Imperial weights and measures are in use (*see* United Kingdom), but the metric system is gradually being introduced.

THE CONSTITUTION

Gibraltar is a Crown Colony, and the supreme authority is vested in the Governor and Commander-in-Chief, who is the representative of the Queen. Relations with the British Government are maintained through the Foreign and Commonwealth Office.

On December 1st, 1921, the creation of the City Council gave the inhabitants of Gibraltar a certain representation in the management of municipal affairs. In addition a Legislative Council, defined by an Order-in-Council, was inaugurated in 1950, and included elected members. Its composition was modified several times, notably by the Gibraltar (Constitution) Order, 1964, and the Gibraltar Royal Instructions, 1964, which gave it greater control of internal affairs.

Since 1969 Gibraltar has had full control over most of its own internal affairs, while the United Kingdom is responsible for matters of external affairs, defence and internal security. Following the Referendum of September, 1967, in which the people of Gibraltar showed their overwhelming support for remaining under British sovereignty, discussions on appropriate constitutional changes took place between the British Government and representatives of Gibraltar during 1968. The resultant new Constitution was introduced in August, 1969. The Constitution contains a code of human rights and provides for its enforcement by the Supreme Court of Gibraltar. The other main provisions are described below.

BRITISH SOVEREIGNTY

The Preamble to the Gibraltar Constitution Order contains assurances that Gibraltar will remain part of Her Majesty's dominions unless and until an Act of Parliament otherwise provides and that Her Majesty's Government will never enter into arrangements under which the people of Gibraltar would pass under the sovereignty of another State against their freely and democratically expressed wishes.

THE GOVERNOR AND COMMANDER-IN-CHIEF

As representative of the Queen, the Governor and Commander-in-Chief is responsible for matters which directly relate to external affairs, defence and internal security and certain other matters not specifically defined as domestic matters. He is also head of the executive and administers Gibraltar, acting generally on the advice of the Gibraltar Council. In exceptional circumstances he has special powers to refuse any advice from the Gibraltar Council which may not be in the interests of maintaining financial and economic stability. His formal assent on behalf of the Crown is required for all legislation and in some cases the prior concurrence of the Crown conveyed through the Secretary of State.

THE GIBRALTAR COUNCIL

Consists of the Deputy Governor, the Deputy Fortress Commander, the Attorney-General, the Financial and

Development Secretary, *ex-officio*, the Chief Minister, who is appointed by the Governor as the Elected Member of the House of Assembly most likely to command the confidence of the other Elected Members, and four other Ministers designated by the Governor after consultation with the Chief Minister. Advises the Governor, who usually acts on its advice.

COUNCIL OF MINISTERS

Consists of the Chief Minister and not fewer than four nor more than eight other Ministers appointed from the Elected Members of the Assembly by the Governor in consultation with the Chief Minister. It is presided over by the Chief Minister and deals with domestic matters which have been defined as such by the Constitution. Individual Ministers may be given responsibility for specific business. Heads of Departments and other government officials appear before it when required.

THE GOVERNMENT

HOUSE OF ASSEMBLY

The House of Assembly is composed of a Speaker, 15 elected members and two *ex-officio* members (the Attorney-General and the Financial and Development Secretary). The Speaker is appointed by the Governor after consultation with the Chief Minister and the Leader of the Opposition.

The normal life of the House of Assembly is four years. Elections are open to all adult British subjects and citizens of the Republic of Ireland who have been ordinarily resident in Gibraltar for a continuous period of six months up to the date for registration as an elector. The voting age is 18. The system of proportional representation formerly used for Legislative Council elections has been abandoned in favour of a new system where each elector may vote for a maximum of eight candidates.

The Elected Members of the House of Assembly elect the Mayor from amongst themselves, and he carries out ceremonial and representational functions on behalf of the City of Gibraltar.

GREECE

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Hellenic Republic is a mountainous peninsula between the Mediterranean and Aegean, bounded to the north by Albania, Yugoslavia and Bulgaria and to the east by Turkey. Numerous Greek islands lie to the south, east and west, of which the largest is Crete. The climate is Mediterranean with mild winters and hot summers. The language is modern Greek, of which there are two forms—*katharevoussa*, the formal language, and *demotiki*, the language commonly spoken and taught in schools. The Greek Orthodox Church is the established religion. The Greek national flag (proportions 3 by 2) displays a white cross on a blue ground. The capital is Athens.

Recent History

The liberation of Greece from the German occupation was followed by a civil war which lasted until 1949. The Communist forces were defeated, and the constitutional monarchy re-established. A succession of weak governments and conflicts between King Constantine and his ministers, and an alleged conspiracy involving Centre Union Officers, resulted in a coup led by right-wing army officers in April 1967. An attempted counter-coup led by the King failed and he went into exile. Colonel George Papadopoulos emerged as the dominant personality in the new regime, becoming Prime Minister in December 1967 and Regent in March 1972. The regime produced nominally democratic constitutional proposals, but all political activity was banned and opponents of the regime were expelled from all positions of power or influence. The administration, church and judiciary were filled with supporters of the junta, and Greece was ruled by cabinet decree and martial law.

Following an abortive naval mutiny, said to be supported by the exiled King, Greece was declared a republic in June 1973. In July 1973 George Papadopoulos was appointed President. Martial law was ended and a civilian cabinet appointed in preparation for elections to be held by the end of 1973. A student uprising at the Athens Polytechnic in November 1973 was bloodily repressed by the army, and another military coup overthrew Papadopoulos. Lieut.-Gen. Phaidon Ghizikis was appointed President, and a mainly civilian cabinet led by Adamantios Androutsopoulos installed, but effective power lay with a small group of officers and the military police under Brig.-Gen. Demetrios Ioannides. As a result of the failure of the military junta's attempt to overthrow President Makarios of Cyprus and its inability to prevent the Turkish invasion of the island (*see* chapter on Cyprus), the Androutsopoulos cabinet disintegrated in July 1974. President Ghizikis called Constantine Karamanlis, a former Prime Minister, back from exile to form a civilian Government of National Salvation. Martial law was ended, the press freed and political parties, including the Communists, were allowed to emerge. Elections were held in November 1974 which gave Karamanlis' New Democracy party an overwhelming

majority in Parliament. A referendum in December 1974 rejected proposals for a return to constitutional monarchy, and in June 1975 a new republican Constitution, providing for a parliamentary democracy, was promulgated. In the same month Constantine Tsatsos was elected President.

Apart from an attempted coup in February 1975 the Karamanlis Government remained virtually unchallenged at home from 1975 to 1977. But in November 1977 the Government called a general election to secure a renewed mandate to tackle the serious problems that were expected to arise in 1978, principally the question of entry into the EEC and connected economic problems, and relations with Turkey which had deteriorated markedly during 1976 with a dispute over offshore rights in the Aegean and the continuing failure to reach a settlement in Cyprus. Up until October 1977 several rounds of talks between the two countries had produced no agreement. The election resulted in a reduction in the number of seats held by the New Democracy party, but it retained a majority. The Panhellenic Socialist Movement displaced the Democratic Centre Union as the second largest party.

Government

Under the Constitution of June 1975 the President is Head of State and is elected by Parliament for a five-year term. The President appoints the Prime Minister and, upon his recommendation, the other members of the Government. The Government must enjoy the confidence of Parliament. The unicameral Parliament comprises not fewer than 200 and not more than 300 deputies, directly elected by universal adult suffrage for four years.

Defence

Greece withdrew from military obligations to NATO in July 1974. Military service is compulsory and lasts 28-32 months. The armed forces number 200,000, of whom 148,000 are conscripts, and consist of an army of 160,000, a navy of 17,500 and an air force of 22,500; there is a gendarmerie of 28,000 and also a National Guard of 90,000. Estimated defence expenditure in 1977 totalled 43.313 million drachmae.

Economic Affairs

Greece has traditionally been an agricultural nation, producing most of its own needs and exporting a considerable amount of produce. The country produces large quantities of wheat, barley, maize, tobacco, sugar beet, tomatoes and dried and fresh fruit. However, since 1960 there has been a rapid increase in the importance of industry. Agricultural products accounted for 91.45 per cent of all exports in 1960, with industrial products amounting to 8.55 per cent. By 1974 industrial products represented 63.72 per cent, with agricultural goods amounting to 36.28 per cent.

In 1970 manufactures contributed more to the gross domestic product than agriculture for the first time.

Marked growth in both investment and production was achieved in the fields of metallurgy, chemicals, textiles, rubber, plastics and electrical machinery and appliances. Mineral resources are intensively exploited, and a major development in the progress of the Greek economy has been the processing of an expanding proportion of the ores in Greece, rather than exporting raw materials. Electricity output nearly doubled between 1966 and 1971, new power stations having been built to use lignite deposits and reduce dependence on imported fuel oil, and hydro-electric power-resources are being developed. In 1976 electricity output was 16,321 million kWh.

Industrialization and the expansion of exports, which quadrupled in ten years from 1962-63 to 1972-73, have not saved Greece from a large balance of payments deficit. A current account deficit of U.S. \$404 million in 1972 rose to \$1,241 million in 1974. The deficit was \$999 million in 1975 and \$1,085 million in 1976. The huge trade deficit is partly offset by earnings from tourism and shipping and by workers' remittances from abroad.

In 1976 the country's principal trading partner was the EEC, accounting for 45 per cent of imports and 37 per cent of exports. An association agreement between Greece and the EEC, which came into force in 1962, protects Greek industry from EEC imports but allows Greek industrial products to enter the EEC duty-free. In 1976 Greece's application for full membership of the EEC was approved and negotiations for entry were started.

The economic growth of the 1960s helped to reduce unemployment and emigration, and for some years the drachma was exceptionally stable. But in 1973 the cost of living rose by 30 per cent. The military junta left behind a stagnant economy, stifled by bureaucratic controls, and galloping inflation. However, by 1975 Mr. Karamanlis had restored confidence in the economy and foreign investment rose considerably. By 1976 inflation had been reduced to about 11 per cent. The G.N.P. rose by 5.8 per cent in 1976, compared with 3.3 per cent in 1975. Industrial production increased by 8.5 per cent. A five-year plan for the period 1976-80 was devised, aimed primarily at controlling inflation, expanding investment and achieving an annual growth rate of 6-7 per cent in preparation for entry to the EEC by 1980.

During 1977 economic recovery continued and a growth in G.N.P. of 5 per cent was envisaged. In May 1977 measures to reduce wastage and luxury spending were introduced in order to curb inflation and restrict excessive liquidity. Government policy aimed to restrict wage increases to 15 per cent and keep inflation below 10 per cent.

Transport and Communications

In 1975 Greece had a railway network of 2,476 km. of track. A road network of 36,483 km. covered the country in 1975, consisting of 8,632 km. of main roads and 27,851 km. of secondary roads. The 6 kilometre Corinth Canal shortens the sea journey from the Adriatic to Piraeus (port of Athens) by 325 kilometres. Greece has a large mercantile marine with a total displacement of over 30 million gross tons. Important towns and islands are connected by air transport.

Social Welfare

There is a state social insurance scheme for wage-earners. Salaried staff are provided for by voluntary or staff insurances. Everyone is entitled to an old-age pension and sickness benefit.

Education

Education is free at all levels, and compulsory for all children between the ages of 6 and 12. Just under one million children receive primary education and some 504,000 secondary (1973/74). The illiteracy rate has been reduced from 72 per cent to less than 10 per cent in the last thirty years. The constitution of June 1975 provides for compulsory nine-year education to be implemented not later than 1980.

Tourism

The sunny climate, the natural beauty of the country and its great history and traditions have made Greece a magnet for tourists. There are numerous islands of archaeological interest. The industry is expanding rapidly with the improvement of transport and accommodation facilities. The number of tourists visiting Greece rose dramatically from 1.0 million in 1968 to 4.2 million in 1976. Earnings from tourism, U.S. \$120 million in 1968, amounted to \$824 million in 1976.

FINANCE

100 lepta (singular, lepta) = 1 drachma.

Coins: 10, 20 and 50 lepta; 1, 2, 5, 10 and 20 drachmae.

Notes: 50, 100, 500 and 1,000 drachmae.

Exchange rates (October 1977): £1 sterling = 64.29 drachmae; U.S. \$1 = 36.025 drachmae.

1,000 drachmae = £15.55 = \$27.76.

Note: The new drachma, equal to 1,000 old drachmae, was introduced in May 1954. From April 1953 the exchange rate was U.S. \$1 = 30,000 old drachmae, so the initial rate for the new currency was \$1 = 30 drachmae. Despite two devaluations of the U.S. dollar, this exchange rate remained in force until March 1975, except when the drachma was allowed to "float" between October and December 1973. Since March 1975 the drachma has again been "floating", with its valuation based on the average of a sample group of currencies of Greece's main trading partners. The average market rate (drachmae per U.S. dollar) was: 32.29 in 1975; 36.58 in 1976. In terms of sterling the exchange rate was £1 = 72.00 drachmae from November 1967 to August 1971; and £1 = 78.17 drachmae (1 drachma = 1.279p) from December 1971 to June 1972.

THE CONSTITUTION

The main provisions of the constitution promulgated on June 11th, 1975, are summarized below.

Greece shall be a parliamentary democracy with a President as Head of State. All powers are derived from the people and exist for the benefit of the people. The established religion is that of The Eastern Orthodox Church of Christ.

EXECUTIVE AND LEGISLATIVE

The President

Executive power rests with the President, who is to be elected by Parliament for a period of five years. The re-election of the same person shall be permitted only once. The President represents the state in relations with other nations, is Supreme Commander of the armed forces and may declare war and conclude treaties. The President shall appoint the Prime Minister and, on the Prime Minister's recommendation, the other members of the Government. The President shall convoke Parliament once every year and in extraordinary session whenever he deems it reasonable. In exceptional circumstances the President may preside over the Cabinet, call the Council of the Republic, and suspend Parliament for a period not exceeding 30 days. He may dissolve Parliament at the suggestion of the Government or with the consent of the Council of the Republic. In extraordinary cases he may proclaim referenda. The President has the right of veto over bills passed by Parliament.

The Government

The Government consists of the Cabinet which comprises the Prime Minister and Ministers. The Government determines and directs the general policy of the State in accordance with the constitution and the laws. The Cabinet must enjoy the confidence of Parliament and may be removed by a vote of no confidence. The Prime Minister is to be the leader of the party with an absolute majority in Parliament, or, if no such party exists, the leader of the party with a relative majority.

The Council of the Republic

The Council of the Republic shall be composed of all former democratic Presidents, the Prime Minister, the leader of the Opposition and the parliamentary Prime Ministers of governments which enjoyed the confidence of Parliament, presided over by the President. It shall meet when the largest parties are unable to form a government with the confidence of Parliament and may empower the President to appoint a Prime Minister who may or may not be a member of Parliament. The Council may also authorize the President to dissolve Parliament.

Parliament

Parliament is to be unicameral and composed of not fewer than 200 and not more than 300 deputies elected by direct, universal and secret ballot for a term of four years. Parliament shall elect its own President, or Speaker. It must meet once a year for a regular session of at least five months. Bills passed by Parliament must be ratified

by the President and the President's veto can be nullified by an absolute majority of the total number of deputies. Parliament may impeach the President by a motion signed by one-third and passed by two-thirds of the total number of deputies. Parliament is also empowered to impeach present or former members of the Government. In these cases the defendant shall be brought before an *ad hoc* tribunal presided over by the President of the Supreme Court and composed of twelve judges. Certain legislative work, as specified in the constitution, must be passed by Parliament in plenum, and parliament cannot make a decision without an absolute majority of the members present, which under no circumstances shall be less than one quarter of the total number of deputies. The constitution provides for certain legislative powers to be exercised by not more than two Parliamentary Departments. Parliament may revise the constitution in accordance with the procedure laid down in the constitution.

THE JUDICIAL AUTHORITY

Justice is to be administered by courts of regular judges, who enjoy personal and functional independence. The President, after consultations with a judicial council, shall appoint the judges for life. The judges are subject only to the constitution and the laws. Courts are divided into administrative, civil and penal and shall be organized by virtue of special laws. They must not apply laws which are contrary to the constitution. The final jurisdiction in matters of judicial review rests with a Special Supreme Tribunal.

Certain laws, passed before the implementation of this

constitution and deemed not contrary to it, are to remain in force. Other specified laws, even if contrary to the constitution, are to remain in force until repealed by further legislation.

INDIVIDUAL AND SPECIAL RIGHTS

All citizens are equal under the constitution and before the law, having the same rights and obligations. No titles of nobility or distinction are to be conferred or recognized. All persons are to enjoy full protection of life, honour and freedom, irrespective of nationality, race, creed or political allegiance. Retrospective legislation is prohibited and no citizen may be punished without due process of law. Freedom of speech, of the Press, of association and of religion are guaranteed under the constitution. All persons have the right to a free education, which the state has the duty to provide. Work is a right and all workers, irrespective of sex or other distinction, are entitled to equal remuneration for rendering services of equal value. *The right of peaceful assembly, the right of a person to property and the freedom to form political parties* are guaranteed under the constitution. The exercise of the right to vote by all citizens over 20 years of age is obligatory. No person may exercise his rights and liberties contrary to the constitution.

The district of Mount Athos shall, in accordance with its ancient privileged status; be a self-governing part of the Greek State and its sovereignty shall remain unaffected.

JUDICIAL SYSTEM

The Constitution of 1975 provides for the establishment of a Special Supreme Tribunal. Other provisions in the constitution provide for a re-organization of parts of the judicial system to be accomplished through legislation.

Special Supreme Tribunal. This court has final jurisdiction in matters of constitutionality.

Council of State. The Council of State has appellate powers over acts of the administration upon application by civil servants or other civilians.

The Supreme Court. This is the supreme court in the State, having also appellate powers. It consists of four sections, three Civil and one Penal, and adjudicates in quorum.

Courts of Appeal. These are eleven in number. They have jurisdiction in cases of Civil and Penal Law of second degree, and, in exceptional cases, of first degree.

Courts of First Instance. There are fifty-eight Courts of First Instance with jurisdiction in cases of first degree, and in exceptional cases, of second degree. They are mixed courts, functioning both as Courts of First Instance and as Penal Courts.

In towns where Courts of First Instance sit there are also Criminal Courts and Juvenile Courts. Commercial Tribunals do not function in Greece, and all commercial cases are tried by ordinary courts of law. There are, however, Tax Courts in some towns.

Courts of the Justice of Peace. There are 360 of these courts throughout the country.

Magistrates' Courts (or simple Police Courts). There are 48.

In all the above courts, except those of the Justice of Peace, there are District Attorneys. In Courts of the Justice of Peace the duties of District Attorney are performed by the Public Prosecutor.

RELIGION

THE ORTHODOX CHURCH OF GREECE

The Greek branch of the Holy Eastern Orthodox Church is the officially established religion of the country, adhered to by nearly 97 per cent of the population. The administrative body of the Church is the Holy Synod of ten members, elected by the 66 bishops of the Hierarchy.

Primate of Greece: Archbishop SERAPHIM of Athens.

Within the Greek State there is also the semi-autonomous Church of Crete, composed of seven Metropolitans and the Holy Archbishopric of Crete. The Church is administered by a Synod consisting of the seven Metropolitans under the Presidency of the Archbishop; it is under the spiritual jurisdiction of the Oecumenical Patriarchate of Constantinople, which also maintains a degree of administrative control.

Archbishop of Crete: The Most Reverend EUGENIUS PSALLIDAKIS (whose See is in Heraklion).

There are also four Metropolitan Sees of Dodecanese, which are spiritually and administratively dependent on the Oecumenical Patriarchate and, finally, the peninsula of Athos, which constitutes the region of the Holy Mountain (Mount Athos) and comprises twenty monasteries. These are dependent on the Oecumenical Patriarchate of Constantinople, but are autonomous and are safeguarded constitutionally.

OTHER CHURCHES

The Roman Catholic Church (Latin Rite): There are an estimated 46,700 Catholics in Greece.

Archdiocese of Athens: Archbishopric, Odos Omirou 9, Athens 135; Archbishop Most Rev. NICOLAUS FOSCOLOS.

Archdiocese of Rhodes: Archbishopric, Odos Drágoni 43, Rhodes; Apostolic Administrator MICHEL PIERRE FRANZIDIS, O.F.M.

Metropolitan Archdiocese of Corfu, Zante and Cefalonia: Catholic Archbishopric, Corfu; Archbishop Mgr. ANTONIO VARTHALITIS.

Metropolitan Archdiocese of Naxos, Andros, Tinos and Myconos: Archbishopric, Tinos (summer residence); Naxos (winter residence); includes the suffragan

dioceses of Chios, Crete, Santorini, Syros and Milo; Archbishop Mgr. GIOVANNI PERRIS.

Apostolic Vicariate of Salonika (Thessaloniki): Leofores Vasilissis Olgas 120B, Thessaloniki; Apostolic Administrator DEMETRIO ROUSSOS, S.J.

The Roman Catholic Church (Byzantine Rite): 2 parishes (Athens and Jannitsa, Macedonia); 14 secular priests, 24 religious sisters, some 2,500 Catholics (1975 estimate); a seminary, a hospital, 2 student hostels, an old people's home; *Kalos Typos* publishing co.; publ. *Katholiki* (weekly), circ. 2,500.

Apostolic Exarchate for the Byzantine Rite in Greece: Odos Acharnon 246, Athens 815; Exarch Apostolic Mgr. ANARGHYROS PRINTESSIS, Titular Bishop of Gratianopolis.

The Roman Catholic Church (Armenian Rite): 1 secular priest, 640 Catholics.

Episcopacy of the Armenian Rite in Greece: René Pio St., Athens 409; Bishop JOHN KOYOUNIAN.

The Greek Evangelical Church (Presbyterian): 35 Ziini St., Athens 404; f. 1886; comprising 30 organized churches embraces about 3 per thousand of population; member of World Alliance of Reformed Churches; Moderator Rev. EMMANOUEL SMPRAN, M.Th.; publ. *Star of the East* (monthly).

Islam: the law provides as religious head of the Muslims a Chief Mufti; the Muslims in Greece possess a number of mosques and schools.

Judaism: the Jewish population of Greece, estimated in 1943 at 75,000 people, was decimated as a result of the German occupation. In 1973 there were about 5,000 Jews in Greece.

Rabbi of Athens: JACOB D. ARAR, 5 Melidoni St., Athens.

Central Board of the Jewish Communities of Greece: Odos P. Tsaldari 46, Athens; f. 1945; officially recognized representative body of the community; Pres. ALBERT I. COVO.

THE PRESS

In 1975 total newspaper circulation was about 1 million. Afternoon papers are more popular than morning ones; in the Athens area fewer than 100,000 papers are sold in the morning, but up to 400,000 in the afternoon.

INLAND WATERWAYS

There are no navigable rivers in Greece.

The Corinth Canal: built 1893; over six km. long, links the Corinthian and Saronic Gulfs. The Canal shortens the journey from the Adriatic to the Piraeus by 325 km.; it is spanned by three single-span bridges, two for road and one for rail. The canal can be used by ships of a maximum draught of 22 ft. and a width of 60 ft. During 1976, 9,438 ships with a total tonnage of 4,616,852 n.r.t. passed through the Corinth Canal.

SHIPPING

In July 1976 there were 3,368 merchant ships under the Greek flag, including 2,353 cargo vessels, 490 tankers and 317 passenger ships. The total gross tonnage of the Greek merchant fleet was 30,237,837 in March 1977. At the end of 1976, 1,294 Greek-owned ships were sailing under foreign flags. The principal ports are Piraeus, Patras and Thessaloniki.

Among the largest shipping companies are:

HUNGARY

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Hungarian People's Republic lies in Eastern Europe, bounded to the north by Czechoslovakia, to the east by the U.S.S.R. and Romania, to the south by Yugoslavia and to the west by Austria. Its climate is continental with long, dry summers and severe winters. The language is Hungarian (Magyar). Roman Catholics are the largest single religious denomination, claiming between three and four million adherents. Other groups are the Hungarian Reformed Church, the Lutheran Church and the Hungarian Orthodox Church. The national flag (proportions 3 by 2) consists of three horizontal stripes of red, white and green. The capital is Budapest.

Recent History

Hungary allied itself with Germany during the Second World War, and having sought to break the alliance in 1944 was occupied by German forces. Liberated in 1945 by Soviet troops, Hungary became a Republic a year later. Land redistribution and nationalization measures followed, despite opposition from the Roman Catholic Church under Cardinal Mindszenty, until in 1949 a People's Republic was declared. Mátyás Rákosi became the leading figure as First Secretary of the Workers' Party. Opposition was subsequently removed by means of purges and political trials. Rákosi became Prime Minister in 1952 but after the death of Stalin a year later lost this post to the more moderate Imre Nagy, and a short period of liberalization followed. Rákosi, however, remained as First Secretary of the Party and in 1955 Nagy was forced to resign. András Hegedüs, sponsored by Rákosi, was appointed Prime Minister. In-fighting between the Rákosi and Nagy factions increased in 1956 after the revelations of the 20th C.P.S.U. Congress in Moscow; in July Rákosi was forced to resign but was replaced by a close associate Ernő Gerő. The consequent discontent led to demonstrations and in October 1956 fighting broke out. Nagy was returned as Prime Minister and headed a series of governments. He promised various controversial reforms, but fighting continued and in November a new government headed by János Kádár was set up. Soviet troops, stationed in Hungary under the 1947 peace treaty, were asked to intervene. Kádár also took over as head of the newly formed Hungarian Socialist Workers' Party. He held the premiership until 1958 and from 1961 to 1965, and under his leadership government became less severe and more stable. Economic reforms, in particular those introduced in 1968, have brought a considerable increase in the standard of living and they have been accompanied by modest social and political reforms. The National Assembly elections of 1971 proved to be a cautious experiment in extending democracy, strengthening the right of the electorate to nominate candidates and giving them the opportunity to nominate two or more candidates for a given constituency, thus providing wider representation in the Assembly. A number of seats were contested in 1971 and in June 1975, when the elections resulted in a 99.6 per cent vote in favour of the Patriotic People's Front. The

electoral law was amended before the 1975 election to extend the life of the Assembly from four to five years.

Hungary is closely aligned with the countries of Eastern Europe through its membership of the Warsaw Pact, whose forces it joined in entering Czechoslovakia in 1968.

Government

Under the 1949 Constitution, the highest organ of state power in the Hungarian People's Republic is the unicameral National Assembly, with 352 members elected for five years by universal adult suffrage (at the last election, in June 1975, 318 members were elected unopposed while 34 seats were each contested by two candidates). The Assembly elects from its members a Presidential Council (20 members in 1977) to be its permanent organ and the state's executive authority, responsible to the Assembly. The President of the Council is the Head of State. The Council of Ministers, the highest organ of state administration, is elected by the Assembly on the recommendation of the Presidential Council.

Political power is held by the (Communist) Hungarian Socialist Workers' Party (HSWP), the only legal party, which dominates the Patriotic People's Front. The Front presents an approved list of candidates, nominated at public meetings, for elections to representative bodies. No other candidates are permitted. The HSWP's highest authority is the Party Congress, which elects a Central Committee (125 members were elected in March 1975) to supervise Party work. The Central Committee elects a Political Committee (Politburo) of 15 members to direct policy.

For local administration Hungary is divided into 19 counties and the capital city.

Defence

Hungary was a founder member of the Warsaw Pact in 1955 and in 1969 joined the Geneva Disarmament Commission. Military service starts at the age of 18 years and lasts for a maximum of two years. Total regular forces in 1977 numbered 103,000: army 83,000, air force 20,000 and a marine force. There is also an armed force of 20,000 border guards and 60,000 Workers' Militia. The 1977 defence budget was 13,150 million forints.

Economic Affairs

In 1968 a new system of economic management was introduced, known as the "new economic mechanism". The official definition of the plan is "to harmonize State planning and market development". Until then the economy had been based on the standard Soviet central planning system, but under the new scheme industry is being decentralized to a certain extent. The aim is to evolve a Socialist market economy in which business enterprises produce what they want, engage in competition on the domestic and foreign markets and share profits among the workers.

The major targets of the fourth Five-Year Plan (1971-75) were exceeded. National income rose by 35 per cent over

HUNGARY

the previous five-year period, industrial production increased by 38 per cent, and agricultural output by 18 per cent. Investment expanded by 40 per cent, and foreign trade turnover went up by 60 per cent.

The 1976-80 Plan aims at increased productivity and efficiency, and envisages a 30-32 per cent increase in national income. It stresses the modernization of industry, and industrial production should rise by 33-35 per cent. The engineering and chemical industries, in particular, are being greatly expanded. Increased mechanization of agriculture is planned, and output should go up by 16-18 per cent. Investment is scheduled to rise by 25 per cent.

Hungary was formerly a predominantly agricultural country but, since the war, industry has become the largest sector of the economy. In 1975 industry employed 37 per cent of the labour force and produced 47 per cent of net material product. Hungary is an exporter of engineering products, machine tools, buses, telecommunications and electrical equipment, electronic and other instruments. It is still a large exporter of meat, fruit and vegetables and half its exports to Western European countries consists of agricultural produce. In 1975 and 1976, however, unfavourable weather conditions seriously affected agricultural output, and proposed targets were not reached. About 94 per cent of arable land is state or co-operatively owned. Vineyards cover 500,000 acres.

Industrial production rose by 5 per cent in 1975 and 6 per cent in 1976, while national income increased by 5 and 3 per cent respectively. In 1976 Hungary's foreign trade went up by 6 per cent over the previous year. Exports rose by 8 per cent, and imports by only 4 per cent. A 35 per cent cut in the overall visible trade deficit was achieved. Principal imports are crude oil, iron ore, copper and copper products, raw materials for the plastics industry, chemical fibres, artificial fertilizers, paper, cotton, animal foodstuffs, capital and consumer goods. A substantial part of imported raw materials comes from the Soviet Union, and increased costs have affected the planned growth rate of the Hungarian economy since 1975, when the cost of petroleum imports more than doubled.

Hungary is a member of the Council for Mutual Economic Assistance (CMEA) and, since 1973, of GATT. Trade with members of the CMEA accounts for almost 70 per cent of total foreign trade.

Transport and Communications

The Hungarian State Railways operate 7,914 kilometres of track, of which 1,196 kilometres are electrified. There are about 30,000 kilometres of main or secondary roads. Navigable inland waterways total some 1,688 kilometres. There is a small merchant fleet using mainly Hungarian-built vessels of an average tonnage of 1,100 tons. These operate from the Danube to Mediterranean ports and the United Kingdom. The state airline MALÉV has an extensive network of flights to Europe and the Middle East, but there are no internal flights in Hungary.

Social Welfare

Since April 1972, all Hungarian citizens have been covered by the country's social insurance network; in the same month the right to care in sickness, old age or disability was written into the Constitution.

The national insurance scheme is largely non-contribu-

Introductory Survey

tory. Employees contribute between 3 and 10 per cent of salary to the pension fund. The employer pays 4 per cent for each person employed. Cost of health services and other social services is met by state subsidies and contributions from the place of work.

A uniform system of pensions was introduced in June 1975, whereby workers, employees and members of co-operatives draw between 33 and 75 per cent of their earnings, according to the number of years of service. Male workers are usually entitled to old-age pensions at the age of 60 and women at 55. Various other pensions are paid, including invalid pensions, widows' pensions, and orphans' allowances.

Social insurance covers sickness benefits which are available from the first day of sickness. Patients are entitled to sick pay for one year, or two years in the case of tuberculosis. All medical consultation and treatment is free, although a charge of 15 per cent of the total price is generally made for medicines and medical appliances. The social insurance scheme also covers maternity benefits.

Education

The Educational Act of 1961 modernized the Hungarian educational system and provided the basis of the present-day system. Various changes have been made since 1961, including the revision of the basic school system in 1963, and the introduction of a uniform curriculum in the grammar school in 1965. Children under the age of 3 years attend crèches (*bölcsődék*), and those between the ages of 3 and 6 years attend kindergartens (*óvodák*). Crèches come under the jurisdiction of the Ministry of Health, but kindergartens are considered part of the education system and come under the Ministry of Education. They are not compulsory, but in 1976 almost 80 per cent of children in this age group were attending. Compulsory education begins for the Hungarian child at 6 years of age when he attends the basic school (*általános iskola*). Basic education continues until the child is 14, during which time he will be taught general subjects together with some practical training. Provision is made in the basic school for talented children, particularly those who are linguistically inclined. Facilities for secondary education were improved as a result of the 1961 Educational Act. Children are now required to attend school until the age of 16 years. There are four types of secondary school, excluding special schools for the very gifted or, alternatively, the backward or abnormal child. The majority of children prefer to continue with their education after 16 years of age. The most popular types of secondary school are the grammar school (*gimnázium*) and the *technikum*. The *gimnázium* provides a four-year course of mainly academic studies, although some vocational training does figure on the curriculum. The *technikum* offers full vocational training together with a general education, emphasis being laid on practical work. Apprentice training schools (*ipari tanulók gyakorló iskolái*), are attached to factories, agricultural co-operatives, etc., and lead to full trade qualifications. General education is less important as part of the curriculum in this type of school. Further educational reform is being directed at revising the curricula and the way in which the performance of pupils is assessed.

Over the past few years demand for education in Hungary has been increasing at an exceptional rate and this is

HUNGARY

reflected in the government's promotion of educational expansion. Both the number of higher educational institutes and the number of students have increased considerably since before the Second World War, and there are about 110,000 students in 56 higher institutes, including 9 universities and 9 technical universities.

Tourism

Tourism is developing rapidly. Lake Balaton is the main holiday centre for boating, bathing and fishing. The cities have great historical and recreational attractions. Budapest has numerous swimming pools watered by thermal springs. In 1976 there were 9,910,400 foreign visitors.

Nationals of Czechoslovakia, Finland, Poland, Romania, U.S.S.R. and Yugoslavia do not require visas to enter Hungary.

Sport

Football is the most popular sport. Swimming, athletics and fencing are also much favoured. Winter sports are

popular. Hunting in many parts of the country attracts large numbers of foreign visitors, notably from Germany.

Public Holidays

1978: March 27th (Easter Monday), April 4th (Liberation Day), May 1st (Labour Day), August 20th (Constitution Day), November 7th (October Revolution Day), December 25th and 26th (Christmas).

1979: January 1st (New Year's Day).

THE CONSTITUTION

(Adopted in August 1949; amended April 1972.)

NATIONAL STATUS

Hungary is a People's Republic, a State of workers and working peasants, in which all power belongs to the working people and is exercised through elected representatives. The Republic defends the power and liberty of the working people and the independence of the country and opposes the exploitation of man.

SOCIAL STRUCTURE

The bulk of the means of production is owned by the State, by public bodies or by co-operative organizations, and state and co-operative ownership enjoy equal status. Means of production may also be privately owned. The national economy is directed by the State power of the people. The economic life of the Republic is determined by a State national economic plan in which the State strives to expand the forces of production, increase national wealth, raise material and cultural standards and strengthen the defences of the country. All natural resources, means of communication, banks, mines and major industrial plants are the property of the State. Foreign trade is carried out both by state trading companies and by companies and enterprises with export-import rights.

The Republic recognizes and guarantees the right of the working peasants to the land and regards it as its duty to assist the socialist development of agriculture. The State supports every genuine co-operative movement of the workers that is directed against exploitation. The Constitution recognizes and protects all property acquired by labour and guarantees the right of inheritance. Private enterprise is not allowed to run counter to the public interest.

Labour is the base of the social order and every able-bodied citizen has the right and the duty to work to the best of his ability. By their labour, the workers serve the cause of socialist construction.

GOVERNMENT PARLIAMENT

The highest organ of State authority in the Hungarian People's Republic is Parliament which exercises all the rights deriving from the sovereignty of the people and determines the organization, direction and conditions of government. Parliament enacts laws, determines the State budget, decides the national economic plan, elects the Presidential Council and the Council of Ministers, directs the activities of ministries, decides upon declaring war and concluding peace and exercises the prerogative of amnesty.

Parliament is elected for a term of five years and members enjoy immunity from arrest and prosecution without parliamentary consent. It meets at least twice a year and is convened by the Presidential Council or by a written demand of one-third of its members. It elects a speaker, two deputy speakers and six recorders from among its own members, and it lays down its own rules of procedure and agenda. As a general rule, the sessions of Parliament are held in public.

Parliament has the right of legislation which can be initiated by the Presidential Council, the Council of Ministers or any member of Parliament. Decisions are valid only if at least half of the members are present, and they require a simple majority. Constitutional changes require a two-thirds majority. Acts of Parliament are

signed by the President and the Secretary of the Presidential Council. Parliament may set up committees.

Parliament may pronounce its dissolution before the expiration of its term, and in the event of an emergency may prolong its mandate or may be re-convened after dissolution. A new Parliament must be elected within three months of dissolution and convened within one month of polling day. At its first sitting Parliament elects from among its members the Presidential Council, consisting of a President, two Vice-Presidents, a Secretary and seventeen members. The Chairman of the Council of Ministers, its Deputy Chairmen and its members are ineligible for election to the Presidential Council.

Members of Parliament are elected on the basis of universal, equal and direct suffrage by secret ballot, and they are accountable to their constituents, who may recall them. All citizens of eighteen years and over have the right to vote, with the exception of those who are unsound of mind, and those who are deprived of their civil rights by a court of law.

PRESIDENTIAL COUNCIL

The Presidential Council may issue the writ for a general election, convene Parliament, initiate legislation, hold plebiscites, direct local government, conclude international treaties, appoint diplomatic representatives, ratify international treaties, appoint higher civil servants and officers of the armed forces, award orders and titles, and exercise the prerogative of mercy. It may annul or modify by-laws, dissolve local organs of government and, when Parliament is not in session, may enact laws. The Presidential Council is responsible to Parliament, which can recall it.

COUNCIL OF MINISTERS

The highest organ of State administration is the Council of Ministers, responsible to Parliament and consisting of a Chairman, Deputy Chairmen, Ministers of State and other Ministers who are elected by Parliament on the recommendation of the Presidential Council. The Council of Ministers directs the work of the ministries (listed in a special enactment), and ensures the enforcement of laws and the fulfilment of economic plans; it may issue decrees and annul or modify measures taken by any central or local organ of government.

LOCAL ADMINISTRATION

The local organs of State power are the county, district, town, borough and town precinct councils, whose members are elected for a term of five years by the voters in each area. Local councils direct economic, social and cultural activities in their area, prepare local economic plans and budgets and supervise their fulfilment, enforce laws, supervise subordinate organs, maintain public order, protect public property and individual rights, direct local economic enterprises and support co-operatives. They may issue regulations and annul or modify those of subordinate councils. Local Councils are administered by an Executive Committee elected by and responsible to them.

JUDICATURE

Justice is administered by the Supreme Court of the Hungarian People's Republic, county and district courts. The Supreme Court exercises the right of supervising in principle the judicial activities and practice of all other courts.

HUNGARY

All judicial offices are filled by election; Supreme Court, county and district court judges are all elected for an indefinite period; the President of the Supreme Court is elected by Parliament. All court hearings are public unless otherwise prescribed by law, and those accused are guaranteed the right of defence. Under a new law on criminal procedure which came into force on January 1st, 1974, an accused person must be considered innocent until proved guilty.

PUBLIC PROSECUTOR

The function of the Chief Public Prosecutor is to watch over the observance of the law. He is elected for a period of six years by Parliament, to whom he is responsible. The organization of public prosecution is under the control of the Chief Public Prosecutor, who appoints the public prosecutors.

RIGHTS AND DUTIES OF CITIZENS

The Hungarian People's Republic guarantees for its citizens the right to work and to remuneration, the right

The Constitution, The Government, National Assembly

of rest and recreation, the right to care in old age, sickness or disability, the right to education, and equality before the law; women enjoy equal rights with men. Discrimination on grounds of sex, religion or nationality is a punishable offence. The State also ensures freedom of conscience, religious worship, speech, the Press and assembly. The right of workers to organize themselves is stressed in order to promote democracy, socialist construction, cultural and educational development and international solidarity. The freedom of the individual, and the privacy of the home and of correspondence are inviolable. Freedom for creative work in the sciences and the arts is now also guaranteed by the Constitution under the amendments adopted in 1972.

The basic freedoms of all workers are guaranteed and foreign citizens enjoy the right of asylum.

It is the fundamental duty of all citizens to defend the property of the people, consolidate social assets, increase economic strength, raise the living standards and cultural level of the workers, and strengthen the people's democratic system. Military service and the defence of their country are the duties of all citizens.

JUDICIAL SYSTEM

The Hungarian judicial system was established by a law passed in 1954. This was modified by acts of parliament passed in 1962 and 1973. The administration of justice is the function of the county district courts, the municipal district courts, the county courts, the Municipal Court of Budapest and the Supreme Court. The system of appeal is as follows: appeals against the decisions of county district courts and municipal district courts are considered by the county courts or the Municipal Court of Budapest. Appeals against the decisions of the latter as court of first instance are considered by the Supreme Court. The Chief Public Prosecutor and the President of the Supreme Court have the right to submit to the Supreme Court protest on legal grounds against the final decision of any court.

Under the new 1973 act which came into force on January 1st, 1974, procedure is now differentiated for criminal offences which cover minor infringements of the law, and for crimes. In the first instance, cases involving

a criminal offence can be dealt with by a professional judge. Where a crime is involved, the case is heard before a Council of Three, consisting of one professional judge and two lay assessors, and, in major cases, before a Council of Five, consisting of two professional judges and three lay assessors. In the second instance and at the Supreme Court, only regular judges may preside. The president of the Supreme Court is elected by Parliament for five years and all judges are elected by the Presidential Council for an indefinite period. The lay assessors are elected by the local councils.

The Chief Public Prosecutor is responsible for exercising supervision over legality in all fields except the function of the courts.

President of the Supreme Court: Dr. ÖDÖN SZAKÁCS.

Minister of Justice: Dr. MIHÁLY KORÖM.

Chief Public Prosecutor: Dr. KÁROLY SZIJÁRTO.

THE PRESS

The Hungarian Constitution guarantees freedom of the Press and freedom of speech, but the Press is in fact constrained to promote the ideological aims of the Hungarian Socialist Workers' Party and fundamental criticism of the political system is not permitted. On the other hand, failures in public administration, economic, cultural and other fields, are commonly criticized in editorials and grievances publicized in letters from members of the public. Since 1963 all official institutions so criticized have been legally obliged to investigate the matter promptly.

Conversely, considerable legislation is designed to prevent the abuse of Press rights; Article 127 of the penal code penalizes the provoking of hatred of minorities by the Press; incitement and libel are similarly dealt with. Since a decree in 1959, persons and institutions victimized by false Press reports may claim rectification which a government minister is empowered to enforce.

No body has the right to exercise censorship but after the crisis of 1956 a Government Information Office was set up, with nation-wide authority over the press, including the right to grant licences and ensure newsprint distribution, and the task of seeing that all government decrees and decisions are made available to the press. The national news agency, Magyar Távirati Iroda (MTI), handles the bulk of foreign news and has bilateral agreements with the major world agencies.

As in many East European countries most papers are the organs of political parties, trade unions, youth and social organizations. A wide range of specialist periodicals is published by societies, factories, scientific institutions, etc. There is no private ownership of publications but since 1957 independent commercial organizations have received publishing licences.

The high circulation of daily papers enables publishing houses to produce high standard specialized periodicals. Moreover, the state gives direct subsidies to certain education, medicine and literature publications, to the religious press and to the four minority language papers. As a result at least six literary periodicals of 132-480 pages each are enabled to appear monthly. Some 80 per cent of newspapers are sold by subscription.

There are 29 dailies with an average total circulation of 2,663,000. These include 21 provincial dailies which have a combined daily circulation of about 993,000. Four of the five Budapest dailies sell a total of about 1,403,000 copies and circulate nationally. In order of popularity they are: *Népszabadság* (762,000), *Népszava* (285,000), the evening *Esti Hírlap* (236,000) and *Magyar Nemzet* (125,000). *Népszabadság*, the most important daily, is the central organ of the Socialist Workers' Party. Otherwise the paper most respected for the quality of its news coverage and commentary is *Magyar Nemzet*.

Weekly newspapers and periodicals number 57; there are 99 fortnightly journals and 331 monthlies. Among the most popular are the illustrated weeklies, which have recently experienced considerable increases in circulation, and of which the most significant are the satirical *Ludas Matyi* (526,000), the women's magazine *Nők Lapja* (700,000), the illustrated news journal *Képes Újság* (440,000) and the political paper *Szabad Föld* (400,000). A news magazine giving a high standard of reporting and political discussion is *Magyarország*. Specialized periodicals include 20 cultural publications, 24 medical journals, 26 scientific papers, 14 agricultural and 13 religious publications. Of this last category *Új Ember*, *Evangelikus Élet* and *Új Élet* for Catholic, Lutheran and Jewish congregations respectively, are representative.

PUBLISHERS

Most publishing houses in Hungary are state-owned, but a number of bodies have the right of independent publishing, including Catholic, Calvinist and Lutheran Churches, the National Board of Israelites, the Council of Free Churches, the trade unions, the Hungarian Statistical Office, municipal councils and libraries. Occa-

sionally individuals publish their own works at their own expense.

Since the economic reforms of 1968, directors at the state-owned houses have enjoyed a large measure of independence. As book-publishing is seen primarily as a vehicle for culture and education, rather than for com-

mercial profit, publishing houses receive state support. Subsidies are selective and it is declared policy to give greater support to works considered to be of cultural value, while a tax is levied on "entertainment literature": this is paid into a cultural fund, which provides part of the financial support for other works.

ICELAND

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Republic of Iceland comprises one large island and numerous smaller ones, situated near the Arctic Circle in the North Atlantic Ocean. The main island lies 155 miles south-east of Greenland, 645 miles west of Norway and 500 miles north of Scotland. The Gulf Stream keeps Iceland warmer than might be expected, with average temperatures ranging from 10°C (50°F) in summer to 1°C (34°F) in winter. Icelandic is the official language. The Evangelical Lutheran Church is the established church and embraces 98 per cent of the population. The national flag (proportions 25 by 18) has a red cross, bordered with white, on a blue field, the upright of the cross being to the left of centre. The capital is Reykjavík.

Recent History

Iceland became independent in 1944 when the Convention linking it with Denmark under the Danish throne was terminated. Iceland is a founder member of the Nordic Council (1953) and has belonged to both NATO and the Council of Europe since 1949.

From 1959 to 1971 Iceland was governed by a coalition of the Independence and Social Democratic Parties. In the general election of June 1971 there was a swing to the left, and Ólafur Jóhannesson, the leader of the Progressive Party, formed a coalition government with the People's Alliance and the Union of Liberals and Leftists. After the defeat of the Jóhannesson Government in May 1974, elections held in June showed a swing back to the right, and in August the Independence and Progressive Parties formed a coalition government, led by Geir Hallgrímsson. The coalition has been an uneasy one with serious opposition from the Communist People's Alliance.

After the settlement in 1961 of the first "Cod War" with Britain, the limit of Iceland's territorial waters had been fixed in 1964 at 12 nautical miles. In September 1972 the Jóhannesson Government unilaterally extended fishing limits to 50 miles. This provoked the second "Cod War", in which serious clashes occurred between British frigates, protecting British trawlers inside the 50-mile limit, and Icelandic coastguard vessels trying to enforce the Icelandic extension. Compromise agreements with the United Kingdom and Norway were reached in 1973, but Federal German fishing rights off Iceland were not agreed until 1975.

In October 1975 Iceland unilaterally introduced a fishing limit of 200 nautical miles (370 km.) as a "conservation measure". The 1973 agreement on fishing limits between Iceland and the United Kingdom expired in November 1975 and failure to reach a new agreement led to the third and most serious "Cod War". Casualties occurred, and in February 1976 Iceland broke off diplomatic relations with Britain, the first ever diplomatic break between two NATO countries. In June 1976 the two countries signed a six-month agreement allowing 24 British trawlers per day to fish within Iceland's 200-mile limit. When the agreement ended in December 1976, the British trawler fleet was forced to leave Icelandic waters. In November 1977 no new fishing agreements had been

reached with the EEC, but an eventual agreement was still probable.

Government

According to the Constitution, executive power is vested in the President (elected for four years by universal adult suffrage) and the Cabinet, consisting of the Prime Minister and other Ministers appointed by the President. In practice, however, the President performs only nominally the functions ascribed to him in the Constitution, and it is the Cabinet alone which holds real executive power. Legislative power is held jointly by the President and the Althing (Parliament), with 60 members elected by universal suffrage for four years (subject to dissolution by the President), using a mixed system of proportional representation. The Althing chooses 20 of its members to form the Upper House, the other 40 forming the Lower House. For some purposes the two Houses sit jointly as the United Althing. The Cabinet is responsible to the Althing. Iceland has seven administrative districts.

Defence

Iceland has no defence forces of its own but is a member of the North Atlantic Treaty Organization (NATO). There are units of United States Forces at Keflavik air base, which is used for observation of the North Atlantic, under an agreement of 1951 between Iceland and NATO. An agreement between Iceland and the U.S.A. in October 1974 limited U.S. troops in Iceland to 2,900.

Economic Affairs

The Icelandic economy is excessively dependent on fishing, which provided 72.6 per cent of total visible export receipts and 48.5 per cent of total receipts from goods and services in 1976. Iceland is, therefore, very susceptible to movements in world prices of fish products and the size of its catches. The modernized and expanding trawler fleet supplies about 80 freezing plants, which produce white fish fillets, frozen shrimp, scallops, scampi and capelin. Other fish products, such as oil, meal and salted fish, are major exports.

Very little land is available for cultivation, but good grazing keeps Iceland self-sufficient in meat and milk products. Production costs are high and exports have to be subsidized.

Iceland's only significant natural resource, apart from fish, is its potential for cheap hydro-electric and geothermal power production. Geothermal energy is used for home heating and in diatomite production, and may be more fully exploited as a substitute for increasingly expensive imported oil. Cheap hydro-electricity is used by the aluminium plant owned jointly by the Swiss Alusuisse group and by the Icelandic State. At this plant imported ore is processed, producing ingots and rolling slabs for export. Aluminium exports contributed 16.9 per cent of total visible export receipts in 1976. Other foreign companies have shown an interest in the establishing of plants in Iceland for energy-intensive processes. Norway will own a 45 per cent share in Iceland's first ferro-silicon plant, now under construction in Whale Bay and expected to

ICELAND

produce 50,000 tons of ferro-silicon yearly by 1980. In 1975 construction began on a power station in the north of Iceland which will be the largest in the country, adding 40 per cent to the capacity of the National Electric Board.

In recent years Iceland has experienced severe inflation and a consequent depreciation in the value of the króna. Average retail prices rose by 22 per cent in 1973, 43 per cent in 1974 and 49 per cent in 1975.

During 1975 anti-inflation measures were taken, but failed to achieve the financial stabilization intended. A drop in domestic demand reduced imports by 8 per cent, but, because of the world recession, Iceland's exports also fell by 7 per cent. There was therefore no significant fall in the trade deficit. The 1976 budget was restrictive, combining a credit squeeze and tax increases. As a result, the inflation rate dropped to 32 per cent in 1976 and was 26.7 per cent in the twelve months to August 1977. The 1977 budget aimed to strengthen government finances but inflation and a deficit in the current account continued to be major problems. The Government was hoping for a moderate income settlement with the trade unions in an effort to reduce inflation further, but in June 1977 Iceland's workers were awarded their biggest-ever wage increase after seven weeks of industrial unrest. In October a two-week strike by civil servants over pay cut off most transport and communications. As a result of repeated devaluations, the króna depreciated by 57 per cent between the end of 1973 and mid-1977.

The major importer from Iceland is the U.S.A., but the U.S.S.R. and the Federal Republic of Germany are more important exporters to the country (1976). Iceland joined EFTA in 1970, and in 1972 negotiated a trade agreement with the EEC. Progressive tariff reductions on Icelandic fish exports to the EEC were promised, but their implementation was conditional on the settlement of all fisheries disputes between Iceland and EEC members. The reductions therefore remained in abeyance until July 1st, 1976, after the settlement of the dispute with Britain. The EEC then reduced tariffs to the level to which they would have fallen, had they been in effect since 1972.

Transport and Communications

There are no railways. Much of the interior is uninhabited and the main roads follow the coast line. Regular motor coach services link the main settlements. Heavy freight is carried by coastal shipping. The development plans provide for new roads and harbour installations. Air transport is particularly important to Iceland and is used, for example, to transport agricultural produce from remote districts. There are regular air services between Reykjavík and outlying townships.

Social Welfare

There is a comprehensive system of social security providing a wide range of insurance benefits including old-age pensions, family allowances, maternity grants, widows' pensions, etc. Contributions to the scheme are compulsory. Pension and health insurance now apply to the whole population. Accident insurance applies to all wage and salary earners and self-employed persons—unless they request exemption—and unemployment insurance to the unions of skilled and unskilled workers and seamen in all towns and villages of over 300 inhabitants, as well as to several unions in villages of less than 300 inhabitants.

Education

Education is compulsory and free for all children between the ages of 7 and 15 years. Primary education is available in day schools in urban regions, whilst in the more remote country districts, where there is no state boarding-school, instruction is provided by the "Travelling Teacher" scheme, whereby the pupil receives education in his own home. Ordinary secondary education is then available, lasting three to four years. A good certificate of education after three years at a middle or general secondary school entitles entry to a High School (*Menntaskóli*). The matriculation examination at the end of four years at High School provides the qualification for University entrance. Since Iceland's teachers' training college became the Teachers' University in 1976, Iceland now has two universities and six colleges.

Tourism

Iceland's main attraction for tourists lies in the ruggedness of the interior with its geysers and thermal springs. Mountaineering and pony trekking are increasingly popular as well as skiing and the study of bird life. The number of foreign visitors to Iceland increased by 50 per cent between 1968 and 1971 and has since grown at a steady rate. Tourism contributed 2,250 million krónur to Iceland's balance of payments in 1976, nearly 3 per cent of the total visible and invisible exports.

Visitors from Denmark, Finland, Norway and Sweden do not require a passport to enter Iceland.

Visas are not required by nationals of the following countries: Australia, Austria, the Bahamas, Barbados, Belgium, Botswana, Brazil, Bulgaria, Canada, Chile, Cyprus, Fiji, France, the Gambia, the Federal Republic of Germany, Greece, Grenada, Guyana, India, Ireland, Israel, Italy, Jamaica, Japan, the Republic of Korea, Lesotho, Liechtenstein, Luxembourg, Malawi, Malaysia, Malta, Mauritius, Mexico, Monaco, Morocco, the Netherlands, New Zealand, the Philippines, Portugal, Romania, San Marino, Singapore, Spain, Swaziland, Switzerland, Tanzania, Trinidad and Tobago, Tunisia, Turkey, the United Kingdom and dependencies, the U.S.A., the Vatican City, Yugoslavia.

Sport

The national sport is wrestling, but football, athletics and winter sports are universally popular. All children must, by law, learn to swim.

Public Holidays

1978: March 23rd (Maundy Thursday), March 24th (Good Friday), March 27th (Easter Monday), April 20th (1st day of Summer), May 1st (Labour Day), May 4th (Ascension Day), May 15th (Whit Monday), June 17th (National Day), August 7th (Bank Holiday), December 24th, 25th and 26th (Christmas), December 31st (New Year's Eve).

1979: January 1st (New Year's Day).

100 aurar = 1 Icelandic króna.

Coins: 1, 5, 10 and 50 krónur.

Notes: 100, 500, 1,000 and 5,000 krónur.

Exchange rates (October 1977): £1 sterling = 366.65 krónur; U.S. \$1 = 210.00 krónur.

1,000 krónur = £2.73 = \$4.76.

Note: From August 1961 to November 1967 the exchange rate was U.S. \$1 = 43 krónur. Between November 1967 and November 1968 the rate was \$1 = 57 krónur. From November 1968 to December 1972 the official rate was \$1 = 88 krónur, though from August 1971 the market rate was around 87.5 krónur per \$. In terms of sterling, the exchange rate between November 1968 and August 1971 was £1 = 211.20 krónur. Since June 1973 the króna has been allowed to "float", though the Icelandic authorities have sometimes intervened to adjust the market rate of exchange. The average market rate (krónur per U.S. dollar) was: 90.13 in 1973; 99.95 in 1974; 153.70 in 1975; 182.17 in 1976.

THE CONSTITUTION

(in operation from June 17th, 1944)

THE GOVERNMENT

The President is elected for four years by universal suffrage. All those qualified to vote who have reached the age of 35 are eligible for the Presidency.

The Legislative power is jointly vested in the Althing and the President. The Executive power is exercised by the President and other governmental authorities in accordance with the constitution and other laws of the land.

The President summons the Althing every year and determines when the session shall close. He may adjourn meetings of the Althing but not for more than two weeks nor more than once a year. He appoints the Ministers and presides over the State Council. He may be dismissed only if a resolution supported by three-quarters of the Althing is approved by a plebiscite.

The President may dissolve the Althing. Elections must be held within two months and the Althing must reassemble within eight months.

The Althing is composed of 60 members, 49 of whom are elected by 8 proportionately represented constituencies for a period of four years, while 11 supplementary seats are allotted to the parties for equalization, intended to achieve as near a really proportional representation with regard to the total of votes gained by each party as possible, without raising the total number of members above 60. Substitute members are elected at the same time and in the same manner as Althing members. The Althing is divided into two houses, the *efri deild*, or Upper House, and the *neðri deild*, or Lower House; but sometimes both Houses

work together as a United Althing. The Upper House consists of a third of the members whom the United Althing chooses from amongst the representatives, the remaining two-thirds forming the Lower House. Each House and the United Althing elects its own Speaker. The voting age, both for local administrative bodies and for the Althing, is twenty and all citizens domiciled in Iceland may vote, provided they are of unblemished character and financially responsible.

The budget must be introduced in the United Althing but other bills may be introduced into either House. They must, however, be given three readings in each house and be approved by a simple majority before they are submitted to the President. If he disapproves a bill it nevertheless becomes valid but must be submitted to a plebiscite. Ministers may speak in either House, but may vote only in that of which they are members. The Ministers are responsible to the Althing and may be impeached by that body, in which case they are tried by the Court of Impeachment.

LOCAL GOVERNMENT

For purposes of Local Government the country is divided into Provinces, Districts and Municipalities. The 8 Urban Municipalities are governed by Town Councils, which possess considerable autonomy. The Districts also have Councils and are further grouped together to form the Provinces, over each of which a centrally appointed Chief Official presides. The franchise for municipal purposes is universal above 20 years, conducted on a basis of proportional representation.

IRELAND

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Republic of Ireland is an independent state comprising 26 of the 32 counties making up the island. The remaining six counties in the north come under the jurisdiction of the United Kingdom Government. Ireland lies in the Atlantic, about 50 miles west of Great Britain. The climate is mild and equable. Irish is the official first language, but its use as a vernacular is now restricted to certain areas, collectively known as the Gaeltacht. English is universally spoken. Official documents are printed in English and Irish. Ninety-five per cent of the population are Roman Catholic and 5 per cent Protestant. The national flag (proportions 2 by 1) consists of three vertical bands of green, white and orange. The capital is Dublin.

Recent History

The whole of Ireland was formerly part of the United Kingdom. In 1920 the island was partitioned, the six north-eastern counties remaining part of the U.K., with their own government. In 1922 the 26 southern counties achieved dominion status, as the Irish Free State, the dissolution of the remaining links with Great Britain culminating in the adoption by plebiscite of the 1937 Constitution and the establishment of the Republic in 1949. The partition of Ireland has remained a contentious issue and the Provisional wing of the Irish Republican Army (IRA) has mounted a violent campaign to achieve reunification.

In the general election of February 1973, Fianna Fáil, Ireland's traditional ruling party with 44 years in office to its credit, conceded defeat for only the third time in the 12 elections it has contested. Jack Lynch, Prime Minister since 1966, resigned in March and Liam Cosgrave (Fine Gael) formed a coalition of the Labour and Fine Gael parties.

A tri-partite conference at Sunningdale, England, in December 1973 led to agreement between Ireland and Britain on the status of Northern Ireland's new power-sharing Executive (see Northern Ireland in the United Kingdom chapter), and to proposals for a Council of Ireland to represent both the Republic and Northern Ireland. However, since the breakdown in May 1974 of the Executive, the chances of such a Council's existence have greatly receded, and the Cosgrave Government, in an attempt to find reconciliation with the North, considered constitutional changes which would involve the Republic's renunciation of territorial claims on Ulster. The Government remained committed to power-sharing but resisted any British military withdrawal from the North.

Following the assassination of the British Ambassador by the Provisional IRA in July 1976, the Government introduced stronger measures against terrorism which allowed suspects to be detained for up to seven days without charge. Following criticism by the Defence Minister, the President, Carroll O'Daly, resigned in October 1976. Dr. Patrick Hillery, nominee of the opposition Fianna Fáil, was the only candidate for the presidency and took office in December.

Fianna Fáil won a convincing victory in the general election of June 1977 and Jack Lynch became Prime Minister again in July. Fianna Fáil seeks a British declaration of intent to withdraw from Northern Ireland, and Mr. Lynch has repeated his earlier suggestion that the United Nations should intervene in Ulster. In October 1977 the Government dropped the controversial seven-day detention measures, but the state of emergency introduced in September 1967 remained in effect.

Government

Legislative power is vested in the bicameral National Parliament, comprising a Senate (with restricted powers) and a House of Representatives. The Senate (*Seanad Éireann*) has 60 members, including 11 nominated by the Prime Minister and 49 indirectly elected for five years. The House (*Dáil Éireann*) has 148 members elected by universal adult suffrage for five years (subject to dissolution), using proportional representation.

The President is a constitutional Head of State elected by direct popular vote for seven years. Executive power is effectively held by the Cabinet, led by the *Taoiseach* (Prime Minister), who is appointed by the President on the nomination of the *Dáil*. The President appoints other Ministers on the nomination of the Prime Minister with the previous approval of the *Dáil*. The Cabinet is responsible to the *Dáil*.

Defence

The regular armed forces totaled 14,650 in 1977, of which the army comprised 13,370, the navy 570 and the air force 710. There is a regular army reserve of 490 and a territorial army reserve of 18,200. The defence budget for 1977 was £85 million. Military service is voluntary.

Economic Affairs

The economy is largely based on agriculture, which accounts for about one-sixth of the national income and for nearly 45 per cent of total exports. Ireland's accession in January 1973 to the EEC came at a time of a world beef shortage but price fluctuations between 1973 and 1975 led to difficulties for Ireland's beef industry in exporting to continental Europe. Dairy produce now provides the best returns. Agricultural output as a whole, however, increased in 1976.

Tourism continues to be Ireland's second industry and in 1975 total revenue was £161 million, a substantial increase over 1974.

Major industrial expansion has taken place since 1960, and is promoted by the Industrial Development Authority. The principal industrial groups are food and drink, metals and engineering, textiles and tobacco. In 1976 production declined in the traditional and labour-intensive industries like clothing and furniture, but increased in the chemical, textile and engineering industries.

The main exports are beef, chemicals, machinery, dairy products, textiles and live cattle. The United Kingdom is the principal foreign trade partner, taking almost 50 per

cent of exports and providing about 50 per cent of imports. In recent years, however, Ireland has diversified its external trade and, since its accession to the EEC, has forged stronger trade links with other European countries. It is currently investigating offshore oil and natural gas resources. Production from the Kinsale Head natural gas field is scheduled to start in 1979, when it will be used for fertilizer and will provide 12 per cent of Ireland's energy requirement. Europe's largest zinc mines opened at Navan in 1977.

At present, Ireland has the highest rates of unemployment and inflation in the EEC. Unemployment remained at 12 per cent throughout 1976 and 1977, while inflation fell from 18.5 to 15 per cent over the same period. Increased food subsidies were introduced after the devaluation of the "Green Pound" in January 1977. This helped to moderate the inflation rate, which was expected to reach single figures by February 1978. G.N.P. increased by 3.5 per cent in 1976, exports rose by 25 per cent and the country has the resources of both minerals and manpower to take advantage of an upturn in the economy.

Transport and Communications

There were 1,906 miles of railways operated by the State-owned Irish Transport Company (CIE) in 1976. In 1974 the extent of the roads system was 55,306 miles, 9,904 miles of which were main roads. Chief sea ports are Dublin and Dún Laoghaire, Cork, Waterford, Rosslare, Limerick, Foynes, Galway, New Ross, Drogheda, Dundalk, Fenit and Whiddy Island. There are international airports at Shannon, Dublin and Cork, of which Shannon is used for transatlantic flights. The national airline is Aer Lingus.

Social Welfare

Social welfare benefits in Ireland fall into two general categories: (1) those received under compulsory insurance schemes by contributors and their dependants; and (2) those received on a non-contributory basis by people of inadequate means. Children's allowances are also paid to all households for each child without regard to family means.

Social Welfare Insurance is now compulsory for both manual and non-manual workers. The social insurance scheme provides for widows', retirement and old age pensions, unemployment, disability and invalidity benefits and death grants. The cost is shared by the employer, the employee and the State. An occupational injuries benefit scheme is also in operation.

People of inadequate means who are not entitled to benefit under these contributory schemes may receive non-contributory pensions or other benefits from the State or other public funds. These benefits include widows' pensions, deserted wives' allowances, old age and blindness pensions, home assistance and unemployment assistance.

The Health Service in Ireland operates according to income: all services are available free to lower income groups (which comprise some 35 per cent of the population) while middle income groups receive certain services free and upper income groups generally pay for their health services. Approximately 85 per cent of the population are included in the lower and middle income groups. Extension of the free Health Service to include all sections of the population is under consideration. Social welfare expenditure for 1976 was estimated at £246 million.

Education

Education in Ireland is compulsory from the age of 6 to 15. Most children attend a National School of their own religious denomination until the age of 12, although religious instruction is optional. There are a few private primary schools in urban areas.

Post-primary education takes place in four sorts of school. *Secondary Schools* are private institutions run by boards of governors or religious communities but are almost universally subsidized and overseen by the Department of Education. Pupils take the *Intermediate Certificate* at 15 or 16 after a balanced, general curriculum and then specialize in five recognized subjects in which they sit the *Leaving Certificate* at 17 or 18.

Vocational Schools provide primary school leavers with a general and practical training for employment, as well as providing more specialized courses in technical training. In each county these schools come under the management of a Vocational Education Committee elected by the local authority. Two-thirds of the cost is borne by the Department of Education and the balance by the local authority.

Comprehensive Schools are State-financed and offer a balanced academic and technical curriculum of compulsory and optional subjects, and may lead to the *Intermediate Certificate*. After this some pupils continue at a technical school, which may be part of the same school or a separate college. *Community Schools* are a more recent innovation. They are State-financed, offer curricula similar to the comprehensive schools and were intended to replace existing vocational and secondary schools in rural areas but are also being established in new city areas.

Regional technical colleges exist at Athlone, Carlow, Cork, Dundalk, Galway, Limerick, Sligo and Waterford. They provide senior, post-primary apprenticeship, technical, professional and other courses.

The gaining of certain prescribed successes in the *Leaving Certificate* examination qualifies for entrance to the two universities, which are both self-governing, though they receive annual state grants. The National Institute for Higher Education, at Limerick, runs degree courses of a largely technological nature, although the humanities are represented. The Department of Education provides university and other higher education grants to students.

The total education budget for 1976 was over £220 million.

Tourism

Intensive marketing campaigns have been undertaken in recent years to develop new markets for Irish tourism. The country has numerous beauty spots, notably the Killarney Lakes and the West Coast.

Nationals of the following countries do not require a visa: Argentina, Australia and its dependencies, Austria, the Bahamas, Bangladesh, Barbados, Belgium, Bolivia, Botswana, Brazil, Canada, Chile, Colombia, Costa Rica, Denmark, Dominica, Ecuador, El Salvador, Fiji, Finland, France, the Gambia, the Federal Republic of Germany, Ghana, Greece, Grenada, Guatemala, Guyana, Honduras, Iceland, India, Italy, Jamaica, Japan, Kenya, Liechten-

THE CONSTITUTION

The original Constitution of the Irish Free State came into operation on December 6th, 1922. Certain provisions which were regarded as contrary to national sentiments were gradually removed by successive amendments, with the result that by 1937 the text differed considerably from that of the original document. It was superseded by an entirely new Constitution, which was approved by Parliament on June 14th, 1937, and enacted by the people by means of a plebiscite on July 1st. This new Constitution came into operation on December 29th, 1937.

TITLE OF THE STATE

The title of the State is *Éire* or, in the English language, Ireland.

NATIONAL STATUS

The Constitution declares that Ireland is a sovereign, independent, democratic State. It affirms the inalienable, indefeasible and sovereign right of the Irish nation to choose its own form of government, to determine its relations with other nations, and to develop its life, political, economic and cultural, in accordance with its own genius and traditions.

The Constitution applies to the whole of Ireland, but, pending the re-integration of the national territory, the laws enacted by the Parliament established by the Constitution have the same area and extent of application as those of the Irish Free State.

THE PRESIDENT

At the head of the State is the President, elected by direct suffrage, who holds office for a period of seven years. He, on the advice of the Government or its head, summons and dissolves Parliament, signs and promulgates laws and appoints judges; on the nomination of the *Dáil* he appoints the Prime Minister and, on the nomination of the Prime Minister with the previous approval of the *Dáil*, he appoints the other members of the Government. The supreme command of the Defence Forces is vested in him, its exercise being regulated by law.

In addition, the President has power to refer certain Bills to the Supreme Court for decision on the question of their constitutionality; and also, at the instance of a prescribed proportion of the members of both Houses of Parliament to refer certain Bills to the people for decision at a referendum.

The President, in the exercise and performance of certain of his Constitutional powers and functions, has the aid and advice of a Council of State.

PARLIAMENT

The *Oireachtas*, or National Parliament, consists of the President and two Houses, viz. a House of Representatives, called *Dáil Éireann*, and a Senate, called *Seanad Éireann*. The *Dáil* consists of 148 members, who are elected for a five-year term by adult suffrage on the system of proportional representation by means of the single, transferable vote. Of the sixty members of the Senate, eleven are nominated by the Prime Minister, six are elected by the universities, and forty-three are elected from five panels of candidates established on a vocational basis, repre-

sented: (1) National Language and Culture, Literature, Art, Education, and such professional interests as may be defined by law for the purpose of this panel; (2) Agriculture and allied interests, and Fisheries; (3) Labour, whether organized or unorganized; (4) Industry and Commerce, including banking, finance, accountancy, engineering and architecture; (5) Public Administration and social services, including voluntary social activities.

A maximum period of ninety days is afforded to the Senate for the consideration or amendment of Bills sent to that House by the *Dáil*, but the Senate has no power to veto legislation.

EXECUTIVE

The Executive Power of the State is exercised by the Government, which is responsible to the *Dáil* and consists of not fewer than seven and not more than fifteen members. The head of the Government is the Prime Minister.

FUNDAMENTAL RIGHTS

The State recognizes the family as the natural, primary and fundamental unit group of Society, possessing inalienable and imprescriptible rights antecedent and superior to all positive law. It acknowledges the right and duty of parents to provide for the education of their children, and, with due regard to that right, undertakes to provide free education. It pledges itself also to guard with special care the institution of marriage.

The Constitution contains special provision for the recognition and protection of the fundamental rights of citizens, such as personal liberty, free expression of opinion, peaceable assembly, and the formation of associations and unions.

Freedom of conscience and the free practice and profession of religion are, subject to public order and morality, guaranteed to every citizen. No religion may be endowed or subjected to discriminatory disability. Since December, 1972, when a referendum was taken on the issue, the Catholic Church is no longer granted a special, privileged position.

SOCIAL POLICY

Certain principles of social policy intended for the general guidance of Parliament, but not cognizable by the courts, are set forth in the Constitution. Among their objects are the direction of the policy of the State towards securing the distribution of property so as to subserve the common good, the regulation of credit so as to serve the welfare of the people as a whole, the establishment of families in economic security on the land, and the right to an adequate means of livelihood for all citizens.

The State pledges itself to safeguard the interests, and to contribute where necessary to the support, of the infirm, the widow, the orphan and the aged, and shall endeavour to ensure that citizens shall not be forced by economic necessity to enter occupations unsuited to their sex, age or strength.

AMENDMENT OF THE CONSTITUTION

No amendment to the Constitution can be effected except by the decision of the people given at a referendum.

JUDICIAL SYSTEM

Justice is administered in public by Judges appointed by the President on the advice of the Government. The Judges of all Courts are completely independent in the exercise of their judicial functions. The jurisdiction and organization of the Courts are dealt with in the Courts (Establishment and Constitution) Act, 1961, and the Courts (Supplemental Provisions) Acts, 1961 to 1973.

THE SUPREME COURT

The Supreme Court, consisting of the Chief Justice and five other Judges, has appellate jurisdiction from all decisions of the High Court. The President of Ireland may, after consultation with the Council of State, refer a Bill which has been passed by both Houses of the Oireachtas (other than a Money Bill or certain others), to the Supreme Court to establish whether it or any provisions thereof is or are repugnant to the Constitution.

THE COURT OF CRIMINAL APPEAL

The Court of Criminal Appeal, consisting of the Chief Justice or an ordinary Judge of the Supreme Court and two Judges of the High Court, deals with appeals by persons convicted on indictment, where leave to appeal has been granted. The decision of this Court is final unless the Court or the Attorney-General certifies that a point of law involved should, in the public interest, be taken to the Supreme Court.

THE HIGH COURT

The High Court, consisting of the President of the High Court and nine other Judges, has full original jurisdiction in, and power to determine, all matters and questions whether of law or fact, civil or criminal. The High Court on circuit acts as an appeal court from the Circuit Court. The Central Criminal Court sits as directed by the President of the High Court to try criminal cases outside the jurisdiction of the Circuit Court. The duty of acting as the Central Criminal Court is assigned, for the time being, to a Judge of the High Court.

CIRCUIT AND DISTRICT COURTS

The civil jurisdiction of the Circuit Court is limited to £2,000 in contract and tort and in actions founded on

hire-purchase and credit-sale agreements and to £5,000 in equity, and in probate and administration, but where the parties consent the jurisdiction is unlimited. In criminal matters the Court has jurisdiction in all cases except murder, treason, piracy and allied offences. One Circuit Judge is permanently assigned to each circuit outside Dublin and four to the Dublin circuit. The Circuit Court acts as an appeal court from the District Court, which has a summary jurisdiction in a large number of criminal cases where the offence is not of a serious nature. In civil matters the District Court has jurisdiction in contract and tort (except slander, libel, criminal conversation, seduction, slander of title, malicious prosecution and false imprisonment) where the claim does not exceed £250 and in actions founded on hire-purchase and credit-sale agreements.

All criminal cases except those dealt with summarily by a Justice in the District Court are tried by a Judge and a Jury of twelve. Juries are also used in very many civil cases in the High Court. In a criminal case the jury must be unanimous in reaching a verdict but in a civil case the agreement of nine members is sufficient.

RELIGION

The organization of the churches takes no account of the partition of Ireland into two separate political entities. Thus the Catholic Primate of All Ireland and the Protestant Episcopal Primate of All Ireland now have their seat in Northern Ireland at Armagh, and the headquarters of the Presbyterian Church in Ireland is at Belfast.

People professing religious beliefs in the Republic were divided as follows, according to the 1961 census:

Catholic	2,673,473
Church of Ireland	104,016
Presbyterian	18,953
Methodist	6,676
Other	15,223

TOTAL 2,818,341

THE PRESS

The Constitution of Ireland provides for the recognition and protection of the fundamental rights of the citizen, including free expression of opinion. Despite the powerful position of the Roman Catholic Church in Ireland there is open discussion on controversial issues. The right of a journalist's professional secrecy is not recognized by the Irish Courts.

Ireland has seven daily newspapers, five in Dublin and two in Cork, including four morning papers which are distributed nationally. There are three national Sunday papers.

ITALY

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Italian Republic comprises a peninsula, extending from southern Europe into the Mediterranean Sea, and a number of adjacent islands. The two principal islands are Sicily to the south-west and Sardinia to the west. The Alps form a natural boundary to the north where the bordering countries are France to the north-west, Switzerland and Austria to the north and Yugoslavia to the north-east. The climate is Mediterranean. The principal language is Italian. German is spoken in the Alto Adige region on the Austrian border, and in the Basilicata region of eastern Italy there is an Albanian-speaking minority. Roman Catholicism is the state religion. The national flag (proportions 3 by 2) has three vertical bands of green, white and red. The capital is Rome.

Recent History

In June 1946, as the result of a plebiscite, the monarchy was abolished and Italy became a republic. There have been 39 governments since 1946, all dominated by the Christian Democrats. The major opposition group is the Communist Party, which was excluded from participation in government from 1947 to 1977. Until 1963 the Christian Democrats' hold on power was firm. Industry expanded rapidly in a liberal economic system supported by United States capital. Low wage-rates and lack of social reforms, however, created discontent and in 1963 the Right and Left made electoral gains at the expense of the Christian Democrats. Since then there has been a rapid succession of mainly coalition governments. Until 1970 no significant reforms were achieved, while strikes and labour unrest grew, supported by student agitation. In July 1970 Emilio Colombo revived a Centre-Left coalition which passed two controversial measures, the Divorce Bill and the Finance Bill. However, it could not halt the deterioration of the economy and resigned in January 1972.

Elections in May failed to resolve the political deadlock. A Centre-Right government under Giulio Andreotti was succeeded in July 1973 by a Centre-Left coalition of Christian Democrats, Republicans, Socialists and Social Democrats, headed by Mariano Rumor. The Communists and the trade unions adopted a tolerant attitude to the new government in its strenuous efforts to cope with the economic crisis. In February 1974, the Republicans withdrew from the government over economic policy. A new Rumor administration was formed in March, excluding the Republicans but dependent upon their parliamentary support. As a political manoeuvre, the right wing of the Christian Democrats forced the Government to hold a referendum on the Divorce Law in May 1974. There was a large majority in favour of the law, a severe set-back for the Christian Democrats. In October, after a prolonged cabinet crisis, the Rumor administration resigned. Italy was without a government until the end of November when Aldo Moro formed a coalition of Christian Democrats and Republicans. The new government was extremely weak, depending on the parliamentary support of parties outside the coalition. It was accepted only in the absence of any viable alternative.

The failure of successive governments to cope with the decline of the economy and public services, corruption in high places and the growth of lawlessness provoked discontent with the political parties which had held power for so long. In the regional elections of June 1975 the Communists attracted 33 per cent of the votes, and although the Christian Democrats still led the poll with 35 per cent, their complete domination of political life was clearly at an end. Amintore Fanfani, the secretary-general of the Christian Democrats, a virulent opponent of any deal with the Communists, was voted out of office and replaced by a temporary incumbent, Benigno Zaccagnini. The Communists, rather than envisaging the possible formation of a left-wing coalition government, continued to press for the "historic compromise", a programme for Italy's future based on an alliance between Communism and Catholicism.

In January 1976 Aldo Moro's coalition government resigned after the withdrawal of support by the Socialists. In a last effort to avoid a general election, which was regarded as futile by the major parties, Moro formed a minority Christian Democrat administration in February. However, lacking adequate support in parliament, the Government was forced to hold an election in June. The Communists greatly increased their share of the vote, receiving over 34 per cent as against 27 per cent in 1972. More surprisingly, the Christian Democrats maintained their 38 per cent share by taking votes from the extreme right and the smaller centre parties. Although the Christian Democrats still rejected the "historic compromise" and insisted on excluding the Communists from power, they could no longer govern against their opposition in parliament. At the end of July, Giulio Andreotti formed a government of Christian Democrats assured of the abstention of the Communist deputies. The new government proceeded to introduce severe austerity measures to cope with the continuing economic crisis.

In July 1977, after four months of negotiations, the Communists at last received a measure of participation in government with the conclusion of the "programmatic accord", which allowed the opposition parties a significant voice in policy-making but no direct role in government. The initial programme included measures to strengthen the economy and uphold law and order. Communist support for the Christian Democrats alienated the extreme left, some of whom resorted to the forms of political violence already associated with the extreme right. Nevertheless, the arrangement enhanced the authority of the Government, which no longer feared defeat in parliament, and suited both major parties, neither of which relished the prospect of an early general election. In October local elections scheduled for the following month were postponed, possibly until 1980.

Government

Under the 1948 Constitution, legislative power is held by the bicameral Parliament, elected by universal adult suffrage for five years (subject to dissolution), using

proportional representation. The Senate has 315 elected members (seats allocated on a regional basis) and seven life Senators. The Chamber of Deputies has 630 members.

The President of the Republic is a constitutional Head of State elected for seven years by an electoral college comprising both Houses of Parliament and 58 regional representatives. Executive power is exercised by the Council of Ministers. The Head of State appoints the President of the Council (Prime Minister) and, on the latter's recommendation, other Ministers. The Council is responsible to Parliament.

The country is divided into twenty regions, five of which (Sicily, Sardinia, Trentino-Alto Adige, Friuli-Venezia Giulia and Val d'Aosta) enjoy a special status. There is a large degree of regional autonomy. Each region has a regional council elected every five years by universal suffrage and a *Giunta regionale* responsible to the regional council. The regional council is a legislative assembly, while the *Giunta* holds executive power.

Defence

Italy, a NATO member, maintains an army of 218,000, a navy of 42,000 and an air force of 70,000. Military service lasts 12 months in the army and air force and 18 months in the navy. The 1977 defence budget totalled 4,117,000 million lire.

Economic Affairs

Although agriculture continues to represent an important part of the Italian economy, a substantial advance has taken place since the end of the war in the proportion of the gross national product contributed by the industrial sector, particularly engineering and other manufacturing industries. By 1972 less than 10 per cent of the G.N.P. was provided by agriculture, as against 40 per cent from industry. State-owned industries account for approximately half the total national industrial investment. Successive plans have been enacted in recent years to modernize the agricultural sector but, although production has doubled in ten years, consumption has trebled. The chief crops are rice, wheat, maize, grapes and olives. Tourism is also an important source of income; foreign visitors spent 2,600,000 million lire in Italy in 1976.

Italy's long-term economic problem remains that of the integration of Southern Italy with the more industrially-developed North. The income per capita of the Southern population is just over half that of the country as a whole, while employment and production lag far behind. The Cassa per il Mezzogiorno was set up in 1950 to increase investment in the south, which has also benefited from the EEC Regional Fund.

Over five million Italians live abroad and their remittances form a valuable source of income.

Since about 1969 Italy has been faced with severe inflation and economic stagnation, problems exacerbated by the massive rise in oil prices in late 1973 and early 1974. Italy is heavily dependent on imported energy and the trade deficit for the first half of 1974 was almost treble that of a year earlier. Austerity measures, including a temporary import levy on a wide range of products, heavy tax increases and credit restrictions, began to take effect in 1975. Both the trade deficit and the rate of inflation were reduced, but at the cost of a severe recession in

industry and consequent rise in unemployment to 1,200,000. Reflationary measures were introduced in August 1975 and the import levy dropped, but in early 1976 continuing economic difficulties and political uncertainties caused a run on the lira, which by May had fallen by about 25 per cent against the U.S. dollar. It again began to fall in the autumn and the Government set out to cut public spending and reduce imports by an austerity programme, including another import levy, further credit restrictions, selected tax increases and price rises for petrol and most essential public services. Nevertheless, the economy did show a remarkable upturn in 1976: G.D.P. rose by 5.6 per cent (compared with a fall of 3.7 per cent in 1975); the trade deficit was reduced, partly by a rise in the value of exports of 12.6 per cent; and industrial production rose by 12 per cent.

In April 1977, after 15 months of negotiations, Italy obtained a loan of U.S. \$530 million from the IMF in return for pledges to reduce public spending and limit the inflation rate to 13 per cent by March 1978. The import deposit scheme was again withdrawn and the lira was traded without support from the Banca d'Italia. By the end of September, the reserves of foreign exchange were at a record level and the balance of payments deficit and inflation continued to fall, but there was no reduction in the level of unemployment. There are hopes for a 2 per cent growth-rate in 1978.

The high level of public expenditure (which increased by 42 per cent in 1974 and 48 per cent in 1975/76) continues to fuel inflation and in October 1977, under pressure from the trades unions and its own party, the Government agreed to rescind 1,600,000 million lire of spending cuts agreed with the IMF. Indexation of wages with price increases, although modified in 1977, is another inflationary factor. The heavy debts of both public and private sectors of industry are a further constraint on growth, and domestic credit is difficult to obtain. The decline of the state sector, due partly to its use as a source of patronage by the Christian Democrats, led in 1977 to the dismantling of the state mining company, EGAM, and a parliamentary enquiry into two other state enterprises, IRI and ENI, which lost 5,672,000 million lire in 1975.

Both trade unions and management have on the whole supported the Government's efforts to cope with the crisis, but there is a broad consensus that without fundamental structural changes the economy cannot recover its vitality.

Transport and Communications

There are 16,014 km. of railways, nearly half of them electrified. In 1975 there were 291,083 km. of road in Italy, including 44,234 km. of major roads and about 100,000 km. of secondary roads. There were 5,513 km. of motorway in 1976. The completed network of motorways will total 6,146 km. Alitalia, the Italian airline, operates internally and throughout the world and there are four other airlines with scheduled services. In 1976 the merchant fleet had a displacement of over 11 million gross tons and was the world's ninth largest.

Social Welfare

The *Istituto Nazionale della Previdenza Sociale (INPS)* administers old-age pensions and unemployment benefits to employees in the private sector and to farmers and craftsmen. In 1976 INPS provided 49 million old-age

pensions (paid to employees who have been insured for at least 15 years), 5.1 million disability pensions (which may be drawn by employees after 5 years) and 2 million pensions to the survivors of pensioners. Unemployment benefits are paid for a maximum period of six months to workers who are unemployed because of slack periods and who have paid compulsory contributions for at least one year. The INPS also administers disability benefits and an insurance scheme against tuberculosis for workers and families. These benefits are financed by contributions from workers and employers, who pay half each, and by a state subsidy.

INPS administers family allowances which are paid to all employed persons for wife, children and any other dependants. These allowances, which are paid to about 7 million workers and vary in amount according to type of employment, are paid by the employer, who then recouperates the amount on the contributions which he pays to the INPS.

Medical insurance for most employed persons in the private sector and for certain self-employed persons is administered by the *Istituto Nazionale per l'Assicurazione contro le Malattie* (INAM). Payment for medical treatment and prescriptions is normally made directly by the patient who then obtains total or partial reimbursement. Industrial injuries benefits are paid by the *Istituto Nazionale per l'Assicurazione contro gli Infortuni sul Lavoro* (INAIL). The *Opera Nazionale per la Protezione della Maternità e dell'Infanzia* (ONMI) provides every child from birth to 6 years with free welfare and medical care at special clinics.

State employees and their families contribute to a compulsory insurance scheme covering medical treatment, prescriptions and maternity benefits as well as loans and scholarships, administered by the *Ente Nazionale di Previdenza ed Assistenza per i Dipendenti dello Stato* (ENPAS). About 2 million employees are insured under the scheme. The *Ente Nazionale di Previdenza per i Dipendenti da Enti di Diritto Pubblico* (ENPDEP) administers a similar scheme for employees of public bodies, such as the Institute for Industrial Reconstruction.

From July 1st, 1977, the state agencies were due to be replaced by services operated on a local level by the 20 regional governments, although these were unlikely to be ready for several months. They will be based on local health units, including preventive and rehabilitative medicine.

Education

Education is compulsory and free between the ages of 6 and 14. Books, equipment and meals are provided for a large number of needy pupils. There is a shortage of classrooms and many schools operate on double shifts. The curricula of all Italian schools are standardized by the Ministry of Education. There are 28,978 private and state nursery schools (*scuole materne*) with places for almost 1,800,000 children. After primary school, which is from 6 to 11 years, the pupil enters the lower secondary school (*scuola media unificata*). An examination at the end of three years leads to a lower secondary school certificate, which gives access to all higher secondary schools. Pupils wishing to enter a classical lycée (*liceo classico*) must also pass in Latin.

Higher secondary education is provided by Classical,

Artistic and Scientific Lycées, Training Schools for Elementary Teachers and Technical and Vocational Institutes (industrial, commercial, nautical, etc.). After five years at a lycée the student sits an examination for the higher secondary school certificate (*maturità*), which qualifies him for automatic entry into any university faculty, except the Faculty of Humanities, which requires the *maturità classica* from the Classical Lycée. Special four-year courses are provided at the Teachers' Training Schools and the diploma obtained permits entry to a special university faculty of education, the *magistero*, and a few other faculties. The *istituti tecnici* provide practical courses which prepare students for a specialized university faculty.

University courses last for a minimum of four years. Examinations, which are mainly oral, are held three times a year. There are 288 establishments of higher education. In 1976/77 there were 959,300 students enrolled in higher education in Italy. Study allowances are awarded to students according to their means and merit.

Tourism

With Alpine and Mediterranean scenery, a sunny climate, Roman buildings, Renaissance towns and palaces, paintings and sculpture and famous opera houses, Italy attracts great numbers of tourists. During 1976 over 36 million foreign visitors went to Italy. There are about four million tourist beds.

Visas are not required for nationals of the following countries: Algeria, Argentina, Australia, Austria, Barbados, Belgium, Benin, Bolivia, Botswana, Brazil, Canada, Chile, Colombia, Cyprus, Denmark, the Dominican Republic, Ecuador, Finland, France, the Gambia, the Federal Republic of Germany, Greece, Guyana, Iceland, Iran, Ireland, Jamaica, Japan, Kenya, Kuwait, Lesotho, Luxembourg, Malaysia, Malta, Mexico, Monaco, Morocco, the Netherlands, New Zealand, Norway, Peru, Portugal, Singapore, Spain, Sri Lanka, Sweden, Switzerland, Tanzania, Tunisia, Turkey, Uganda, the United Kingdom, the U.S.A., Uruguay, Yugoslavia.

Sport

Football is the most popular sport. Volleyball, handball, cycling and motor racing are also important.

Public Holidays

1978: March 27th (Easter Monday), April 25th (Liberation Day), May 1st (Labour Day), August 15th (Assumption), November 1st (All Saints' Day), December 8th (The Immaculate Conception), December 25th (Christmas Day), December 26th (St. Stephen).

1979: January 1st (New Year's Day).

FINANCE

100 centesimi = 1 Italian lira.

Coins: 1, 2, 5, 10, 20, 50, 100, 500 and 1,000 lire.

Notes: 500, 1,000, 2,000, 5,000, 10,000, 20,000, 50,000 and 100,000 lire.

Commercial exchange rates (October 1977): £1 sterling = 1,561.5 lire; U.S. \$1 = 879.8 lire.

10,000 lire = £6.40 = \$11.37.

Note: Before August 1971 the exchange rate was U.S. \$1 = 625.00 lire (1 lira = 0.16 U.S. cent). From December 1971 to February 1973 the rate was \$1 = 581.50 lire. In terms of sterling, the exchange rate was £1 = 1,500.00 lire from November 1967 to August 1971; and £1 = 1,515.22 lire from December 1971 to June 1972. Since February 1973 the lira has been allowed to "float". The average exchange rate (lire per U.S. dollar) was: 583.00 in 1973; 650.34 in 1974; 652.85 in 1975; 832.29 in 1976.

* Data refer to the trade of Italy (excluding the communes of Livigno and Campione) and San Marino, with which Italy maintains a custom union. The figures include trade in second-hand ships, and stores and bunkers for foreign ships and aircraft, but exclude trade in gold, manufactured gas, electric energy (before 1975), surplus military equipment, war reparations and repayments, and gift parcels sent by post. Also excluded are imports of military goods and exports of fish landed abroad directly from Italian vessels. Figures from 1974 include gold ingots for non-monetary uses.

THE CONSTITUTION

The Constitution of the Italian Republic was approved by the Constituent Assembly on December 22nd, 1947, and came into force on January 1st, 1948. The fundamental principles are set out in Articles 1-12 as follows:

Italy is a democratic republic based on the labour of the people.

The Republic recognizes and guarantees as inviolable the rights of man, either as an individual or in a community, and it expects in return devotion to duty and the fulfilment of political, economic and social obligations.

All citizens shall enjoy equal status and shall be regarded as equal before the law, without distinction of sex, race, language or religion, and without regard to the political opinions which they may hold or their personal or social standing.

It shall be the function of the Republic to remove the economic and social inequalities which, by restricting the liberty of the individual, impede the full development of the human personality, thereby reducing the effective participation of the citizen in the political, economic and social life of the country.

The Republic recognizes the right of all citizens to work and shall do all in its power to give effect to this right.

The Republic, while remaining one and indivisible, shall recognize and promote local autonomy, fostering the greatest possible decentralization in those services which are administered by the State, and subordinating legislative methods and principles to the exigencies of decentralized and autonomous areas.

The State and the Catholic Church shall be sovereign and independent, each in its own sphere. Their relations shall be governed by the Lateran Pact ("Patti Lateranensi"), and any modification in the pact agreed upon by both parties shall not necessitate any revision of the Constitution.

All religious denominations shall have equal liberty before the law, denominations other than the Catholic having the right to worship according to their beliefs, in

so far as they do not conflict with the common law of the country.

The Republic shall do all in its power to promote the development of culture and scientific and technical research. It shall also protect and preserve the countryside and the historical and artistic monuments which are the inheritance of the nation.

The juridical system of the Italian Republic shall be in conformity with the generally recognized practice of international law. The legal rights of foreigners in the country shall be regulated by law in accordance with international practice.

Any citizen of a foreign country who is deprived of democratic liberty such as is guaranteed under the Italian Constitution, has the right of asylum within the territory of the Republic in accordance with the terms of the law, and his extradition for political offences will not be granted.

Italy repudiates war as an instrument of offence against the liberty of other nations and as a means of resolving international disputes. Italy accepts, under parity with other nations, the limitations of sovereignty necessary for the preservation of peace and justice between nations. To that end she will support and promote international organizations.

The Constitution is further divided into Parts I and II, in which are set forth respectively the rights and responsibilities of the citizen and the administration of the Republic.

PART I

SECTION I—Civic Clauses (Articles 13-28)

The liberty of the individual is inviolable and no form of detention, restriction or inspection is permitted unless it be for juridical purposes and in accordance with the provisions of the law. The domicile of a person is likewise inviolable and shall be immune from forced inspection or sequestration, except according to the provisions of the law. Furthermore, all citizens shall be free to move wheresoever they will throughout the country, and may

leave it and return to it without let or hindrance. Right of public meeting, if peaceful and without arms, is guaranteed. Secret organizations of a directly or indirectly political or military nature are, however, prohibited.

Freedom in the practice of religious faith is guaranteed.

The Constitution further guarantees complete freedom of thought, speech and writing, and lays down that the Press shall be entirely free from all control or censorship. No person may be deprived of civic or legal rights on political grounds.

The death penalty is not allowed under the Constitution except in case of martial law. The accused shall be considered "not guilty" until he is otherwise proven. All punishment shall be consistent with humanitarian practice and shall be directed towards the re-education of the criminal.

SECTION II—Ethical and Social Clauses (Articles 29-34)

The Republic regards the family as the fundamental basis of society and considers the parents to be responsible for the maintenance, instruction and education of the children. The Republic shall provide economic assistance for the family, with special regard to large families, and shall make provision for maternity, infancy and youth, subject always to the liberty and freedom of choice of the individuals as envisaged under the law.

Education, the arts and science shall be free, the function of the State being merely to indicate the general lines of instruction. Private entities and individuals shall have the right to conduct educational institutions without assistance from the State, but such non-State institutions must ensure to their pupils liberty and instruction equal to that in the State schools. Instructions of higher culture, universities and academies shall be autonomous within the limitations prescribed by the law.

Education is available to all and is free and obligatory for at least eight years. Higher education for students of proven merit shall be aided by scholarships and other allowances made by the Republic.

SECTION III—Economic Clauses (Articles 35-47)

The Republic shall safeguard the right to work in all its aspects, and shall promote agreement and co-operation with international organizations in matters pertaining to the regulation of labour and the rights of workers. The rights of Italian workers abroad shall be protected.

The worker shall be entitled to remuneration proportionate to the quantity and quality of his work, and in any case shall be ensured of sufficient to provide freedom and a dignified standard of life for himself and his family.

The maximum working hours shall be fixed by law, and the worker shall be entitled to a weekly day of rest and an annual holiday of nine days with pay.

Women shall have the same rights and, for equal work, the same remuneration as men. Conditions of work shall be regulated by their special family requirements and the needs of mother and child. The work of minors shall be specially protected.

All citizens have the right to sickness, unemployment and disability maintenance.

Liberty to organize in trade unions is guaranteed and any union may register as a legal entity, provided it is organized on a democratic basis. The right to strike is admitted within the limitations of the relevant legislation.

Private enterprise is permitted in so far as it does not run counter to the well-being of society nor constitute a danger to security, freedom and human dignity.

Ownership of private property is permitted and guaranteed within the limitations laid down by the law regarding

the acquisition, extent and enjoyment of private property. Inheritance and testamentary bequests shall be regulated by law.

Limitation is placed by law on private ownership of land and on its use, with a view to its best exploitation for the benefit of the community.

The Republic recognizes the value of mutual co-operation and the right of the workers to participate in management.

The Republic shall encourage all forms of saving, by house purchase, by co-operative ownership and by investment in the public utility undertakings of the country.

SECTION IV—Political Clauses (Articles 48-54)

The electorate comprises all citizens, both men and women, who have attained their majority. Voting is free, equal and secret, and its exercise is a civic duty. All citizens have the right to associate freely together in political parties, and may also petition the Chambers to legislate as may be deemed necessary.

All citizens of both sexes may hold public office on equal terms.

Defence of his country is a sacred duty of the citizen, and military service is obligatory within the limits prescribed by law. Its fulfilment shall in no way prejudice the position of the worker nor hinder the exercise of his political rights. The organization of the armed forces shall be imbued with the spirit of democracy.

All citizens must contribute to the public expenditure, each in proportion to his capacity.

All citizens must be loyal to the Republic and observe the terms of the law and the Constitution.

PART II

SECTIONS I, II AND III (articles 55-100)

These sections are devoted to a detailed exposition of the Legislature and legislative procedure of the Republic.

Parliament shall comprise two Chambers, namely the Chamber of Deputies and the Senate of the Republic.

The Chamber of Deputies is elected by direct universal suffrage, the number of Deputies being six hundred and thirty. All voters who on the day of the elections are twenty-five years of age, may be elected Deputies.

Seats are apportioned by dividing the number of inhabitants of the Republic, as shown in the last general census, by six hundred and thirty, and allocating the seats proportionally to the population of each constituency.

The Senate of the Republic is elected on regional basis, the number of eligible Senators being three hundred and fifteen. No Region shall have less than seven Senators. Val d'Aosta has only one Senator.

Seats are allocated proportionally among the Regions in the same way as the Chamber of Deputies.

The Chamber of Deputies and the Senate of the Republic are elected for five years.

The term of each House cannot be extended except by law and only in the case of war.

Members of Parliament shall receive remuneration fixed by law.

The President of the Republic must be a citizen of at least fifty years of age and in full enjoyment of all civic and political rights. He shall be elected for a period of seven years (Articles 84-85).

The Government shall consist of the President of the Council and the Ministers who themselves shall form the Council. The President of the Council, or Prime Minister, shall be nominated by the President of the Republic, who shall also appoint the Ministers on the recommendation of the Prime Minister (Article 92).

ITALY

SECTION IV (Articles 101-113) sets forth the judicial system and procedure.

SECTION V (Articles 114-133) deals with the division of the Republic into regions, provinces and communes, and sets forth the limits and extent of autonomy enjoyed by the regions. Under Article 131 the regions are enumerated as follows:

Piedmont	Marche
Lombardy	Lazio
Veneto	Abruzzi
Liguria	Molise
Emilia-Romagna	Campania
Tuscany	Puglia
Umbria	Basilicata

The Constitution, The Government

Calabria
Sicily
Sardinia

Trentino-Alto-Adige
Friuli-Venezia Giulia
Val d'Aosta

The last five-named regions shall have a wider form of autonomy based on constitutional legislation specially adapted to their regional characteristics (Article 116). Each region shall be administered by a Regional Council, in which is vested the legislative power and which may make suggestions for legislation to the Chambers, and the "Giunta regionale" which holds the executive power (Article 121).

The final articles provide for the establishment of the "Corte Costituzionale" to deal with constitutional questions and any revisions which may be found necessary after the Constitution has come into operation.

JUDICIAL SYSTEM

Corte Costituzionale: Palazzo Della Consulta, Piazza del Quirinale 41, Rome; consists of 15 judges, one third appointed by the President of the Republic, one third elected by Parliament in joint session, one third by the ordinary and administrative supreme courts; Pres. Prof. PAULO ROSSI; Sec.-Gen. Cons. Dott. ALDO MONACO.

Consiglio Superiore della Magistratura: Piazza della Indipendenza 6, Rome; Pres. the President of the Republic; Vice-Pres. Prof. GIACINTO BOSCO.

Consiglio di Stato: Palazzo Spada, Piazza Capo di Ferro 13, Rome; established in accordance with Article 10 of the Constitution; has both consultative and judicial functions; Pres. VINCENZO UCCELLATORE.

Corte dei Conti: Via Baiamonti 25, Rome, and Via Barberini 38, Rome; functions as the court of public auditors for the state; Pres. Dott. EUGENIO CAMPBELL.

Corte Suprema di Cassazione: Palazzo di Giustizia, Rome; supreme court of civil and criminal appeal; First Pres. Dott. MARIO STELLA-RICHTER; Vice-Pres. Dott. EMANUELE DANZI.

The Constitutional Court was established in 1956 and is an autonomous constitutional body, standing apart from the judicial system. Its most important function is to pro-

nounce on the constitutionality of legislation both subsequent and prior to the present Constitution of 1948. It also judges accusations brought against the President of the Republic or ministers.

At the base of the system of penal jurisdiction are the *Preture* (District Courts), where offences carrying a sentence of up to three years' imprisonment are tried. Above the *Preture* are the *Tribunali* (Tribunals) and the *Corti di Assise presso i Tribunali* (Assize Courts attached to the Tribunals), where graver offences are dealt with. From these courts appeal lies to the *Corti d'Appello* (Courts of Appeal) and the parallel *Corti di Assise d'Appello* (Assize Courts of Appeal). Final appeal may be made, on juridical grounds only, to the *Corte Suprema di Cassazione*.

Civil cases may be taken in the first instance to the *Giudici Conciliatori* (Justices of the Peace), *Preture* or *Tribunali*, according to the economic value of the case. Appeal from the *Giudici Conciliatori* lies to the *Preture*, from the *Preture* to the *Tribunali*, from the *Tribunali* to the *Corti d'Appello*, and finally, as in penal justice, to the *Corte Suprema di Cassazione* on juridical grounds only.

Special departments for cases concerning labour relations or young persons may be attached to civil courts. Cases concerned with the public service and its employees are tried by *Tribunali Amministrativi Regionali* and the *Consiglio di Stato*.

RELIGION

More than 90 per cent of the population of Italy profess the Roman Catholic faith.

Under the terms of the Lateran Pact, signed in 1929 between Mussolini and the Papal Secretary of State, Cardinal Gasparri, the Catholic Apostolic Roman Religion was recognized as the official religion of Italy, and instruction in the Roman Catholic doctrine became compulsory in Italian schools. The Holy See was accorded sovereign rights in the Vatican City, which was granted extraterritorial rights as an independent State. In November 1977 plans were announced for a new concordat whereby Roman Catholicism would no longer be the state religion.

ROMAN CATHOLIC CHURCH

Primate of Italy, Archbishop and Metropolitan of the Roman Province and Bishop of Rome: His Holiness Pope PAUL VI.

THE PRESS

In view of Italy's population the number of daily newspapers at 86 is rather small, with the bulk of them (46, of which 10 in Milan) appearing in the industrial north, 26 in central Italy (including 23 in Rome), seven in the south and the remainder on the islands. Between 1944 and 1967 no less than 161 newspapers ceased publication. The total daily circulation in 1972 was 7.3 million, about 13 per 100 people, but the northern third of the population takes two-thirds of this circulation.

Rome and Milan are the only real press centres. Only two dailies manage to sustain a national circulation, *Corriere della Sera* and *Il Giorno*, both in Milan, followed by Turin's *La Stampa* circulating in the north and centre. Otherwise the large dailies circulate in and reflect their own region; e.g. *La Nazione* serves Florence and its region, *Il Tempo* Rome and the centre, Genoa's *Il Secolo XIX* extends throughout the Italian Riviera, *Il Mattino* serves the Naples region and *L'Ora* Palermo. Such papers make up for a general lack of smaller dailies; there are, however, many weekly papers.

The daily press has experienced economic difficulties for many years, but since 1973 rises in labour costs and the price of raw materials have created a critical situation. The dailies have become entirely dependent on financial support from large industrial companies, political parties or other social groups with substantial capital who are prepared to stand a financial loss in return for a measure of control over an important information medium. The most influential firm is the Montedison chemical company which in 1974 gained control of the *Corriere della Sera*, Italy's leading daily newspaper. Montedison also has effective financial control of such important dailies as *Il Messaggero*, *La Notte* and *Il Giornale*, the Milan paper. Fiat or other Agnelli concerns control *La Stampa*, *Stampa Sera*, *Corriere dello Sport* and a number of magazines and regional newspapers. Other important papers backed by industry include *Il Resto di Carlino* and *La Nazione*, associated with Eridiana, *Il Giorno* owned by ENI, and *Il Sole/24 Ore* controlled by Confindustria. Financial institutions also have interests in the press. The Banco di Napoli, for example, has a large holding in *La Gazzetta del Mezzogiorno* and *Il Mattino*.

All the political parties represented in parliament have a daily or weekly paper as party organ. The most important are the Communist *Unità* and the Socialist *Avanti!* In addition political parties own or have a holding in papers which are not run as party organs. The Christian Democrats, for example, control seven provincial dailies. Catholic organizations have a controlling interest in several papers and *Avvenire* is owned totally by the Church.

The most important dailies in terms of circulation are: Milan's *Corriere della Sera* (600,000), Turin's *La Stampa* (404,000), *L'Unità* (Milan edition 450,000; Rome edition 150,000), Rome's *Il Tempo* (243,500), and *Il Messaggero* (264,500), Milan's *Il Giorno* (287,000), Florence's *La Nazione* (236,000), Bologna's *Il Resto del Carlino* (257,000) and Rome's *Paese Sera* (200,000). The three dailies accorded most prestige for the standard of their articles and news coverage are the nationally circulating *Corriere della Sera*, *La Stampa* and *Il Giorno*, although the latter includes light features and cartoons. The most serious Rome daily is *Il Tempo*. The leading financial paper is Milan's *Il Sole/24 Ore* closely followed by *Il Globo* in Rome.

There are some 430 non-daily newspapers and over 4,000

periodicals. The illustrated weekly papers and magazines frequently have higher sales than the average daily. Ten of the largest appear in Milan, five in Rome and one in Turin. Many tend towards sensationalism, particularly the popular *Domenica del Corriere*, which has a circulation of almost one million, and the right wing *Oggi* and *Gente*. Other weekly illustrated periodicals with a large circulation include *Tempo*, *Epoca*, and *Europeo*. Among the serious and influential magazines should be mentioned *Panorama*, *Il Borghese*, the financial *Mondo Economico*, the small circulating political and cultural *Il Ponte*, the Socialist *L'Espresso* and the Communist *Rinascita*.

RADIO AND TELEVISION

Broadcasting in Italy is a state monopoly. Since 1974, however, restrictions on local private cable-television services and relaying foreign television programmes have been relaxed. In April 1975 a law was passed designed to guarantee the political independence of the RAI and the objectivity of its news coverage. Notably, the new law seeks to increase the autonomy of the two television channels and to reinforce parliamentary supervision of programme planning. Over 1,000 private local radio stations have begun broadcasting since a court case in 1975 established the right of every citizen to free local information.

Radiotelevisione Italiana (RAI-TV): 00195 Rome, Viale Mazzini 14; a joint stock company, responsible to the Ministry of Posts and Telegraphs, to which are ceded all radio and television rights; a permanent parliamentary commission of senators and deputies from all political groups formulates general guidelines for programmes and oversees the administration of RAI; an administrative council elected by the parliamentary commission itself elects the Director-General; Pres. Prof. BENIAMINO FINOCCHIARO; Vice-Pres. Prof. GIAN PIERO ORSELLO; Dir.-Gen. Dott. MICHELE PRINCIPE.

Transmitters (1974): 128 medium-wave, 10 short-wave, 1 long-wave and 1,889 frequency modulation transmitters.

In 1975 there were 12,817,545 radio receivers.

Programmes: National Programme (general), Second Programme (recreational), Third Programme (educational); there are also regional programmes in Italian and in the languages of ethnic minorities.

FOREIGN AND OVERSEAS SERVICE (Radio Roma)

Broadcasts in Albanian, Amharic, Arabic, Bulgarian, Czech, Danish, English, Esperanto, French, German, Greek, Hungarian, Italian, Lithuanian, Maltese, Polish, Portuguese, Romanian, Russian, Serbo-Croat, Slovak, Slovene, Somali, Spanish, Swedish, Turkish and Ukrainian; broadcasts to Africa, the Americas, Australia, Europe, Japan, the Near East and South Asia.

TELEVISION

Transmitters (1974): 1,234 transmitters.

In 1975 there were 12,102,654 television licences.

There are two television channels, the National Programme and the Second Programme. Between them they carry some 200 hours of advertising annually. There are local programmes in Italian and also in German for the Alto Adige.

Colour television is to be introduced using the PAL system.

CASSA PER IL MEZZOGIORNO
SOUTHERN ITALY DEVELOPMENT FUND

Piazzale Kennedy 20, Eur, Rome

President: AVV. ALBERTO SERVIDIO.

The Fund was set up in 1950 to develop the Southern areas of the country. Until June 1965 the disposable resources of the Fund were 2,500,000 million lire. The Fund was extended in June 1965 until 1980, with the task of implementing 5-year plans co-ordinated with the national economic plan. During the 1965-70 period, the Fund was endowed with 2,800,000 million lire. For the period 1971-75 a further appropriation of 8,350,000 million lire was authorized, and for the period 1976-80 14,337,000 million lire. The following are projects supervised by the Fund, completed by the end of 1976:

Land Reclamation and Irrigation: More than 8,860 km. of river channel control, embankments and drains have been completed. Over 1,100,000 hectares of land have been drained or protected from floods, and 15,677 km. of irrigation canals and networks laid, 7,439 km. of new agricultural roads constructed and 3,681 km. improved.

Aqueducts: The Fund has tackled the drinking water supply problem by laying 21,727 km. of mains and constructing 3,556 water towers with a capacity of about 2,979,370 cubic metres.

Transport and Communications: 3,833 km. of new trunk roads have been built and 16,448 km. improved; also the construction of 2,009 km. of motor highways is nearing completion. The tracks of numerous railway lines have been doubled. Port improvements have been approved with an expenditure of 203,223 million lire. Construction is nearing completion. For the improvement of the airport system in the south, projects totalling 54.7 billion lire have been approved. An inter-continental airport is being completed in Calabria.

Hospitals: More than 100 hospitals have been completed or are under construction with an approved expenditure of 369,371 million lire, in centres of the Southern Regions.

Industry: Numerous projects have been approved for setting up industrial estates in selected areas, the Fund's contributions towards this total being 901,912 million lire. In the private sector the Fund has operated a two-fold industrialization project: (a) credit is extended through three specialized institutes in the South (ISVEIMER for Southern Italy, IRFIS for Sicily, and CIS for Sardinia); 10,095 loans of 4,319,114 million lire were approved; also, loans for a total amount of 6,123,476 million lire have been granted by other industrial credit banks; (b) straight grants to enterprises of about 1,768,349 million lire. 123,715 grants valued at 56,939 million lire have been granted to the handicraft industries. Employment in southern manufacturing industries should increase to 1,070,000 workers by 1980.

Private Land Improvement: By the end of 1976 the Fund had completed the construction of: 15,177 km. of farm roads; 66,316 wells, tanks and reservoirs; 2,552 km. of transmission lines; 149 cheese factories; 564 olive oil mills; 710 wine factories. In addition, about 270,000 hectares have been prepared for farming and 331,000 hectares have been irrigated. A large portion of coastal population has been supported with 18,570 contributions totalling 77,055 million lire for the fishing industry.

Education: The Fund has completed 147 schools for industrial training and 21 agricultural schools with 120 branches have been opened. 1,456 kindergartens have been completed. 7,724 loans for school buildings to a value of 9,614 million lire have been granted.

Tourism: Projects to the value of 243,027 million lire have been approved. They include: local and sightseeing roads, archaeological excavations, modern museums, monument restorations, and improvements to grottoes and spas. The Fund has also financed 2,032 hotel-keeping enterprises for the construction of 110,246 rooms with 211,547 beds.

TRANSPORT

LIECHTENSTEIN

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Principality of Liechtenstein lies on the upper Rhine between Austria and Switzerland. The climate is mild. The official language is German, of which a dialect—Alemannish—is spoken. The population is predominantly Roman Catholic. The national flag (proportions five by three) consists of two equal horizontal stripes of royal blue and red, with a golden princely crown in the upper left-hand corner. The capital is Vaduz.

Recent History

Liechtenstein has been an independent state since 1719, except while under Napoleon's domination. Switzerland took over the diplomatic representation for the Principality from Austria in 1919. A Postal Union with Switzerland was agreed upon in 1921 and in 1923 a treaty was made with Switzerland whereby Liechtenstein was incorporated in the Swiss Customs Union. Franz Josef II succeeded as ruling prince in 1938. Liechtenstein has not joined the United Nations but became a party to the International Court of Justice in December 1949.

After 42 years as dominant party in the Government, the Progressive Citizens' Party was ousted by the Fatherland Union in the General Elections of February 1970, but it regained its majority four years later. However, the two parties have formed a coalition government since the Second World War and this arrangement has been continued. The voting age was lowered to 20 in 1969, but a proposal to give women the vote, though approved by Parliament, was rejected in referenda in 1971 and 1973. Prince Franz Josef signed a law in August 1976 which gave the communes the right to hold referenda to decide whether women should vote in a communal election. Such a referendum was held in Vaduz in September 1976, the proposal was approved and women voted for the first time in April 1977.

Government

The constitution of the hereditary Principality provides for a unicameral parliament (*Landtag*), composed of 15 members, 9 from the Upper Country and 6 from the Lower Country, elected (by men only) for four years, using proportional representation. A five-member Government is elected by the *Landtag* for its duration and confirmed by the Sovereign. Liechtenstein is united in a Customs Union with Switzerland, which also represents the principality abroad.

Defence

Although Liechtensteiners under the age of 60 are liable to military service in an emergency, there has been no standing army since 1868 and there is only a small police force of thirty-six men and twenty-nine auxiliaries.

Economic Affairs

Industry has developed well recently and is now a very important part of the economy, the metal industry being by far the most prominent sector, employing 5,096 workers

in 1976. The most important products are high frequency installations, boilers for central heating, hardware, small machinery, canned goods, furniture and upholstery, chemical and pharmaceutical goods, vacuum installations, optical and measuring instruments, toys, oil tanks, paints and varnishings and leather goods. Artificial teeth are made in Schaan and are now exported to about 100 countries. The pottery and ceramic industry in Nendeln is the oldest in the Principality and art pottery is also produced in Schaan. The textile industry, mainly cotton, is based in Triesen and Vaduz. The building and hotel trades are also highly developed. There is no unemployment in Liechtenstein. One-third of the population are resident foreigners, many of whom provide the labour for industry. In 1976 only 4 per cent of the labour force was employed in agriculture, which is of relatively little importance.

With a very limited home market, exports have risen at a high rate; in 1950 they amounted to only 15 million Swiss francs, in 1960 to 83 million, and by 1976 they had reached 597.7 million. More than one third of the exports go to Switzerland, most of the rest going to the other EFTA members and to the EEC countries. Much foreign currency also comes in from tourists and from the sale of stamps.

Because of the stable political situation, the absolute bank secrecy and the low fiscal charges, a number of foreign companies and holding corporations have settled in Liechtenstein. Such firms pay no tax on profit or income. Their normal tax rate is one-thousandth on paid-in capital and reserves with an annual minimum of 1,000 Swiss francs.

Transport and Communication

Good roads connect all the towns and villages and most transport is by road. A tunnel connects the Rhine and Samina valleys. There are 18.5 km. of railway track.

Social Welfare

Accident insurance has been obligatory since 1931, pensions and life insurance since 1954. Family allowances were introduced in 1957 and unemployment benefits in 1970. Sickness insurance was made compulsory in 1971.

Education

Basic instruction is given for five years at a primary school (*Volksschule*), after which a pupil may transfer to a lower secondary school for three years, a secondary school (*Realschule*) for four years, or to the *Liechtensteinisches Gymnasium* (grammar school) for eight years. There is no university. Many Liechtensteiners continue their studies at universities in Austria, the Federal Republic of Germany or Switzerland. Liechtenstein has a technical evening school, a music school, a school for mentally handicapped children and two schools for backward children.

THE CONSTITUTION

By the Constitution of October 5th, 1921, the monarchy is hereditary in the male line. The reigning Prince exercises the legislative right jointly with a Diet of fifteen members elected for four years by general and secret ballot. All male citizens of over 20 years have been eligible to vote since the voting age was lowered by a year in October 1969. The voters participate directly in the legislation by means of the initiative and the referendum.

In the case of adjournment or dissolution, the Diet is replaced by a National Committee consisting of the President of the Diet and four Deputies. The members of the Government are nominated by the Prince on the proposition of the Diet for four years.

By a Treaty made with Switzerland in 1923 Liechtenstein is incorporated in Swiss Customs territory, and uses Swiss currency, customs and postal administration.

LUXEMBOURG

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Grand Duchy of Luxembourg lies south-east of Belgium between France and the Federal Republic of Germany. The climate is temperate. French is the official language and is generally used for administrative purposes, while German is the written language of commerce and the press. The spoken language is Letzeburgish, a German-Moselle-Frankish dialect. Ninety-seven per cent of the population are Roman Catholic and just over 1 per cent Protestant. The national flag (proportions five by three) consists of three horizontal stripes—red, white and light blue. The capital is Luxembourg-Ville (Lützelburg).

Recent History

There has been a customs union between Luxembourg and Belgium since 1921, except for the period 1940 to 1944 when the Grand Duchy was occupied by Germany. In 1960 Luxembourg and Belgium joined with the Netherlands in the Benelux Economic Union. Luxembourg is a member of the EEC, of which Luxembourg-Ville is the second capital, and of the European Coal and Steel Community and of EURATOM. It has played a full part in the post-war moves toward European integration. In November 1964, Grand Duchess Charlotte abdicated after a reign of 45 years, and was succeeded by her son, Prince Jean. After the fall of the government in October 1968 Pierre Werner headed a coalition of the Parti Chrétien Social and the Parti Démocratique ("Liberals") from early 1969 until May 1974. In the general election of May 1974 the Parti Chrétien Social lost its political dominance for the first time since 1919, and in June a left-of-centre coalition between the Parti Ouvrier Socialiste and the Parti Démocratique was formed under Gaston Thorn, Minister for Foreign Affairs since 1969. The new coalition promised to introduce tax and social security reforms.

Government

Luxembourg is an hereditary and constitutional monarchy. Legislative power is exercised by the unicameral Chamber of Deputies, with 59 members elected by universal adult suffrage for five years (subject to dissolution). Some legislative functions are also entrusted to the advisory Council of State, with 21 members appointed by the Grand Duke, but the Council can be overridden by the Chamber.

Executive power is vested in the Grand Duke but is normally exercised by the Council of Ministers, led by the President of the Government. The Grand Duke appoints Ministers but they are responsible to the Chamber.

Luxembourg is divided into 12 cantons.

Defence

Luxembourg is a member of the Western European Union and since 1954 of the North Atlantic Treaty Organization. Compulsory military service was abolished in 1967, but Luxembourg maintains an army of volunteers totalling 625 and a gendarmerie numbering 430. The defence budget for 1977 was 1,047.9 million francs.

Economic Affairs

The country enjoys great prosperity due to the iron and steel industry; and the inhabitants have one of the highest levels of national income per head in the EEC. There is virtually full employment in Luxembourg. Large deposits of *minette* (iron ore) are found in the south-west. This ore, however, is insufficient to supply all the needs of industry and iron ore is also imported, as is the coal necessary for iron and steel manufacture. About 3.8 million tons of pig iron and about 4.6 million tons of crude steel were produced in 1976. Iron and steel comprise about 90 per cent of the Duchy's exports and about 40 per cent of the workforce is employed in the industry. Policy since 1960 has been aimed at diversification, although the iron and steel industry is still predominant, providing 16 per cent of the G.D.P. in 1975. The growth rate of the economy has been relatively slow owing to dependence upon the heavy steel and metallurgical industries. More dynamic sectors, such as the chemical industry and finance, are assuming greater importance as the predominance of steel decreases. In recent years many foreign banks have been established in Luxembourg.

Agriculture is a source of livelihood for 6 per cent of the population, providing 3.7 per cent of the G.D.P. in 1975. Barley, oats and potatoes are grown in the north, and wheat, fruit and grapes for wine in the south. Cattle-raising is well-developed.

Luxembourg has adequate foreign investment and is now giving priority to the expansion of existing companies. Industrial relations are harmonious, with strikes rare and statutory minimum wages established. In 1974 Luxembourg had a surplus of 12,160 million francs on trade in goods and services, but in 1975 there was a deficit of 4,353 million francs due to a slump in exports. Inflation increased from 2.3 per cent in 1969 to 10.1 per cent in the year to August 1976, but dropped to 6.2 per cent in the following 12 months.

Transport and Communications

The railway system covers 274 km. of which 137 km. are electrified. At the end of 1975 there were 4,950 km. of roads, of which 25 km. were motorway and 865 km. main roads. There is an airport near Luxembourg-Ville, served by Luxair, the national airline, and other international lines. The canalization of the Moselle has given Luxembourg direct access to Rhine shipping through the port of Mervort.

Social Welfare

Although virtually all types of employment are subject to compulsory social insurance, the Government does not itself operate the Social Services. They are administered by semi-public bodies, composed of Government representatives, and elected representatives of employers and employees. Social Service benefits are also guaranteed to foreigners in accordance with International Conventions signed with individual countries. The comprehensive social insurance scheme covers accident insurance (com-

LUXEMBOURG

pulsorily paid by all employers), health insurance (compulsory for employees and self-employed and voluntary for others), invalid and old age pensions (contributions shared equally between employer and employee, the self-employed also making a compulsory contribution), family allowances, and unemployment benefit, which amounts to 60 per cent of net earnings.

Education

Education in Luxembourg is compulsory from 6 to 15 years. German is the initial language of instruction at primary level. French is added to the programme in the second year and becomes increasingly important until it replaces German as the language of instruction at secondary level.

Pupils are selected for secondary school at the age of 12 on the basis of an entrance examination in French, German and arithmetic. The first year of secondary school is a general orientation course on comprehensive lines, which is then followed by a choice between two sections: the Classical Section with an emphasis on Latin, and the Modern Section which stresses modern languages.

The completed secondary course lasts seven years and leads to the *Diplôme de Fin d'Etudes Secondaires* which qualifies for University Entrance. For pupils who do not wish to attend Secondary School there are three-year supplementary intermediate courses leading to vocational or technical qualifications.

In 1969 a Centre Universitaire was created, offering courses in the humanities, sciences, law and education. Many students attend foreign universities, mainly in

France, the Federal Republic of Germany, Belgium or Switzerland.

Tourism

Luxembourg is famous for the beauty of its scenery. Many tourist resorts have grown up round the ruins of mediaeval castles such as Clerf, Esch/Sauer, Vianden and Wiltz. There are many footpaths and hiking trails. More tourists camp in Luxembourg than stay in hotels.

Sport

Football is the most popular game.

Public Holidays

1978: March 27th (Easter Monday), May 1st (Labour Day), May 4th (Ascension Day), May 15th (Whit Monday), June 23rd (Grand Duke's Official Birthday), August 15th (Assumption), September 3rd (Schobermess—Luxembourg Fair), November 1st (All Saints' Day), November 2nd (All Souls' Day), December 25th (Christmas Day), December 26th (Boxing Day).

1979: January 1st (New Year's Day).

Weights and Measures

The metric system is in force.

Currency and Exchange Rates

100 centimes = 1 Luxembourg franc (Belgian currency is also legal tender).

Exchange rates (October 1977):

1 Luxembourg franc = 1 Belgian franc;

£1 sterling = 62.60 francs;

U.S. \$1 = 35.25 francs.

100 centimes=1 Luxembourg franc (Belgian currency is also legal tender).

Coins: 25 and 50 centimes; 1, 5 and 10 Luxembourg francs.

Notes: 10, 20, 50 and 100 Luxembourg francs; 20, 50, 100, 500, 1,000 and 5,000 Belgian francs.

Exchange rates (October 1977): 1 Luxembourg franc=1 Belgian franc;

£1 sterling=62.60 francs; U.S. \$1=35.25 francs.

1,000 Luxembourg francs=£15.97=\$28.37.

Note: The Luxembourg franc is at par with the Belgian franc. From September 1949 to August 1971 the par value of the Luxembourg franc was 2 U.S. cents (U.S. \$1=50.00 francs). Between December 1971 and February 1973 the central exchange rate was \$1=44.82 Luxembourg francs. In terms of sterling, the exchange rate was £1=120.00 Luxembourg francs from November 1967 to August 1971; and £1=116.78 francs from December 1971 to June 1972. Since March 1973 the Luxembourg franc has been allowed to "float" against the U.S. dollar and sterling. For average rates, see the chapter on Belgium.

THE CONSTITUTION

THE Constitution now in force dates back to October 17th, 1868; but in 1919 a Constituent Assembly introduced into it some important changes, declaring that the sovereign power resided in the nation, that all secret treaties were denounced, and that deputies were to be elected, by *Scrutin de liste*, and by proportional representation, on the basis of complete universal suffrage. Electors must be citizens of Luxembourg, male or female, and must have attained eighteen years of age. Candidates for election must have attained twenty-one years of age. The Grand Duke chooses the Ministers, may intervene in legislative questions, and has certain judicial powers. There is a single-Chamber legislature, the Chamber of Deputies, with

59 members elected for five years. The number of deputies was enlarged to accord with the increase in population registered in the census of 1960. There are four electoral districts, the North, the Centre, the South and East. By the law of October 9th, 1956, the Constitution was further revised, by the following stipulation: "The exercise of prerogatives granted by the Constitution to the legislative, executive and judiciary powers, can, by treaty, be temporarily vested in institutions of international law." In addition to the Cabinet, Luxembourg has a Council of State, which is the supreme administrative tribunal and also fulfils certain legislative functions, comprising 21 members nominated by the Sovereign.

JUDICIAL SYSTEM

The lowest courts in Luxembourg are those of the *Justices of the Peace*, of which there are three. These are competent to deal with civil, commercial and criminal cases of minor importance. Above these are the two *District Courts*, Luxembourg being divided into two judicial districts. The highest court is the *Superior Court of Justice*, which acts both as a court of appeal, hearing decisions made by *District Courts*, and as a *Cour de Cassation*. Very serious criminal cases are heard by the *Court of Assizes*. Special tribunals exist to adjudicate upon various matters of social administration such as social insurance. The Department of the Attorney-General is responsible for the administration of the judiciary and the supervision of judicial police investigations.

Judges are appointed for life by the Grand Duke, and are not removable except by judicial sentence. The judicial system of the Grand Duchy does not employ the jury system. Capital punishment exists technically but is no longer used in practice.

MALTA

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Republic of Malta comprises a group of islands (mainly Malta, Gozo and Comino) in the central Mediterranean, 60 miles (97 km.) south of Sicily and 180 miles (290 km.) north of the African coast. The climate is warm, with average temperatures of 22.6°C (72.7°F) in summer and 13.7°C (56.6°F) in winter. Average annual rainfall is 22 inches (56 cm.). Maltese and English are the official languages though Italian is widely spoken. The state religion is Roman Catholicism. The national flag (proportions 3 by 2) consists of two equal vertical bands, white in the hoist and red in the fly. The George Cross, edged with red, figures in a canton of the white band. The capital is Valletta.

Recent History

After radical constitutional changes in 1947 and 1961, with an intervening period of internal restlessness, Malta passed from the almost total self-government it had obtained to the status of an independent sovereign state within the Commonwealth in September 1964. At the same time defence and financial aid agreements, effective over a ten-year period, were reached with the United Kingdom.

In June 1971 a Labour Government under Dom Mintoff came to power with socialist and nationalist aims, notably to consolidate Malta's independence and national sovereignty, to improve social conditions and to achieve economic viability. The first Maltese-born Governor-General was appointed in July. Pursuing a policy of non-alignment, the Government concluded agreements for cultural, economic and commercial co-operation with several East European countries, Italy, Libya, Tunisia, the U.S.S.R., the U.S.A., the People's Republic of China and others, and received technical assistance, notably from Libya.

On taking office the Labour Government declared invalid the 1970 agreement with the United Kingdom, which had resolved the question of aid to Malta. Mintoff proposed a new agreement which would safeguard Malta's sovereignty and ensure that the economy benefited from the foreign base. A new agreement was signed in March 1972, under which Malta receives £14 million sterling in rent annually until 1979, a further sum of £7 million (part grant, part soft loan) from the NATO countries, £2.5 million in aid from Italy and technical aid from other countries. In addition, to compensate for sterling devaluation, a sum of £800,000 was contributed by five NATO countries, excluding the United Kingdom. The size of the base and the freedom of movement allowed to Forces shipping were reduced, and the agreement included provisions that the base is to be used only by the United Kingdom for defending the United Kingdom and NATO, that it will never be used against an Arab country and that any redundancies among Maltese civilian employees must be agreed with the Malta Government. United Kingdom

service personnel are to be gradually withdrawn between 1977 and 1979, giving the Maltese economy time to adjust.

Malta's foreign policy is aimed at improving the country's standard of living and restructuring the economy so as to render unnecessary economic dependence on foreign military presence. Malta became a republic in December 1974. Sir Anthony Mamo, until then Governor-General, became President and Head of State.

A general election was held in September 1976. After a campaign in which the principal issue was foreign policy, the Labour Party was returned to power with a majority of three seats in the House of Representatives over the Nationalist Party led by Dr. Borg Olivier, indicating popular support for Dom Mintoff's policies of independence and non-alignment in foreign affairs and socialist reform at home. In December 1976 Sir Anthony Mamo was succeeded as President by Dr. Anton Buttigieg, a former Minister of Justice.

Government

Under the 1974 Constitution, legislative power is held by the unicameral House of Representatives, with 65 members elected by universal adult suffrage for five years (subject to dissolution), using proportional representation. The President is a constitutional Head of State, elected for a five-year term by the House, and executive power is exercised by the Cabinet. The President appoints the Prime Minister and, on the latter's recommendation, other Ministers. The Cabinet is responsible to the House.

Defence

The armed forces of Malta consist of a small regular unit and two para-military corps. Under present arrangements the United Kingdom's Royal Navy maintains a Marine Commando base on the island, and the Royal Air Force uses the civil airport at Luqa. Between 1977 and 1979 all foreign service personnel are to be gradually withdrawn.

Economic Affairs

The rundown in British defence expenditure in Malta set in motion as early as 1959 a process of economic restructuring to offset the loss of this long-established and principal component of the Maltese economy. The major sources of income have come to be light industry, tourism, the dockyard and agriculture. Local products now being exported include textiles and clothing, footwear, metal manufactures and plastics. New industries and building for the tourist trade have been encouraged by the Malta Development Corporation. Intensive efforts are being made to turn the island into a major transshipment centre by the development of a new harbour at Marsaxlokk Bay. Shipbuilding and shiprepairing are of prime importance since Malta is ideally situated in the centre of the Mediterranean. Since their nationalization in 1973, Malta Drydocks have been running profitably, receiving shipbuilding and repair orders worth £M11.6 million in 1975. Expansion is being carried out with Chinese, Libyan and Saudi Arabian

aid and includes the new Red China Dock, an increase in facilities for shipbuilding and the production of non-maritime heavy industrial equipment. Agricultural exports include potatoes, onions, tomatoes and flowers.

The Labour administration which assumed office in June 1971 took steps to revitalize the island's economic structure. Despite development planning the national debt had reached £M13 million by that time and the boom in foreign investment in real estate had come almost to a halt. The Government put a check on public borrowing, reordered the management of public finances and introduced wages and prices controls. By 1975 the G.N.P. at factor cost stood at £M171.2 million and rose to £M208.2 million in 1976. The balance of payments remained favourable despite world-wide price rises brought about by the oil crisis, with earnings from tourism and foreign investments covering a visible trade deficit. In 1976 there was a surplus of about £M27 million on Malta's current account, notwithstanding the trade gap which widened to £M82.3 million. In 1975 and 1976 Malta's rate of inflation remained comparatively low, restrained by the application of subsidies and price and profit controls. The increase in consumer prices was only 1.8 per cent over the twelve months to December 1975, rising to 4.6 per cent in the following year. Thereafter, however, retail prices rose more sharply, increasing by 9.6 per cent in the first six months of 1977.

As well as securing a four-fold increase in defence rents, Malta has also benefited recently by obtaining Libyan oil at a reduced price, enabling the development of factories and other projects, and by receiving in 1972 a six-year interest-free loan of £M16.9 million from China. In December 1975 a new trade agreement was concluded between Malta and its main trading partner, the EEC, incorporating a provision for a loan of £M13 million to be paid over five years. Malta's economic objectives were established in the 1973-80 development plan. Total investment needs over the plan period have been assessed at around £M213 million, of which £M94 million will be invested by the Government on infrastructure and social capital projects, as well as on direct productive activities.

During 1975 and 1976 Malta continued to make progress towards achieving economic independence by 1980. Revenue from the British base shrank from 35 per cent of Malta's total foreign exchange earnings in 1971 to 13.4 per cent in 1976. However, the world recession prevented the 1973-80 development plan from reaching its target in terms of reducing unemployment and increasing private investment.

Transport and Communications

There are 1,226 km. of surfaced and macadamized roads. All towns and villages are linked by frequent bus services. The international airport is at Luqa. The main harbour, Valletta, is used annually by over 3,000 vessels.

Social Welfare

Social Security is provided under the National Insurance Act, 1956, the National Assistance Act, 1956, and the Old

Age Pensions Act, 1948. The National Insurance Act provides for a comprehensive scheme of social insurance.

Other social welfare programmes include social work with families, care and protection of children and a probation service. These services are provided under different statutes and subsidiary legislation.

Education

Education is compulsory between 6 and 16, and is free in government schools and the university. Secondary education begins at the age of eleven, lasts five years and leads to the Ordinary Level of the British General Certificate of Education. However, after the third year, students can opt for craft courses of three or four years' duration in technical institutes and trade schools, some of which lead to City and Guilds of London certificates at craft level. Upper Secondary education provides two-year courses leading to the Advanced Level of the G.C.E. Further education is available at the University of Malta, the Malta College of Arts, Science and Technology, and the Malta College of Education. There are also a number of technical institutes and specialist schools. Kindergartens have been established for children under five.

Tourism

The island has climatic, scenic and historical assets. Excavations indicate the existence of an advanced culture dating from about 4000 B.C. There are fine beaches. Tourism continues to be a major source of Malta's income, rendering a net foreign exchange income of about £M12.6 million in 1976. Tourists come mainly from the United Kingdom, Italy, Germany, France, Benelux, Austria, Switzerland and Scandinavia, and efforts are being made to advertise more widely and to attract more visitors in winter. In 1976 339,537 tourists visited Malta.

Sport

Football is the most popular game.

Public Holidays

1978: March 24th (Good Friday), May 1st (May Day), August 15th (Assumption), December 13th (Republic Day), December 25th (Christmas Day)

1979: January 1st (New Year's Day).

Weights and Measures

The imperial system of weights and measures is being replaced by the metric system, metric linear measures were introduced in 1977, and metric units of volume and weight will be introduced in 1978 and 1979 respectively.

FINANCE

1,000 mils = 100 cents = 1 Maltese pound (£M).

Coins: 2, 3 and 5 mils; 1, 2, 5, 10, 25 and 50 cents.

Notes: 1, 5 and 10 Maltese pounds.

Exchange rates (October 1977): £1 sterling = 73.8 Maltese cents; U.S. \$1 = 41.5 Maltese cents.

£M100 = £135.57 sterling = \$241.14.

Note: Before December 1971 the Maltese pound was at par with the pound sterling. Between November 1967 and August 1971 the exchange rate was £M1 = U.S. \$2.40. From December 1971 to June 1972 the rates were £M1 = £1.025 sterling = \$2.671. Since the "floating" of sterling in June 1972 the value of the Maltese pound has been determined in relation to the currencies of the country's main trading partners. The average value of the Maltese pound was \$2.4569 in 1971; \$2.6095 in 1972; \$2.7232 in 1973; \$2.5947 in 1974; \$2.6202 in 1975; \$2.3534 in 1976.

THE CONSTITUTION

On December 13th, 1974, the Independence Constitution of 1964 was substantially amended and Malta became a democratic republic within the Commonwealth, founded on work and on respect for the fundamental rights and freedoms of the individual. The new constitution provided for the creation of the office of President of Malta to replace that of Governor-General.

The religion of the Maltese people is recognized to be the Roman Catholic Apostolic Religion and the Church Authorities have the constitutional right and duty to teach according to its principles. The religious teaching of the Roman Catholic Church is provided in all State schools as part of compulsory education.

The Constitution provides that the national language and the language of the Courts is Maltese but that both Maltese and English are official languages.

An independent Public Services Commission consisting of three to five members is appointed by the President on the advice of the Prime Minister to make recommendations to the Prime Minister concerning appointments to public office and the dismissal and disciplinary control of persons holding public office.

An Employment Commission, consisting of a chairman and four other members, the function of which is to ensure that in respect of employment no distinction, exclusion or preference that is not justifiable is made or given in favour of or against any person by reason of his political opinion, is also provided for.

The Judicature is independent.

Radio and television broadcasting is controlled by an independent authority.

DECLARATION OF PRINCIPLES

The Constitution upholds the right to work and to reasonable hours of work, the safe-guarding of rights of women workers, the encouragement of private economic

enterprise, the encouragement of co-operatives, the provision of free and compulsory primary education, and the provision of social assistance and insurance.

FUNDAMENTAL RIGHTS AND FREEDOMS OF THE INDIVIDUAL

The Constitution provides for the protection of the right to life, freedom from arbitrary arrest or detention, protection of freedom of conscience, protection from discrimination on the grounds of race, etc.

THE PRESIDENT

Under the Constitution the office of President becomes vacant after five years from the date of appointment made by resolution of the House of Representatives. He appoints the Prime Minister, choosing the Member of the House of Representatives whom he judges to be ablest to command the confidence of a majority of the Members, and on the advice of the Prime Minister he appoints the other Ministers, the Chief Justice, the Judges and the Attorney-General.

THE CABINET

The Cabinet consists of the Prime Minister and such number of other Ministers as recommended by the Prime Minister.

PARLIAMENT

The House of Representatives consists of such number of members, being an odd number and divisible by the number of divisions, as Parliament by law determines from time to time. At the moment this number is sixty-five. In future the electoral divisions are not to be fewer than nine and not more than fifteen, as Parliament may from time to time determine. The normal life of the House of Representatives is five years, after which a general election is held. Election is by universal adult suffrage on the principle of proportional representation. The age of majority is eighteen years.

MONACO

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag

The Principality of Monaco lies on France's south-eastern Mediterranean coast. The climate is fine and warm with very mild winters. The official language is French but Monégasque (a mixture of French and Italian), Italian and English are also spoken. Most of the population are Roman Catholics. The national flag (proportions officially 5 by 4) has two horizontal stripes of red and white.

History

The Principality has existed since the tenth century. It was abolished during the French Revolution but re-established in 1814. Since 1861 it has been an enclave of France. Prince Albert, great-grandfather of the reigning sovereign, Prince Rainier III, promulgated a constitution in 1911. A new constitution was introduced in 1962, granting more power to the elected National Council and renouncing the principle of divine right.

Government

Legislative power is exercised by the Prince and the National Council, which consists of eighteen members elected for a term of five years by universal suffrage. Executive power is vested in the hereditary Prince and the four-member Council of Government, headed by a Minister of State. The Prince represents the principality in its relations with foreign powers, and signs and ratifies treaties.

Economic Affairs

Revenue is derived mainly from transactional laws, the sale of tobacco and postage stamps, and tourism. Nationals of Monaco do not pay taxes. In 1972 France paid the Principality an indemnity of 12.3 million francs in lieu of Monégasque customs rights.

Tourism

The pleasant climate and the amenities of Monte Carlo, including the world famous Casino, have made Monaco a leading centre for tourism both in summer and winter. In 1976, 181,023 tourists visited Monaco.

Public Holidays

1978: March 27th (Easter Monday), May 1st (Fête du Travail), May 15th (Whit Monday), August 15th (Assumption), November 19th (National Day), December 25th, 26th (Christmas).

1979: January 1st (New Year's Day), January 27th (St. Devote, Patron Saint of the Principality).

Weights and Measures

The metric system is in force.

Currency and Exchange Rates

French currency: 100 centimes = 1 franc.

Exchange rates (October 1977):

£1 sterling = 8.595 francs;

U.S. \$1 = 4.835 francs.

Education (1975-76): 3,573 pupils in state schools, 1,356 in private schools.

THE CONSTITUTION

The Constitution of January 7th, 1911 (modified in November 1917), provided for a National Council elected by a panel of 30 members composed of delegates of the municipality, and 21 electors appointed by universal suffrage. The legislative power was exercised by the Prince and the National Council, which contained 18 members elected for five years. The executive government was exercised, under the authority of the Sovereign, by the Minister of State, assisted by the three members of the Council of Government.

On December 17th, 1962, a new Constitution was promulgated by Prince Rainier. Any future amendments to this may be made only with the approval of the elected National Council. The text maintains the traditional hereditary monarchy though the principle of divine right is renounced. The right of association, trade union freedom and the right to strike are guaranteed. The Supreme Tribunal safeguards fundamental liberties. The National Council is to be elected by direct universal suffrage. The Constitution also bestows the franchise on women.

THE NETHERLANDS

INTRODUCTORY SURVEY

Location, Climate, Language, Religion, Flag, Capital

The Kingdom of the Netherlands is situated in Western Europe, bounded to the east by the Federal Republic of Germany and to the south by Belgium. Its northern and western shores are washed by the North Sea. The climate is temperate. The language is Dutch. About 30 per cent of the population is Protestant, 40 per cent is Roman Catholic and 26 per cent does not profess any religion. The national flag (proportions three by two) carries three horizontal bands of red, white and blue. The capital is Amsterdam, but the seat of government is The Hague.

Recent History

The Netherlands was occupied by Germany during the Second World War. Following its liberation in 1945 it chose to abandon a traditional policy of neutrality, subsequently becoming a member of WEU and NATO. The Treaty establishing the Benelux Economic Union between the Netherlands, Belgium and Luxembourg was signed in 1958 and came into force in 1960. The Dutch are among the strongest supporters of European integration, and the Netherlands is a founder member of the EEC. Indonesia, formerly part of the Dutch East Indies, was granted independence in 1949, and in 1963 was given responsibility for Dutch New Guinea. The Netherlands granted independence to Surinam in 1975 and the country's only remaining dependency is the Netherlands Antilles.

The country was ruled by Catholic/Socialist coalition Governments from 1945 to 1959, by a Catholic/Protestant coalition from 1959 to 1965, and by a general coalition in the years 1965 and 1966. Piet de Jong's Catholic/Protestant/Liberal coalition Government took office in April 1967, and despite the various religious and political views reflected in its composition maintained a stability beneficial to the country's economy. After the general election in April 1971, which produced a swing to the left, the new Socialist party joined the coalition Government formed in July by Barend Biesheuvel. The coalition broke down in July 1972 after two ministers resigned, leaving the Government without a workable majority in the Second Chamber. The results of elections held in the following November marked a major setback for the "confessional" parties, reducing their combined number of seats in the new Lower House from 58 to 48. It was not until May 1973 that a new Government was formed by a left-of-centre coalition of three "progressive" parties (the Labour Party, the Radical Political Party and the Democrats '66) and two "confessional" parties (the Catholic People's Party and the Anti-Revolutionary Party) under Joop den Uyl, Chairman of the Labour Party parliamentary group in the Second Chamber.

This administration made progress towards its principal aim of redistribution of wealth by modifying the fiscal structure and by guaranteeing minimum wage levels for all adult workers. It took a cooler attitude to the EEC's Regional Fund policy and, despite NATO opposition, reduced defence expenditure with a view to tackling more immediate domestic problems.

In 1976 the alleged involvement of Prince Bernhard,

husband of Queen Juliana, in corrupt practices connected with the sale of Lockheed aircraft to the Dutch Air Force, brought about a constitutional crisis which threatened to lead to the Queen's abdication and caused the Prince himself to resign from all public offices.

The coalition led by Joop den Uyl collapsed in March 1977 after disagreement over land reform legislation. The general election held in May resulted in a concentration of votes among the larger parties. The election took place in an atmosphere of tension created by the seizure of a school and a train in northern Holland by South Moluccans, who were trying to force the Government to free fellow Moluccans jailed after a similar seizure in 1975. The South Moluccans ultimately wish to secure an independent republic in their original home, the former Dutch East Indian islands now under Indonesian rule.

Talks aimed at forming a new left-of-centre coalition between the Labour Party, the Christian Democratic Appeal—an alliance of "confessional" parties—and the Democrats '66 broke down several times over the following issues: a controversial profit-sharing scheme, abortion law reform and the distribution of Ministerial portfolios. The Cabinet remained in office in a caretaker role until December, when Andries van Agt, the former Deputy Prime Minister, formed a centre-right coalition government between the Christian Democratic Appeal and the People's Party for Freedom and Democracy.

Government

The Netherlands is a constitutional and hereditary monarchy. Legislative power is held by the bicameral States-General. The First Chamber has 75 members indirectly elected for six years (half retiring every three years) by members of the 11 Provincial Councils. The Second Chamber has 150 members directly elected by universal adult suffrage for four years (subject to dissolution), using proportional representation. The Head of State has mainly formal prerogatives and executive power is exercised by the Council of Ministers, led by the Prime Minister, which is responsible to the States-General. Each of the 11 provinces is administered by an appointed Governor and an elected Council.

Defence

The Netherlands is a member of NATO. Military service is compulsory between the ages of 20 and 35 for a period of between 14 and 21 months. Total strength of the armed forces is 109,700, comprising army 75,000, navy 17,000, air force 17,700. Defence estimates for 1977 totalled 8,366 million guilders.

Economic Affairs

Since the war the Netherlands has industrialized rapidly and agriculture has been mechanized and developed. The agricultural labour force has dropped from 20 to 7 per cent of the total labour force since 1947. Despite high population density there is a surplus of agricultural produce made possible by land reclamation, intensive scientific cultivation and co-operative crop distribution. Seed crops, bulbs,

NETHERLANDS

Introductory Survey

horticultural and dairy products account for one-quarter of exports.

About 37 per cent of the working population is employed in industry which, because of the shortage of home-produced raw materials, is mainly processive. The Netherlands' most rapidly expanding industries are oil and gas production, chemicals, and metallurgy. Industrial output includes steel, metals, transport equipment, chemicals, oil, radios, textiles and ships. Foodstuffs are also important. The Netherlands has always been a major trading country and its principal exports are energy, foodstuffs, machinery and chemicals. Major trading partners are Federal Germany, France, Belgium/Luxembourg and the U.K. Amsterdam is the centre for the trade in tobacco, diamonds, precious metals and art treasures. Oil and natural gas fields under territorial waters are being explored, while reserves of the latter are already being exploited.

Like other EEC countries, the Netherlands has been experiencing inflation. The average annual increase in consumer prices over the period 1971-73 was 8 per cent, rising to 10.7 per cent in the year to August 1975. The rate fell to 8.3 per cent in the next 12 months. The recession in the Netherlands reached its lowest point during 1975 with the real G.N.P. falling by 2 per cent, but by the end of that year there were signs of recovery and industrial production was expected to rise by about 3.5 per cent in 1977. Unemployment, however, remained high, at around 5.7 per cent of the labour force in the first six months of 1977. The trade surplus exceeded U.S. \$1,000 million in both 1975 and 1976. The balance of payments surplus on current account was expected to reach 5,500 million guilders in 1977.

Although inflation is being successfully contained, unemployment is expected to rise in 1978, and industrial investment to grow at a slower rate. The caretaker Government's failure to reduce unemployment is partly attributed to declining exports; in 1977 the Economics Ministry announced major export aid initiatives.

The trade unions have agreed to accept wage restraints but insist on additional government expenditure to create jobs and continued spending in the public sector. The Dutch capital and money markets have imposed credit controls in an effort to curb the sharp growth of consumer spending.

Transport and Communications

A third of all freight is carried on inland waterways, of which there are 5,587 km. There are 2,832 km. of state-operated railways providing mainly passenger services. The Netherlands is one of the world's leading shipping countries. In 1977 the merchant marine had 591 ships. The Rotterdam complex, incorporating the Europoort for mammoth tankers, is the main port of the EEC, and also the busiest port in the world. It handled some 279 million tons of traffic in 1975, and further development is planned. Royal Dutch Airlines (KLM) is the world's oldest commercial airline. Schiphol, Amsterdam's airport, handles about 300,000 tons of freight and 8 million passengers a year. There are 86,345 km. of roads in the Netherlands, of which some 1,800 km. are motorways.

Social Welfare

There are four general National Insurance acts covering old age pensions, widows' and orphans' pensions, children's

allowances, and special sickness expenses. A further four acts, applicable specifically to workers, cover health insurance, working incapacity insurance, unemployment benefits, and family allowances. The 1967 Health Insurance Act covered incapacity to work for up to one year, regardless of cause. After this time, compensation is paid (at 80 per cent of the previous income) according to the Working Incapacity Act of 1967. Health insurance is compulsory for wage earners, and voluntary for non-wage earners with low incomes. Contributions are made jointly by employer and employee.

Education

There are two types of school in the Netherlands: (1) public schools maintained sometimes by the state, but more frequently by municipalities and attended by about 30 per cent of all school children; (2) private schools which are for the most part denominational and are attended by 70 per cent of the school-going population; they are subsidized by the State often up to 100 per cent. Schools are administered by school boards, responsible to the local authorities or to the private organizations that run them, thus providing teachers with considerable freedom. The Minister of Education and Science is responsible for educational legislation and its enforcement. In matters of general education he is advised by an *Education Council* made up of university representatives.

Education is compulsory in the Netherlands from 7 to 15. The primary school course lasts six years and is followed by various types of secondary education. (1) *Pre-University Schools* provide various six-year courses that prepare pupils for university education: (a) *The Gymnasium* teaches Latin and Greek. In their final two years pupils are divided into A classes specializing in classics and B classes specializing in mathematics and science; (b) *The Athenaeum* does not teach classics. In their final three years pupils are divided into A sections specializing in economic and social sciences and B sections specializing in mathematics and science; (c) *The Lyceum* combines the above two types of school on comprehensive lines. (2) *General Secondary Education* comprises higher, middle and lower secondary schools, providing 5, 3-4 and 2-year courses respectively. It does not prepare for university, though middle and higher secondary schools may be followed by section courses at pre-university schools. Lower secondary schools are replacing the two-year continued primary schools and are now generally being incorporated into lower vocational training schools. (3) *Vocational Schools* are run on similar lines to the general secondary schools and provide courses in all aspects of secondary and higher technological education. There are nine universities, three technical universities and four other colleges of university standing.

Tourism

The chief attractions are the out-lying islands, the old towns, the canals, the cultivated fields of spring flowers, the art galleries and modern architecture. In 1975 about 2,600,000 tourists visited the Netherlands.

Visas are not required for nationals of the following countries: Austria, Belgium, Denmark, Finland, France, Germany (Federal Republic), Greece, Ireland, Italy, Luxembourg, Norway, Portugal, Spain, Sweden, Switzerland, United Kingdom.

100 cents = 1 Netherlands gulden (guilder) or florin.

Coins: 1, 5, 10 and 25 cents; 1, 2.50 and 10 guilders.

Notes: 1, 2½, 5, 10, 25, 100 and 1,000 guilders.

Exchange rates (October 1977): £1 sterling = 4.31 guilders; U.S. \$1 = 2.43 guilders.

100 Netherlands guilders = £23.19 = \$41.22.

Note: Between March 1961 and May 1971 the central exchange rate was U.S. \$1 = 3.62 guilders (1 guilder = 27.62 U.S. cents). From December 1971 to February 1973 the rate was \$1 = 3.2447 guilders (1 guilder = 30.82 U.S. cents). In terms of sterling, the central rate was £1 = 8.688 guilders from November 1967 to May 1971; and £1 = 8.455 guilders from December 1971 to June 1972. Since March 1973 the guilder has been allowed to "float" against the U.S. dollar and sterling. The average exchange rate (guilders per U.S. dollar) was: 2.796 in 1973; 2.689 in 1974; 2.529 in 1975; 2.644 in 1976.

THE CONSTITUTION

THE NETHERLANDS KINGDOM

Under the Constitution the State (the Kingdom) of the Netherlands consists of territories in Europe (the Realm in Europe of the Netherlands) and the overseas territory of the Netherlands Antilles (Surinam, formerly an overseas territory of the Netherlands, gained independence in November 1975). Under the Statute of the Realm signed by Queen Juliana in 1945, the Netherlands, Surinam and the Netherlands Antilles were constituted as a single realm under the House of Orange, thereby ending the former colonial status of Surinam and the Netherlands Antilles.

THE MONARCHY

The Netherlands is a kingdom with responsible and popular government. The Constitution regulates the succession and regency in great detail. When no heir exists, the last Sovereign and a Joint Assembly of the States-General (of a size augmented to double the usual numbers) shall designate the successor, and the Joint Assembly shall act of itself if the Sovereign previously dies. The Council of State shall assume the powers of the Sovereign until such time as an heir shall have been appointed. Normally the succession is in the direct male line or, failing a male, in direct female line. The age of majority of the Sovereign is 18.

ELECTORAL SYSTEM

All citizens over 18 are eligible to vote.

The Parliamentary Assemblies are called the States-General and consist of two Chambers, a First and a Second Chamber. The Second Chamber is composed of 150 members, and is elected for four years on a system of Proportional Representation. The First Chamber is composed of 75 members, elected, since 1848, by the Provincial Councils for a term of six years, one-half retiring every three years. All Netherlands who have reached the age of 25 are eligible for election to the States-General.

MINISTERIAL RESPONSIBILITY

For all the political actions of the King the ministers are responsible to the States-General. Consequently the power of the Crown (i.e. the King and ministers) to dissolve either or both Chambers is ultimately subject to the judgment of public opinion as interpreted by the States-General and the Cabinet itself. A revision of the Constitution in 1922 made the right of the King to declare war and conclude international agreements (treaties, etc.), dependent upon prior parliamentary sanction. New clauses laying down the conditions under which sovereign powers may be transferred to international organizations, and acknow-

ledging the supremacy of international law, have recently been included in the Constitution.

The Constitution says nothing about a Prime Minister or a Cabinet: it merely declares that the King establishes ministerial departments, and appoints and dismisses the ministers. Democratic development has enforced upon the Crown the principle that the King shall appoint a Cabinet through the choice of a Cabinet-former, who usually, though not necessarily, will have a majority in Parliament.

Ministers have the right to speak in both Chambers, but not to vote. They are submitted to the questioning and criticism customary in democratic legislatures. The States-General has one ordinary session annually, which normally lasts the whole year, and the King, through the Cabinet, can call others. Legislative power is in the joint authority of the States-General and the Crown (i.e. King and Ministers). The two Chambers must agree on legislation, but while the First Chamber has a power of acceptance or rejection, only the Second Chamber has the power of amendment. The budget, like all common laws, is first presented in the Second Chamber. Revision of the Constitution is possible after two readings in Parliament, and a two-thirds majority on the second reading.

THE COUNCIL OF STATE

There is a Council of State, presided over and appointed by the Sovereign, usually from notable personages, and the Cabinet and King consult this body on legislative and administrative policy, and upon the issue of decrees. The Council is also the highest Court of Appeal in administrative disputes.

LOCAL GOVERNMENT

The Netherlands consists of eleven provinces. The administrative organs are the Provincial States, the "Deputy States" and the Governor of the province. The Provincial States—directly elected, as is the Second Chamber, on a basis of proportional representation—form as it were the Parliament of the provinces. From its members each elects a college of Deputy States to act as Executive Committee of the province. The Governor is the representative of the Crown in the province and is appointed, as well as discharged by the Crown. He is Chairman of the Provincial and Deputy States. By virtue of the Constitution, the Provincial States have the right of making their own decisions on measures in the interest of the province.

The municipalities (about one thousand in number)—each governed by a burgomaster (also appointed by the Crown), assisted by aldermen (chosen from and by the Council) and the Council elected by the local inhabitants—have the right to make local regulations.
